

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

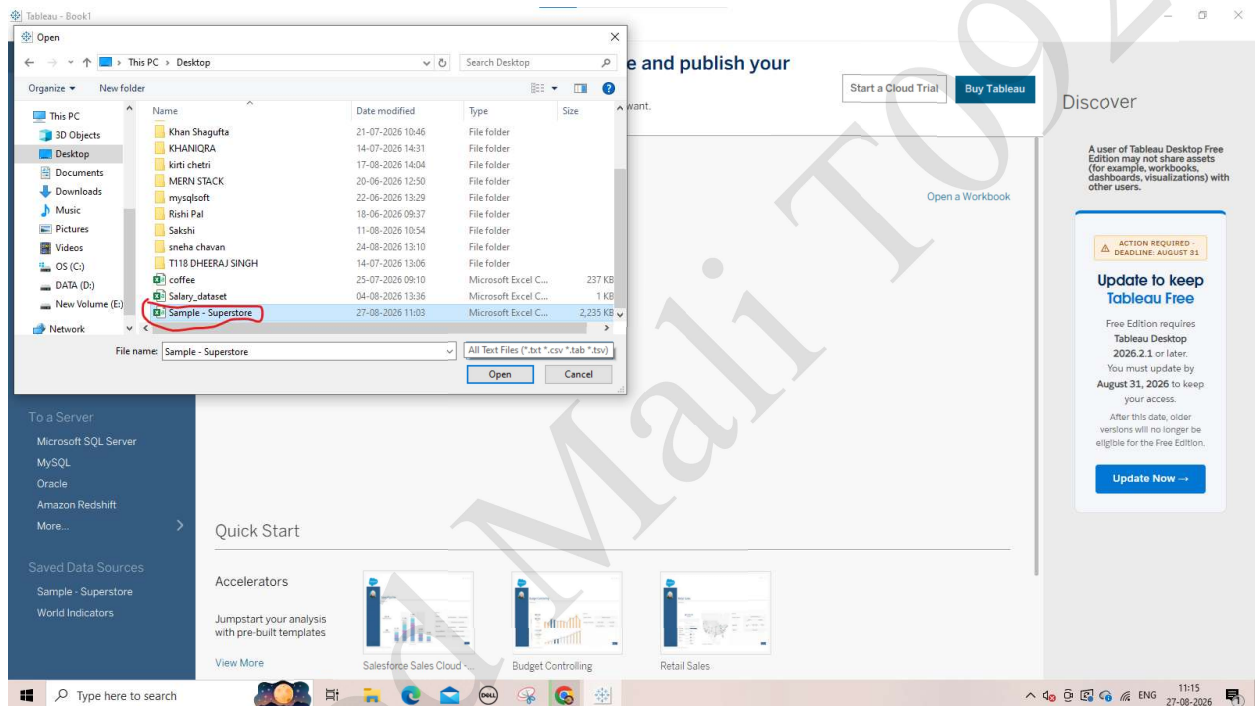

Aim :- Implementing Advanced Visualization Techniques and Customizations.

A: Create Slope Charts and Lollipop Charts

1. Create a Slope Chart (Year-over-Year Progression)

Step 1: Set Up the Base Worksheet

1. Open Tableau Desktop connected to Superstore.csv.

2. Create a new worksheet and rename it: Slope Chart.

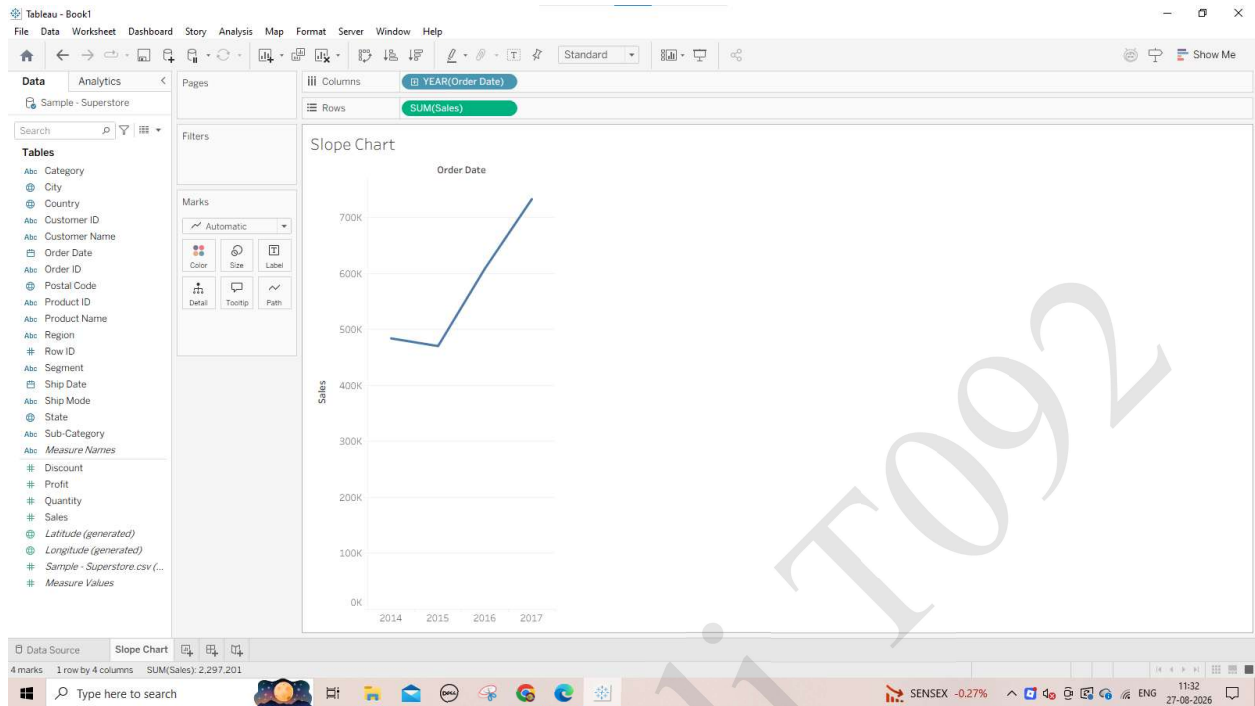

3. Drag Order Date to the Columns shelf. (It will appear as YEAR(Order Date)).

4. Drag Sales to the Rows shelf (appears as SUM(Sales)).

Name :- Vinod Manohar Mali

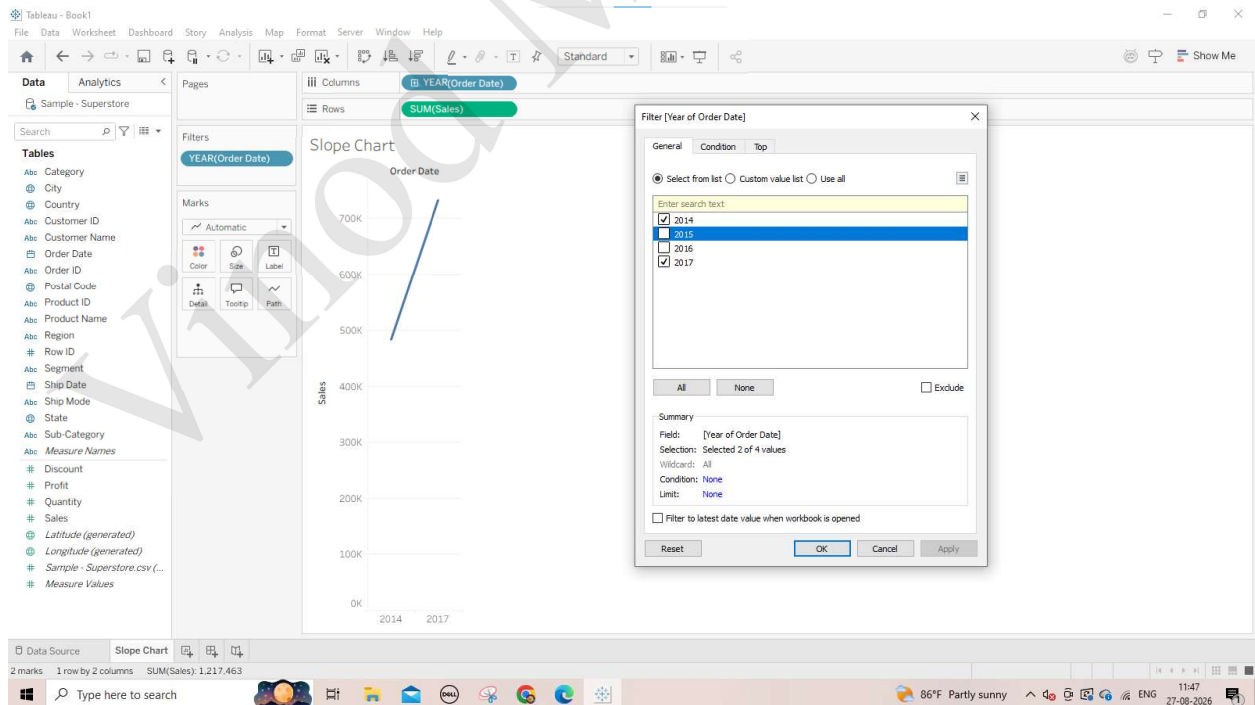

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 2: Filter to Baseline & Comparison Years

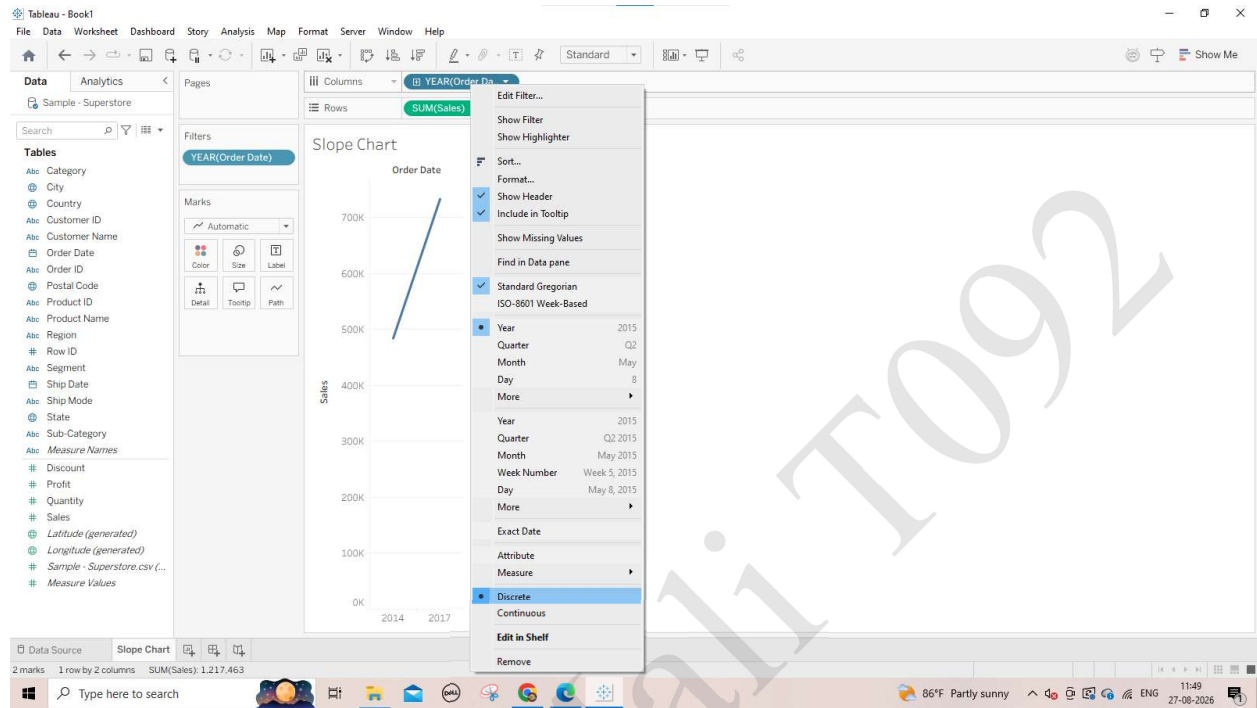

- 1. Hold Ctrl (or Cmd on Mac), drag Order Date to the Filters shelf, select Years, and click Next.**
- 2. Check only the first year (2014) and the last year (2017). Click OK.**

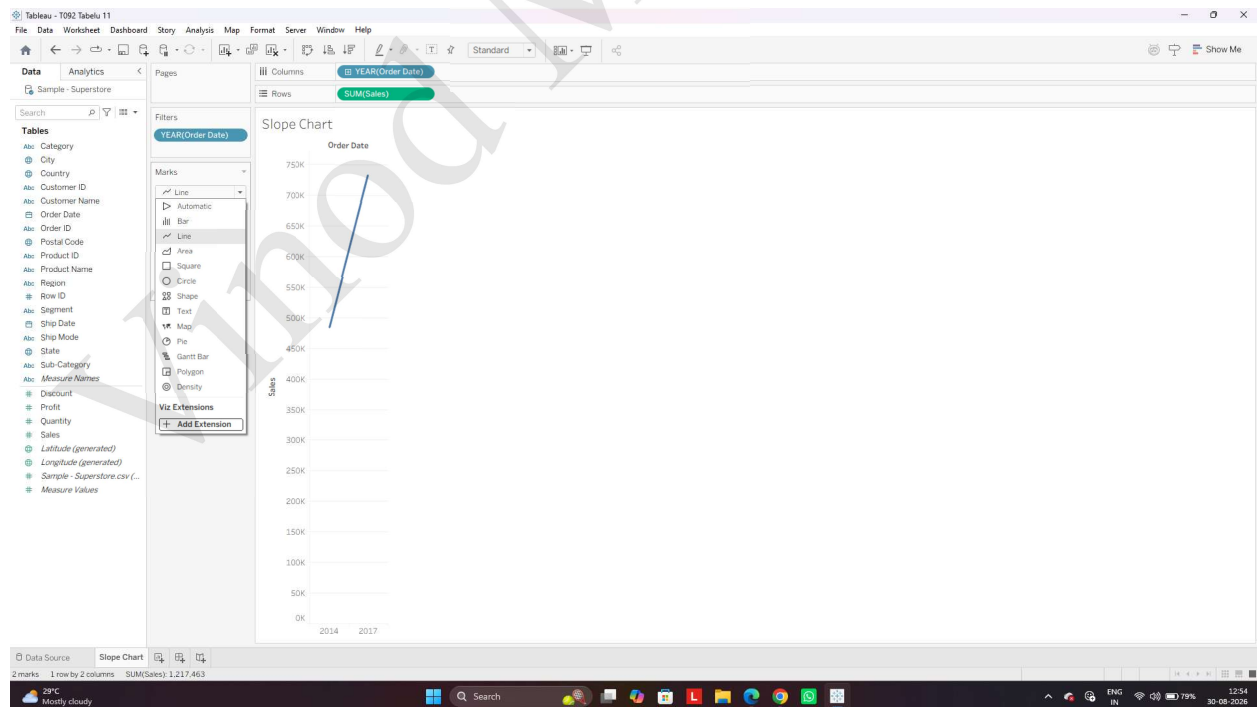

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

3. Right-click on the YEAR(Order Date) pill on the Columns shelf --> select Discrete (blue pill) so it acts as two distinct category pillars.

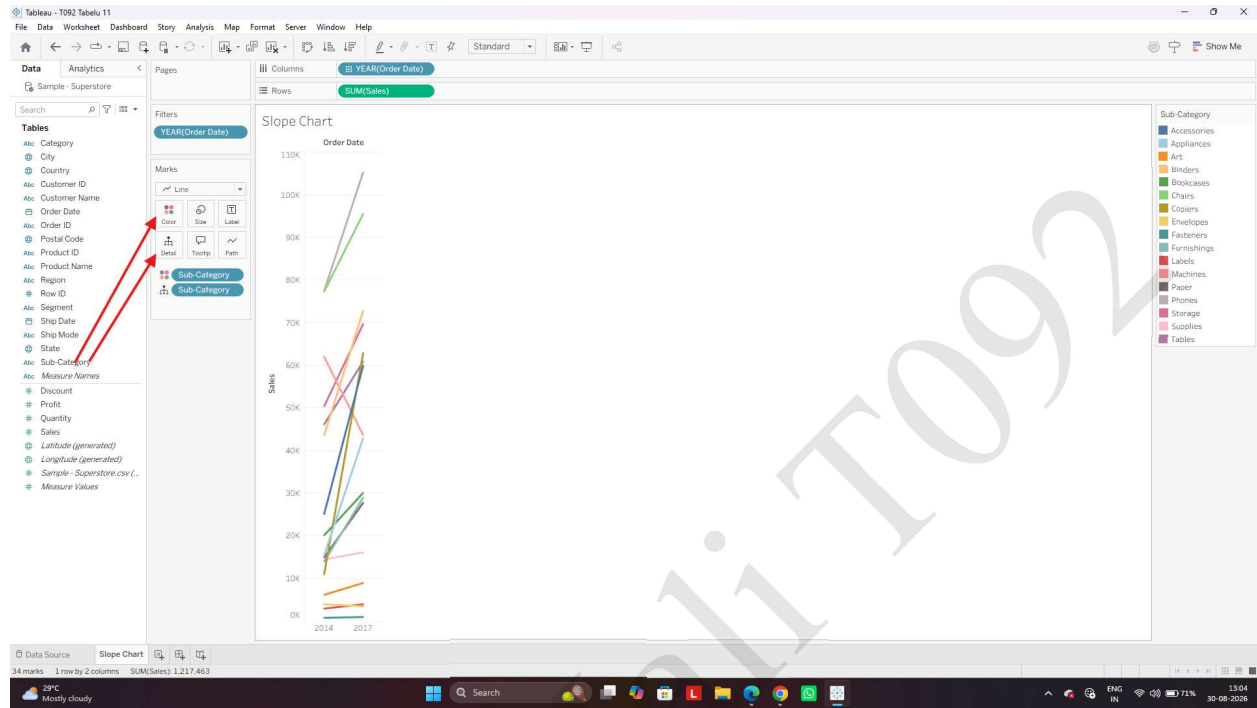

Step 3: Disaggregate by Sub-Category 1. On the Marks card, change the mark type dropdown from Automatic to Line.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Drag Sub-Category onto the Detail tile (and onto the Color tile) on the Marks card.

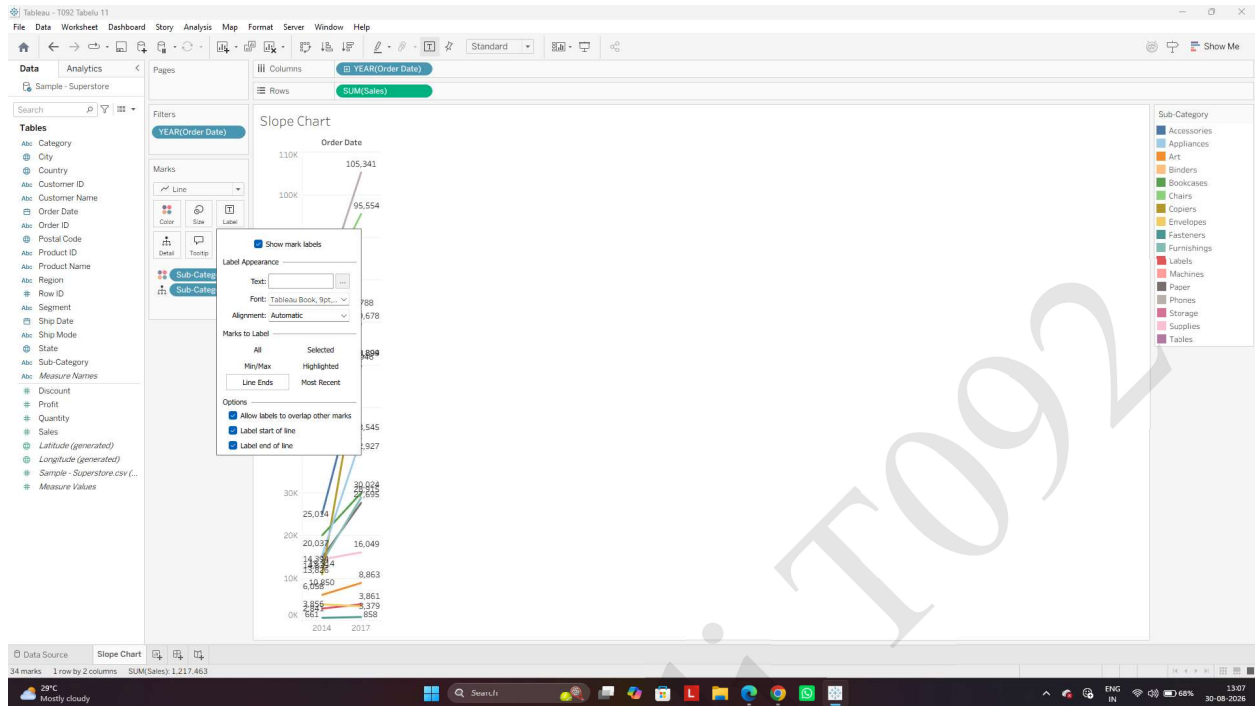

3. You will now see 17 distinct sloping lines connecting 2014 to 2017.

Step 4: Format Labels and Endpoints

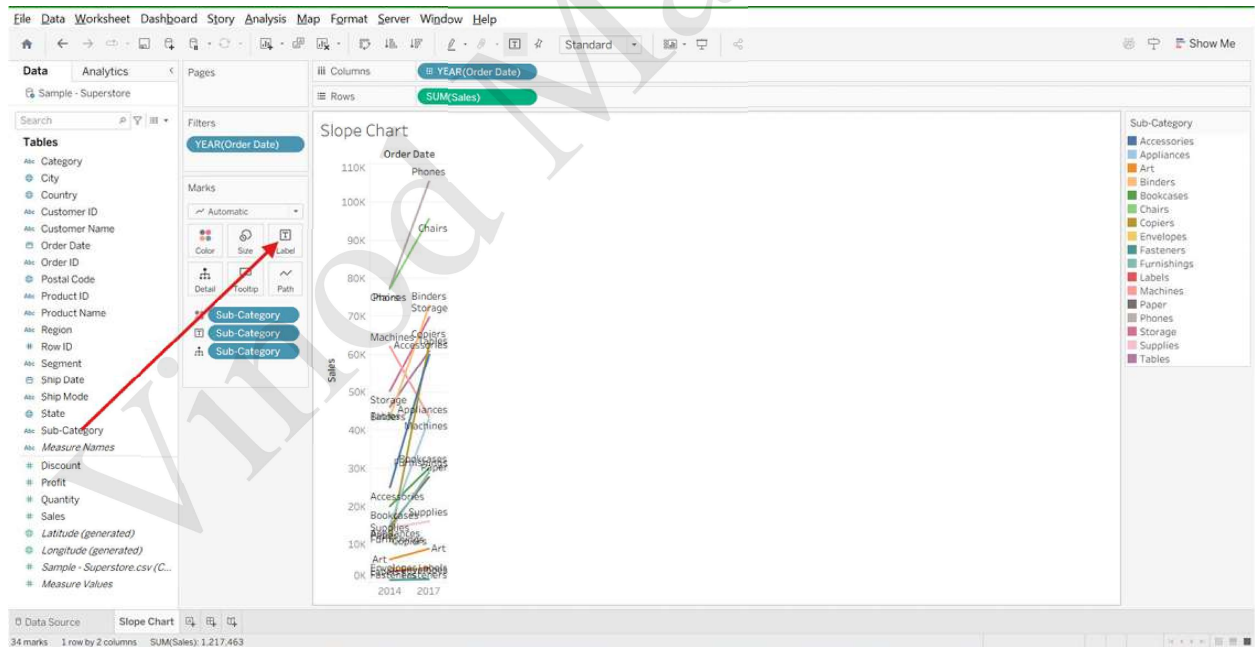

- 1. On the Marks card, click the Label tile:**
 - o Check Show mark labels.
 - o Under Marks to Label, choose Line Ends.
 - o Check Label start of line and Label end of line.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Drag Sub-Category onto Label on the Marks card to display the product name directly at the line endpoints.

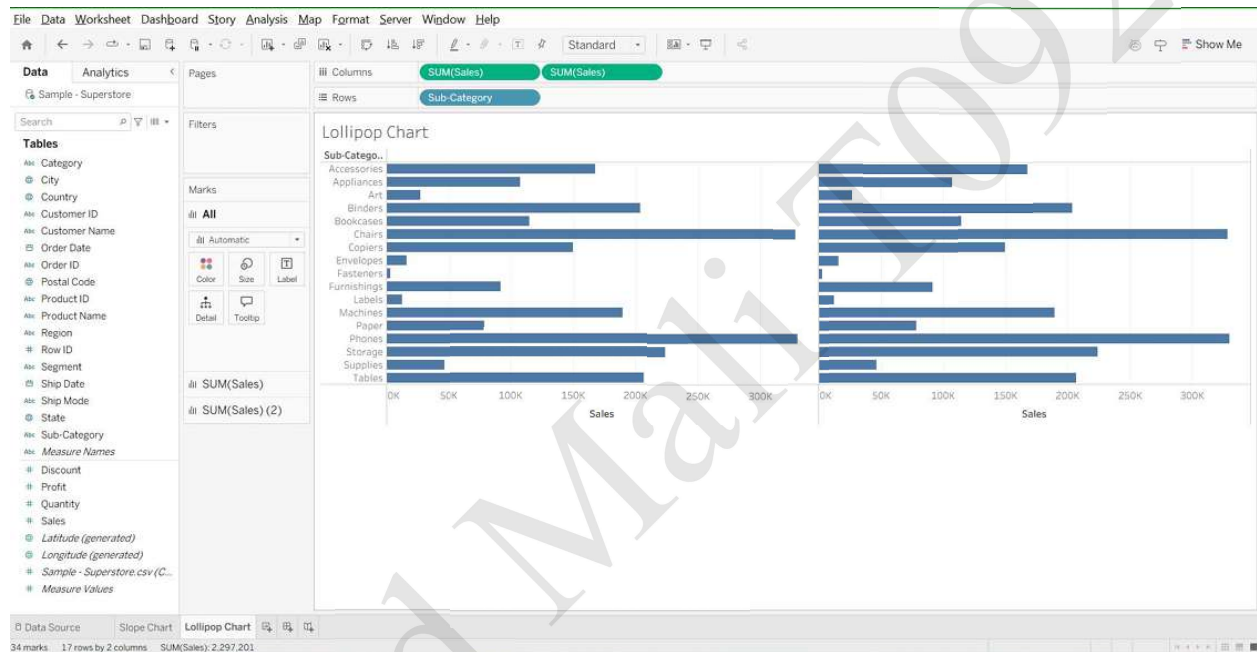

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Create a Lollipop Chart (Sales with Profit Highlighting)

Step 1: Set Up the Base Worksheet

- 1. Create a new worksheet and rename it: Lollipop Chart.**
- 2. Drag Sub-Category onto the Rows shelf.**
- 3. Drag Sales onto the Columns shelf.**
- 4. Drag Sales onto the Columns shelf a second time (creating two adjacent SUM(Sales) pills on Columns).**

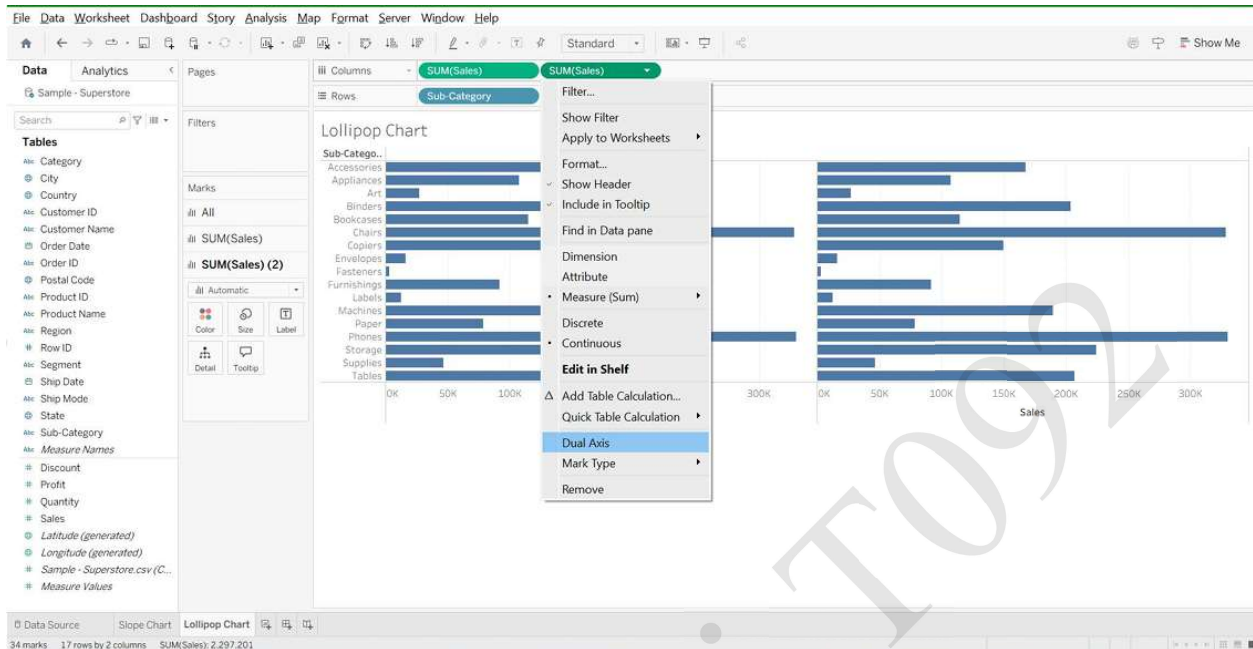

Step 2: Convert to Dual Axis

- 1. Right-click the second SUM(Sales) pill on the Columns shelf --> select Dual Axis.**

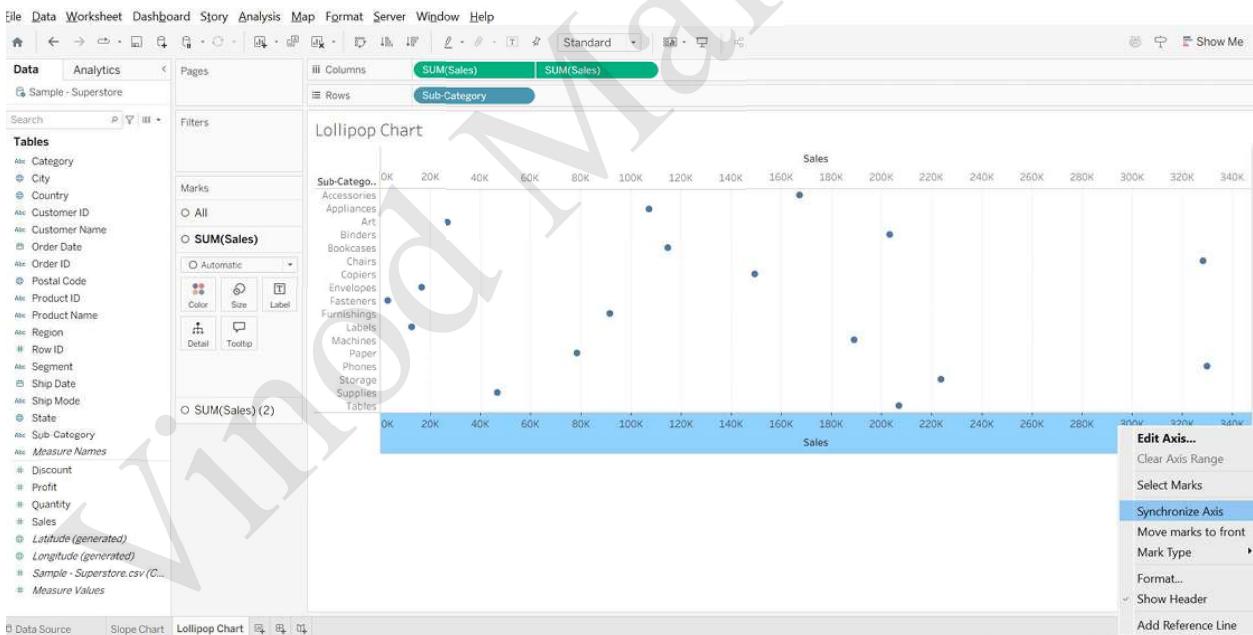

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Right-click the top numerical axis in the visualization view --> select Synchronize Axis (crucial to ensure both axes align).

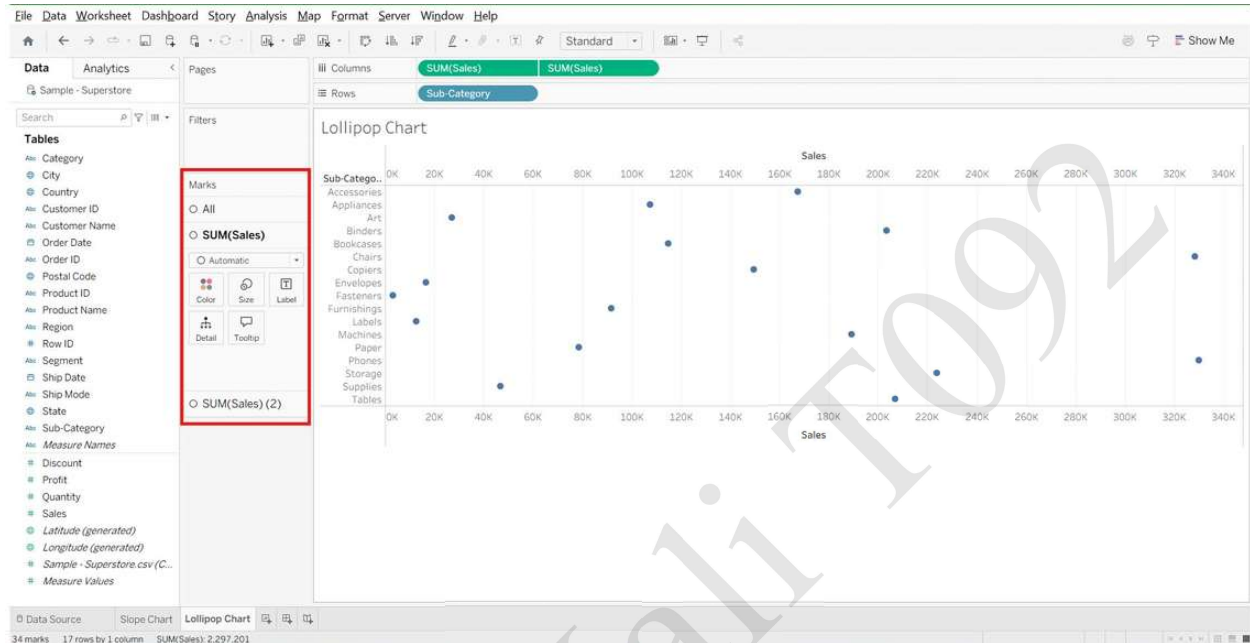

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 3: Configure the Marks Cards

In the Marks pane on the left, you will now see three cards: All, SUM(Sales) (first mark), and SUM(Sales) (2) (second mark).

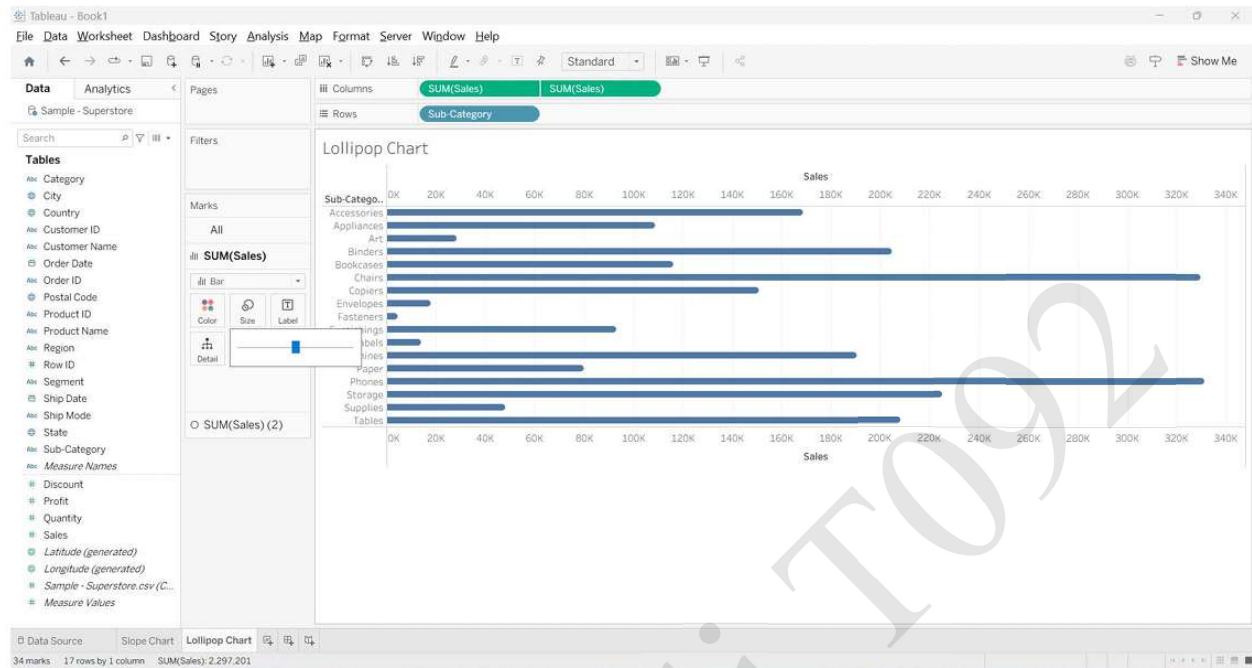

1. Configure the Stem (Bar):

- o Click on the first SUM(Sales) mark card.
- o Change the mark type dropdown to Bar.
- o Click the Size tile --> pull the slider down until the bars become thin, elegant stems.

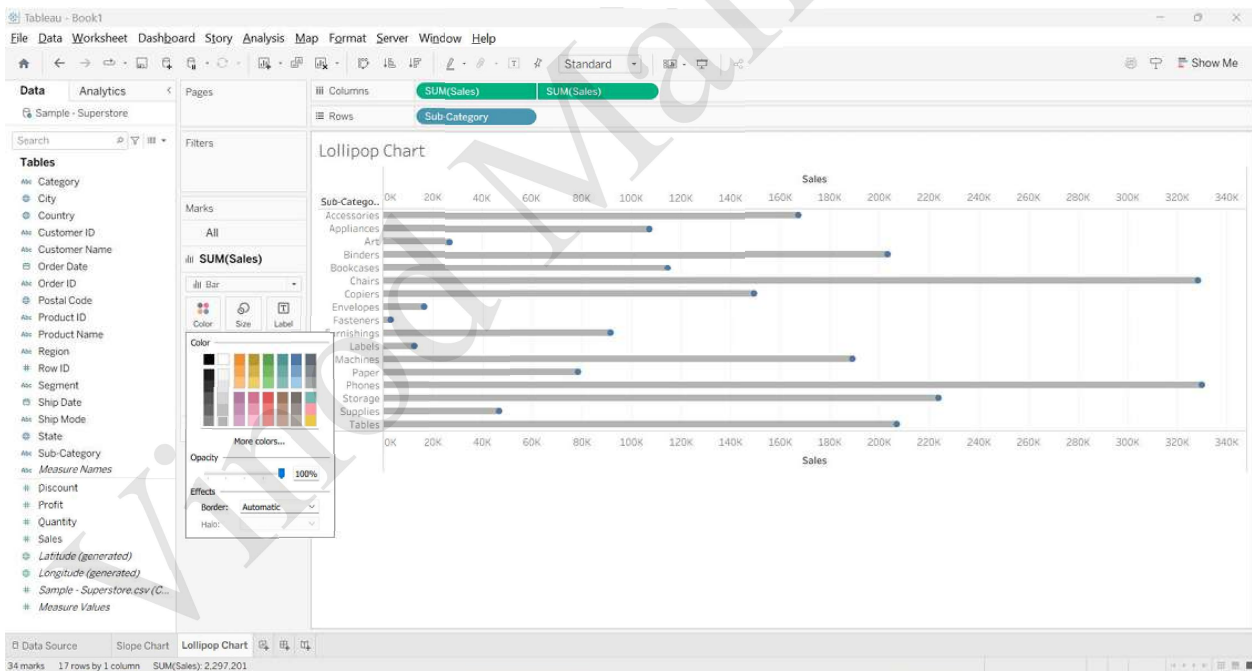

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

o Click Color --> set the bar color to a neutral gray (e.g., #B0B0B0).

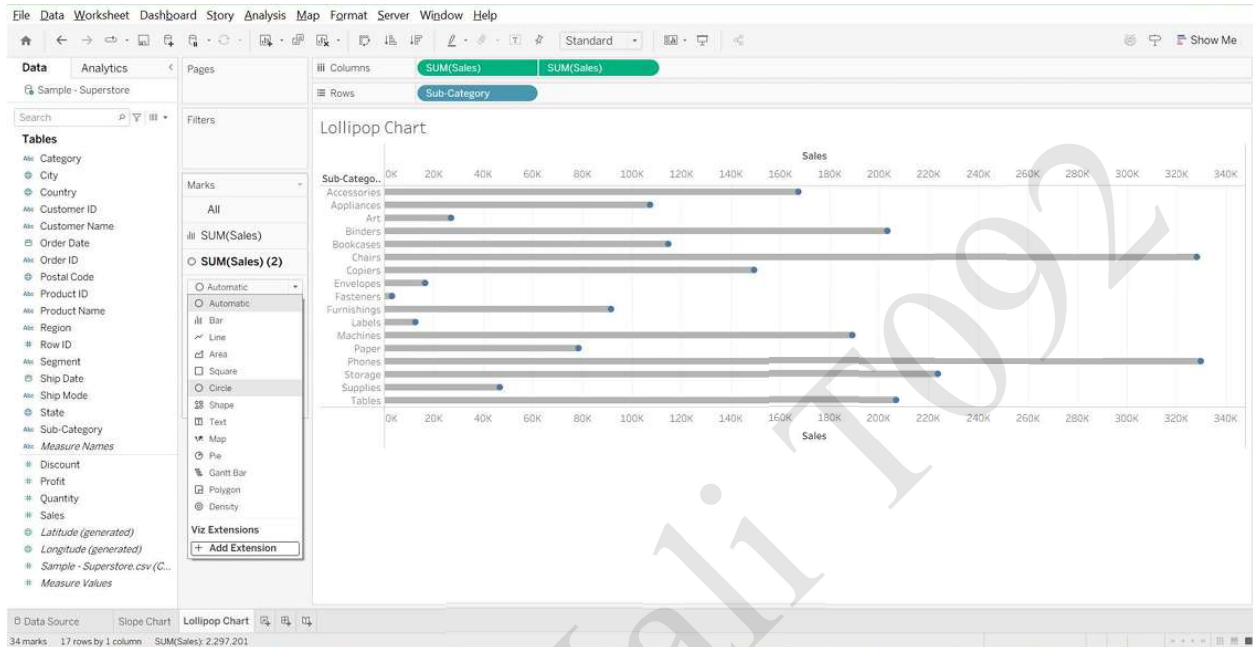

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

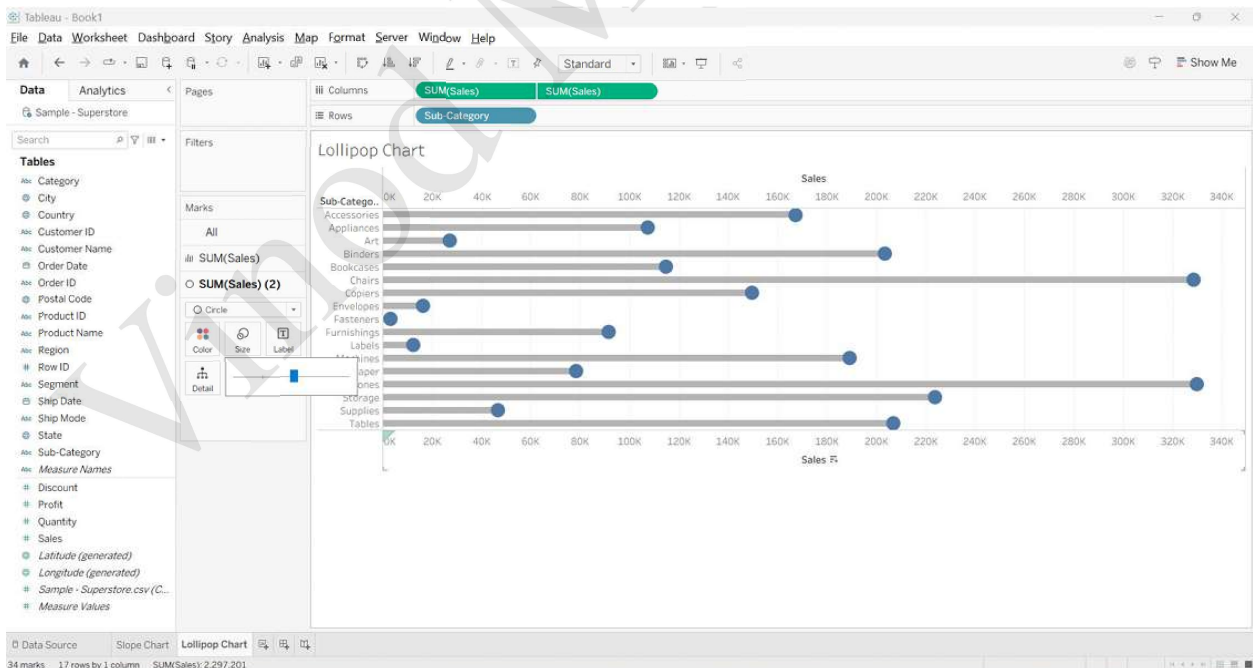

2. Configure the Head (Circle):

o Click on the second SUM(Sales) (2) mark card.

o Change the mark type dropdown to Circle.

o Click the Size tile --> increase the circle size so it sits neatly at the tip of each bar stem.

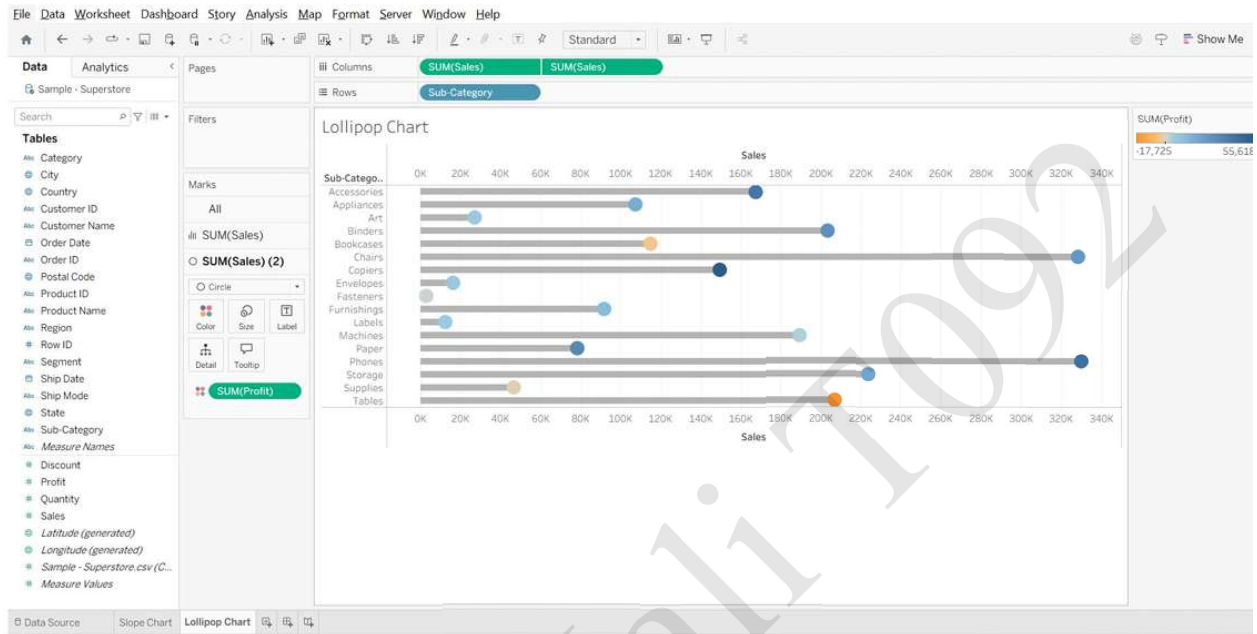

Name :- Vinod Manohar Mali

Roll no :- T092

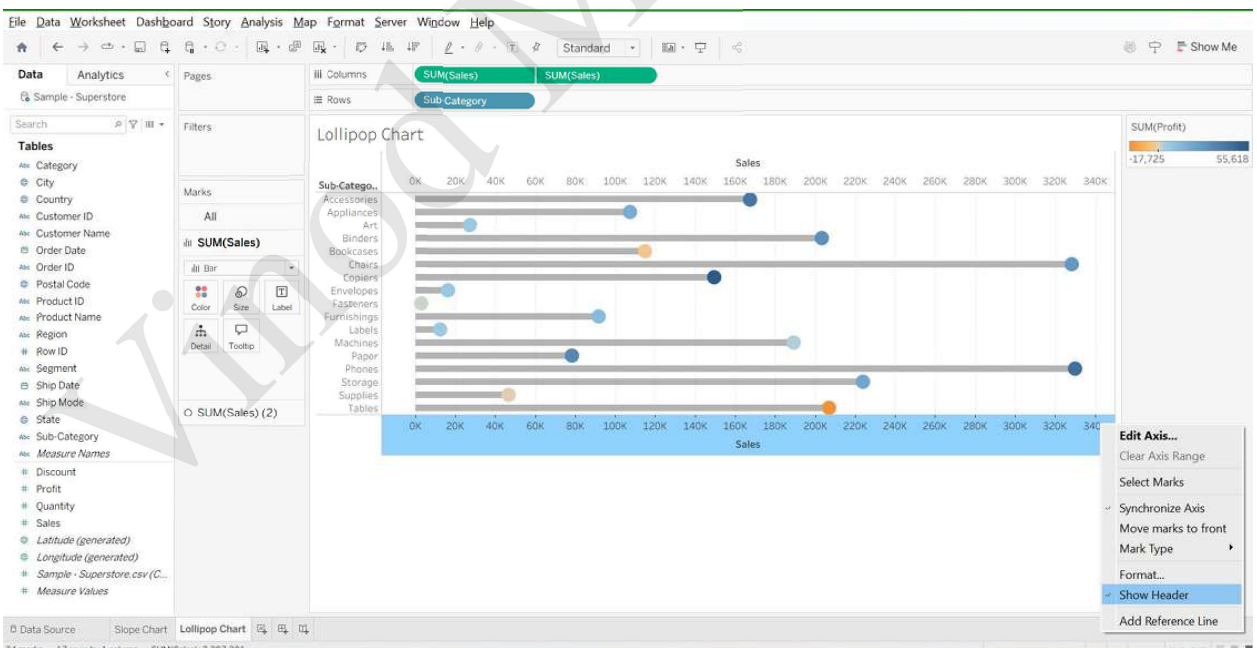

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

- o Drag Profit onto the Color tile of this second marks card.
- o (Observation): Sub-categories like Tables immediately show negative profit (red/orange) while having high sales.

Step 4: Clean Up Axis Formatting

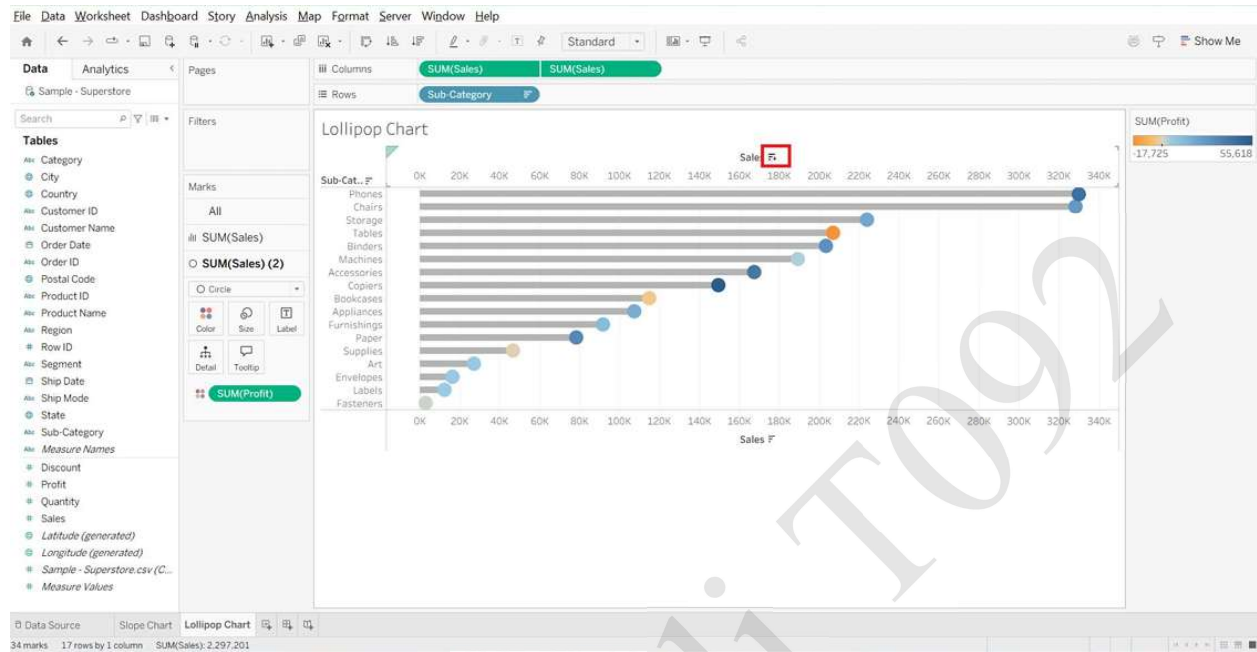

1. Right-click the top header axis --> uncheck Show Header.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Click the Sort Descending button in the top toolbar to sort by total sales.

B: Design Waterfall Charts

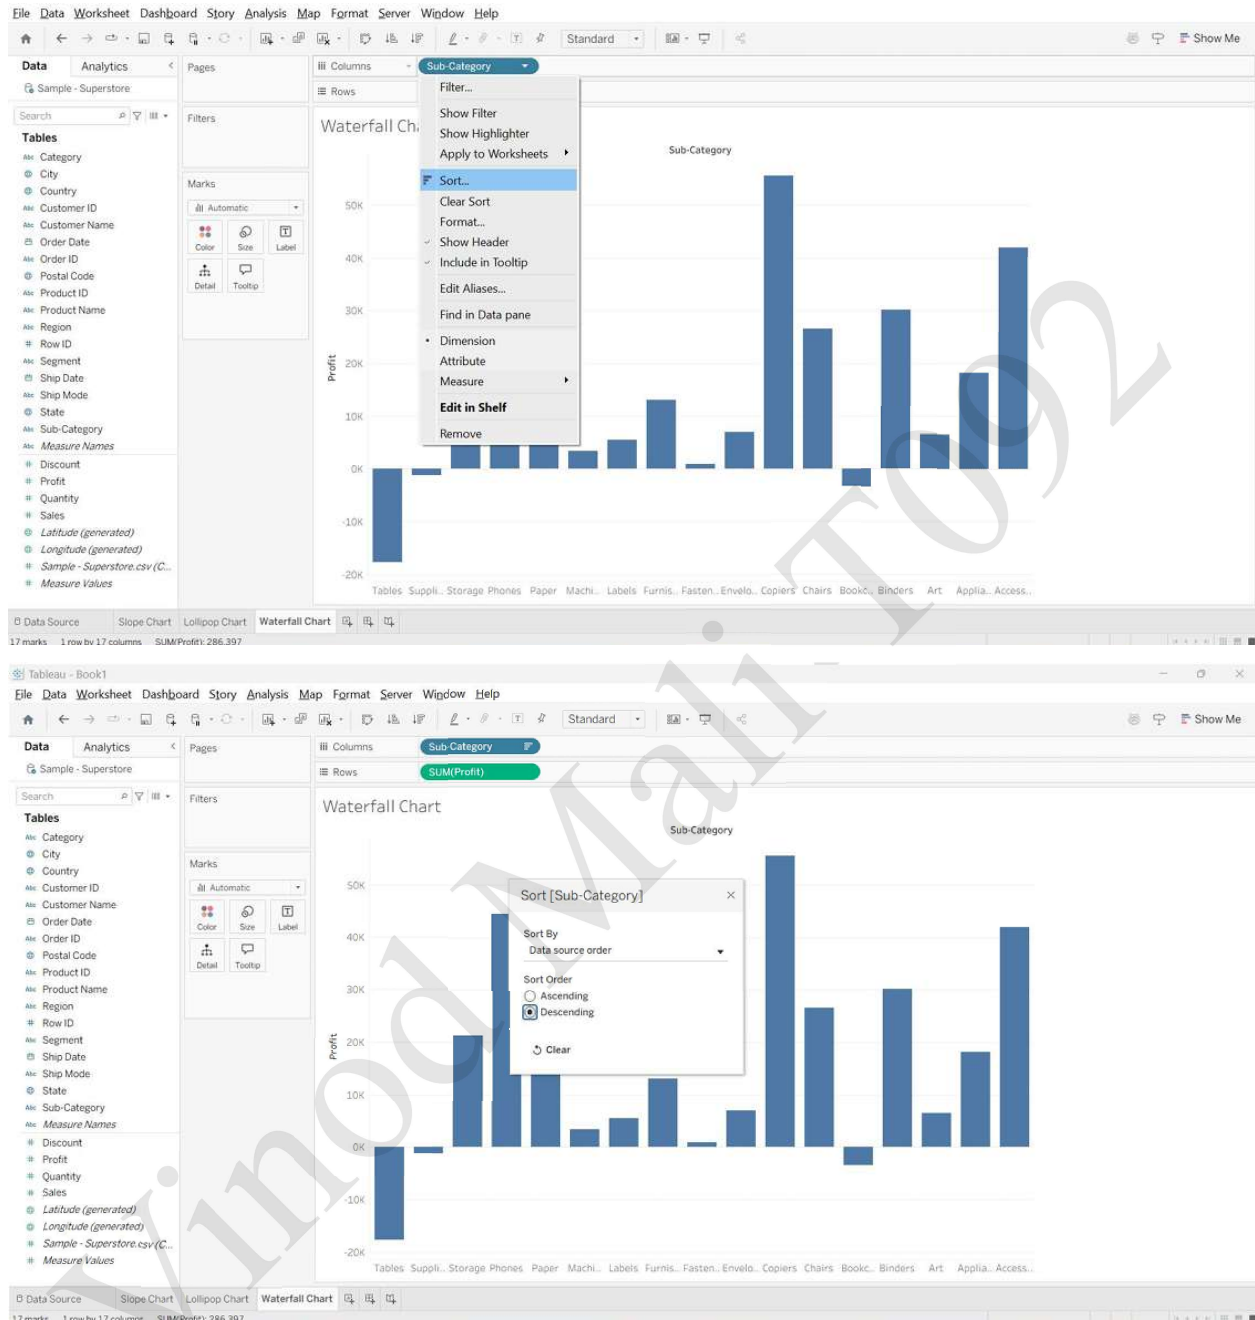

Step 1: Set Up the Base Worksheet

- 1. In Tableau Desktop, create a new worksheet and rename it: Waterfall Chart.**
- 2. Drag Sub-Category onto the Columns shelf.**
- 3. Drag Profit onto the Rows shelf (appears as SUM(Profit)).**
- 4. Sort the view: Click the Sort Descending button on the top toolbar so the highest profit sub-categories appear first.**

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

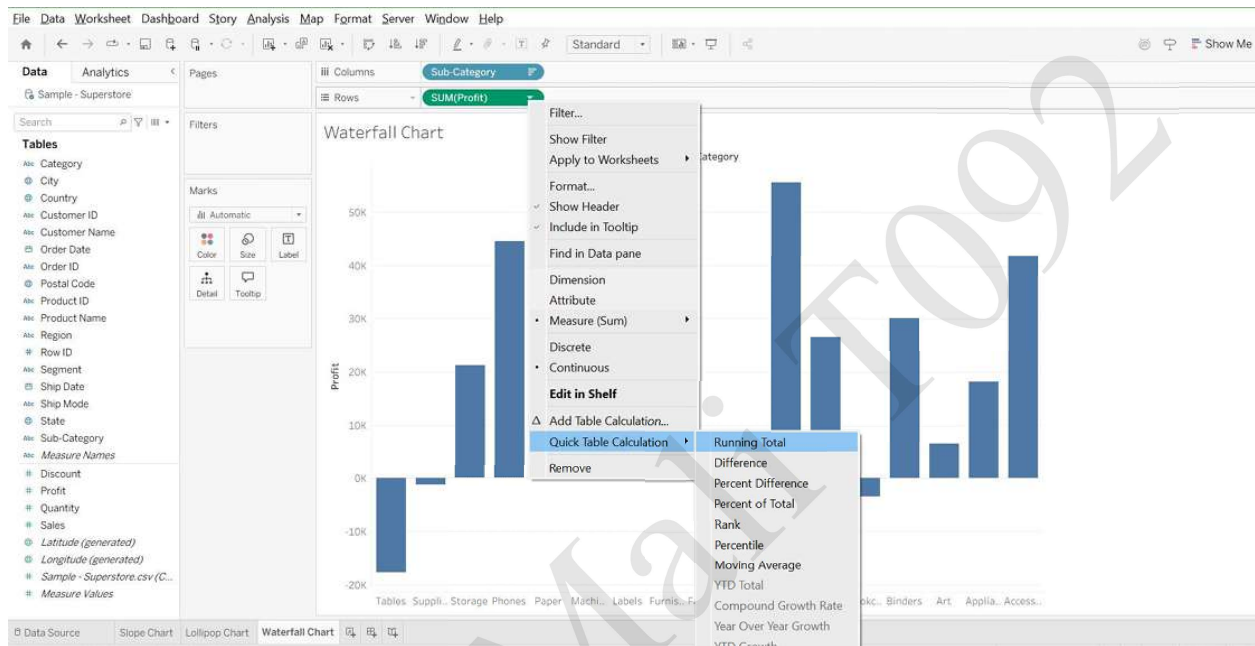

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 2: Apply Running Total Table Calculation

- 1. Right-click the SUM(Profit) pill on the Rows shelf.**
- 2. Select Quick Table Calculation --> Running Total.**
- 3. Notice that the line/bars now accumulate upward across the columns from left to right.**

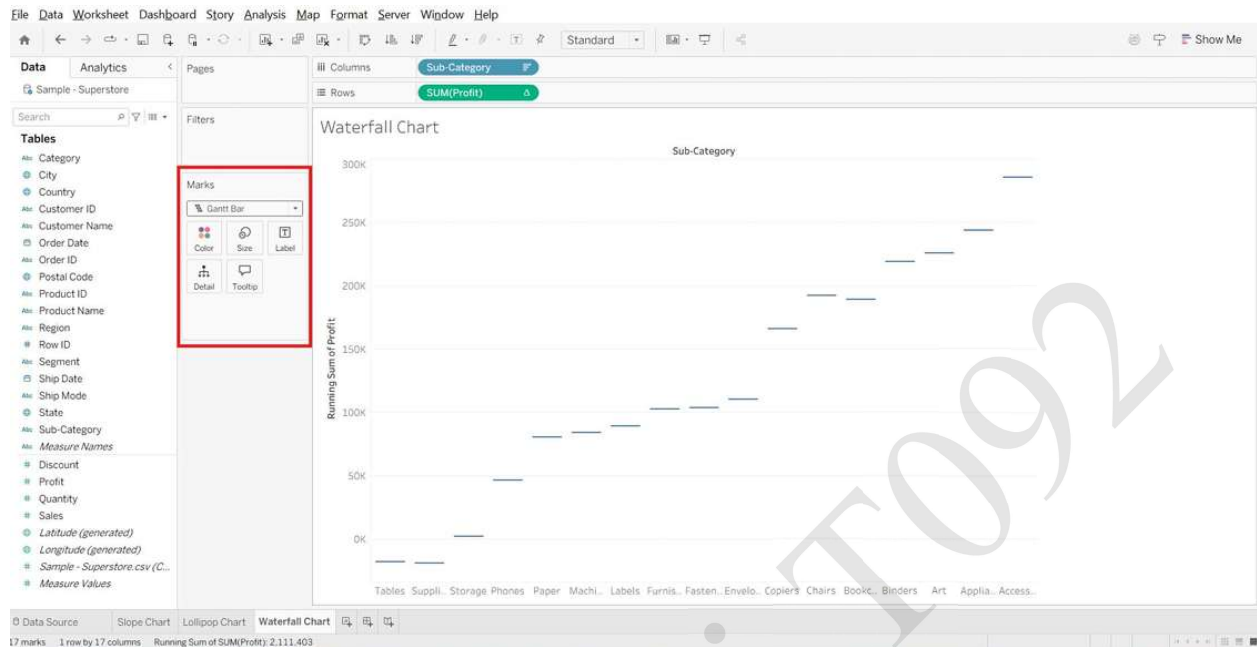

Step 3: Switch Mark Type to Gantt Bar

- 1. On the Marks card, change the dropdown selector from Automatic (or Bar) to Gantt Bar.**
- 2. You will see thin horizontal baseline markers representing the running total cumulative level at each sub-category step.**

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

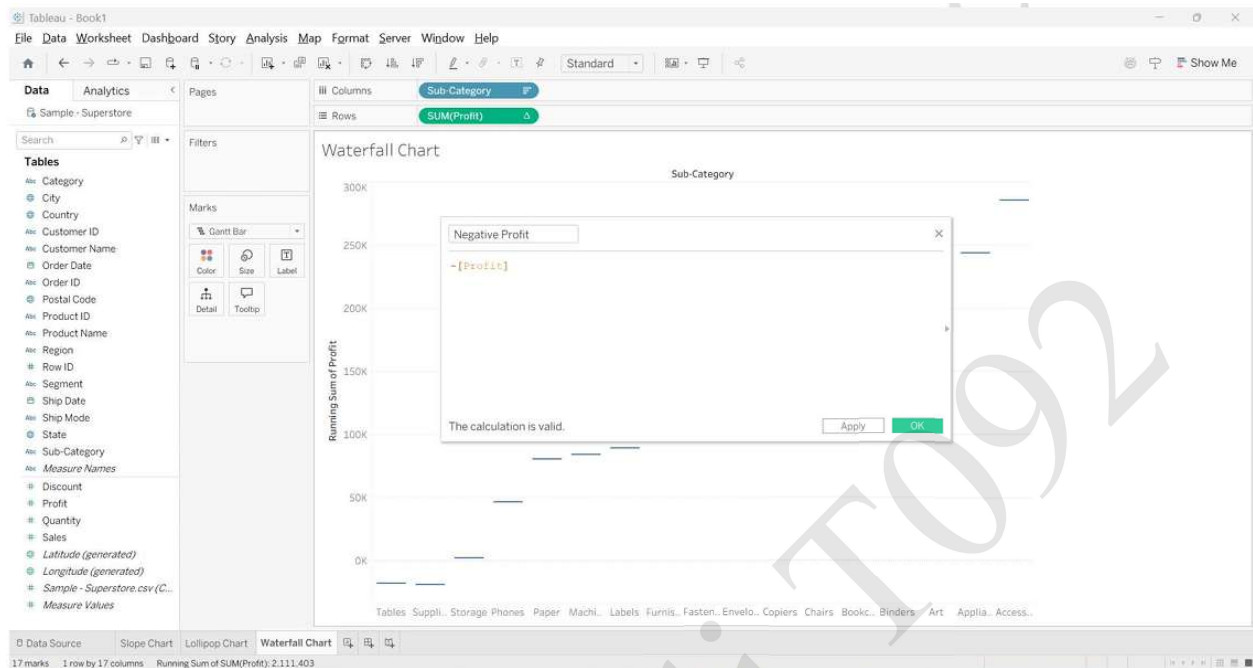

Step 4: Create the Negative Profit Sizing Calculation

Why negative sizing? In Tableau, a Gantt mark draws upward by default if sized positively. To make the block extend downward from the running total baseline to the previous point, we must size it by $-[\text{Profit}]$.

- 1. In the Data Pane on the left, right-click an empty area --> select Create Calculated Field....**
- 2. Set the field details:**
 - o Field Name: Negative_Profit**
 - o Tableau Formula: Code snippet $-[\text{Profit}]$**
 - o Click OK.**

Name :- Vinod Manohar Mali
Roll no :- T092

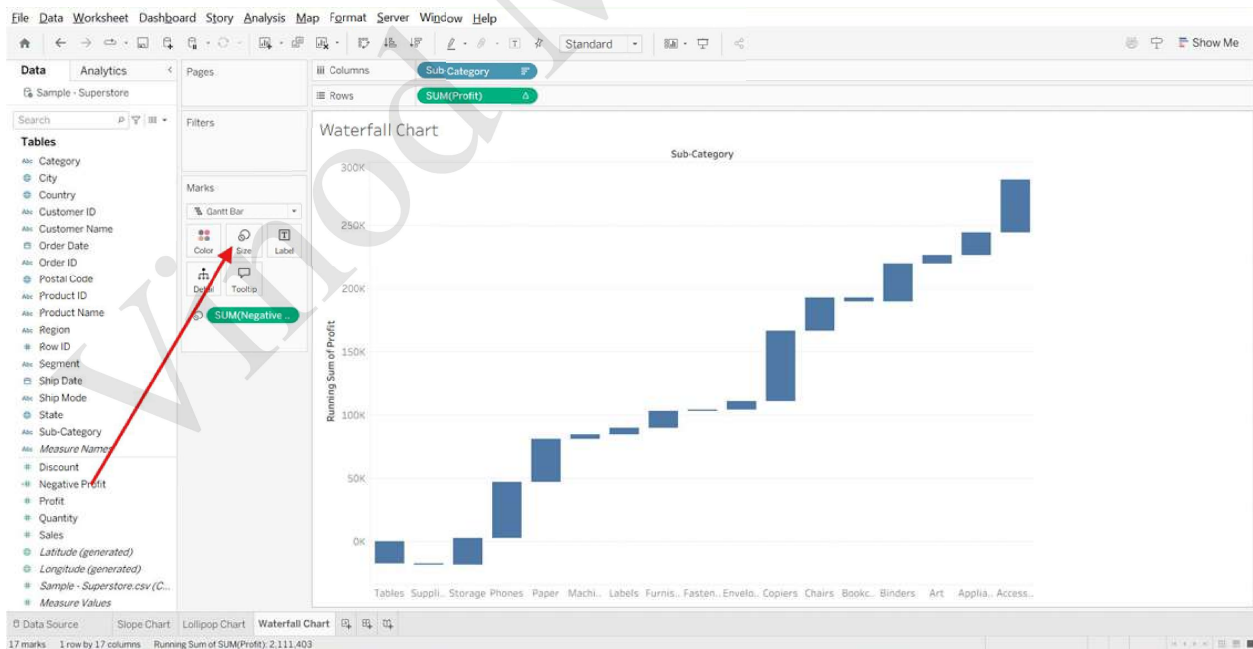

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 5: Size and Color the Waterfall Blocks

1. Drag Negative_Profit onto the Size tile on the Marks card.

o The floating Gantt bars will now expand vertically, bridging each step to the next.

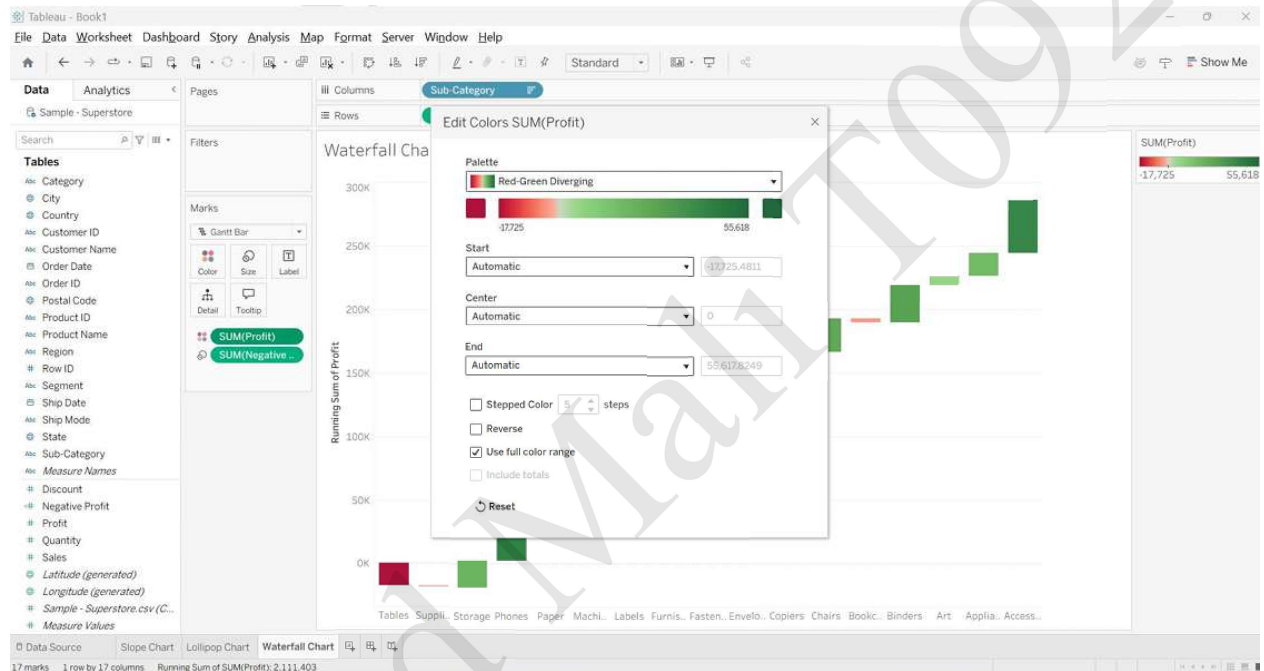

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Drag Profit (original measure) onto the Color tile on the Marks card.
3. Click the Color tile --> select Edit Colors...:
 - o Change Palette to Red-Green Diverging (or Red-Blue).
 - o Check Use Full Color Range or set Center at 0.
 - o Click OK.
 - o (Observation: Profitable categories like Copiers/Phones appear green; loss making categories like Tables, Bookcases, and Supplies appear distinctly red, showing where cumulative profit declines).

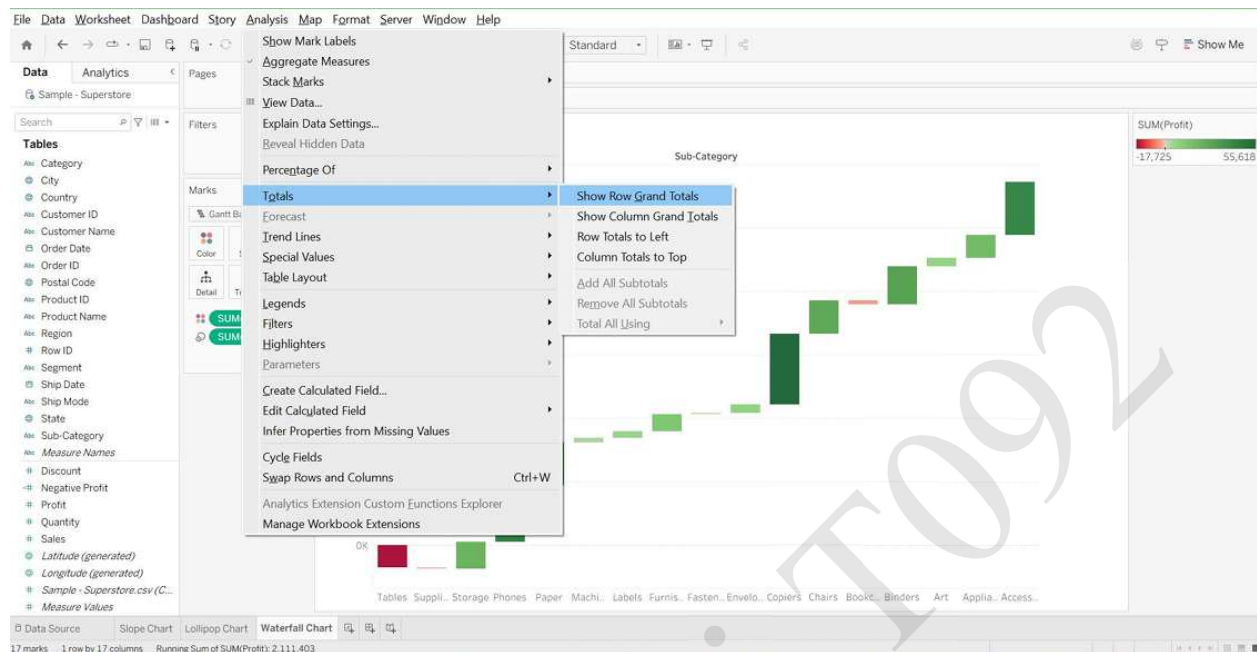

Step 6: Add Grand Totals to Close the Waterfall

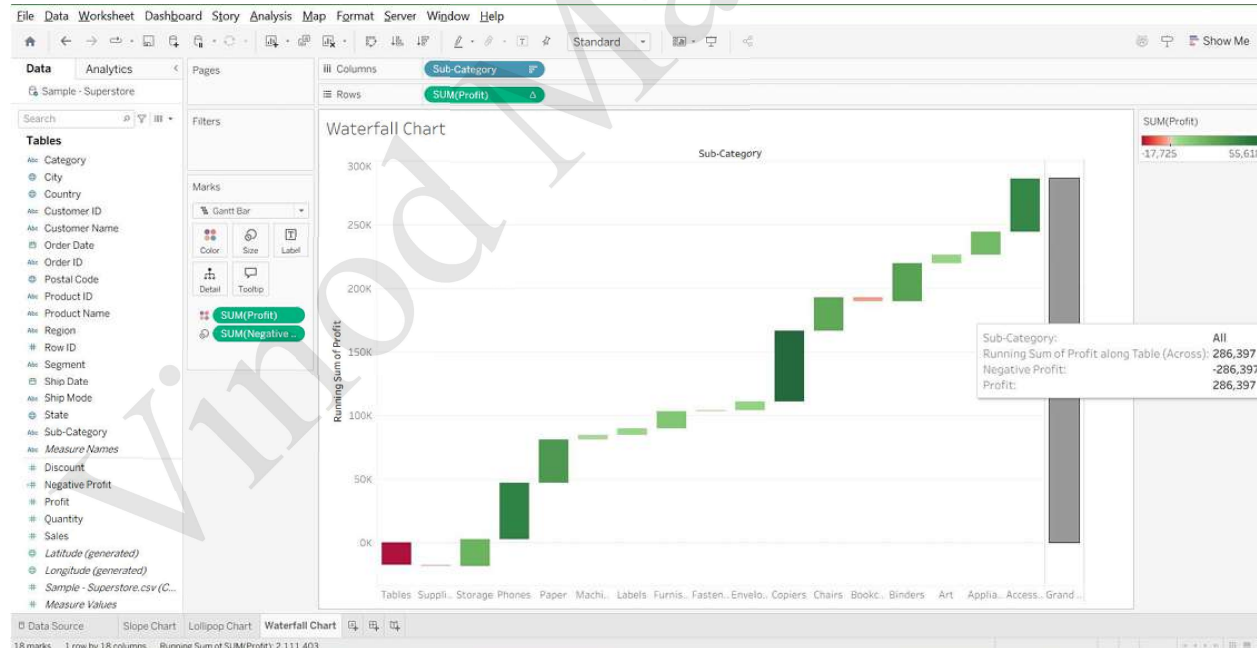

1. Go to the top application menu: select Analysis --> Totals --> Show Row Grand Totals (or Show Column Grand Totals depending on orientation).

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. A final anchor pillar will appear at the right end showing the final cumulative profit (\$286,397.02).

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

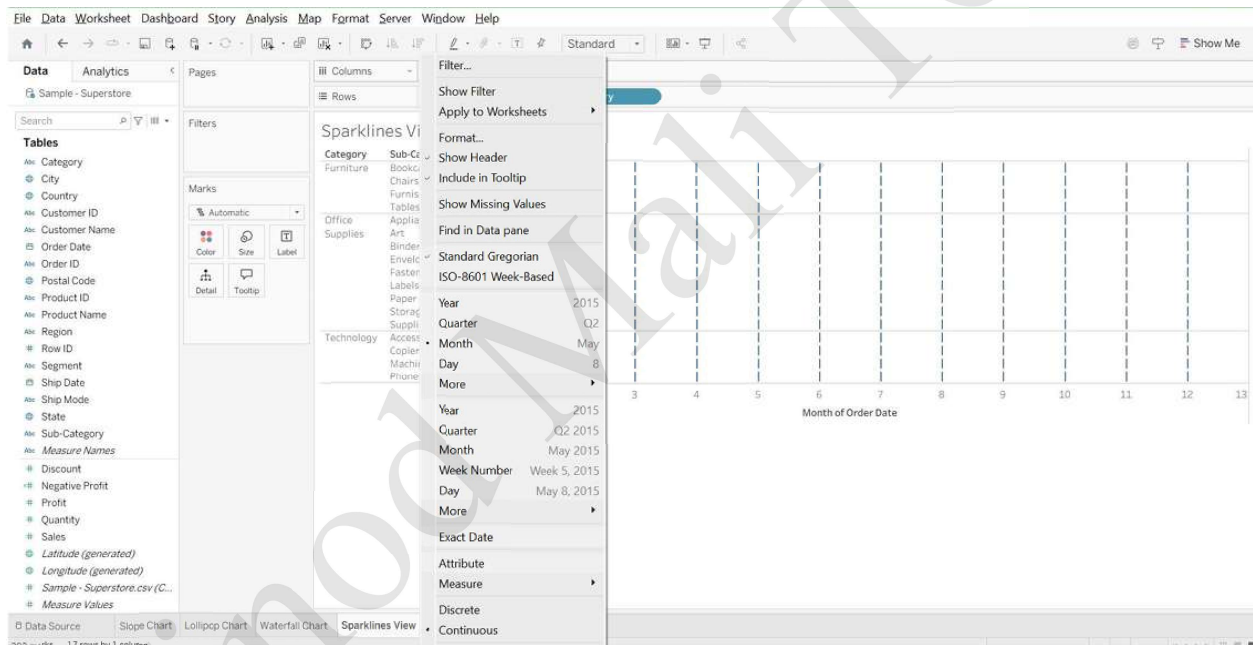

C: Build Sparklines for Trend Analysis

Step 1: Set Up the Base Worksheet and Table Dimensions

1. In Tableau Desktop, create a new worksheet and rename it: **Sparklines View**.
2. Drag **Category** onto the Rows shelf.
3. Drag **Sub-Category** onto the Rows shelf (to the right of Category).

Step 2: Add Continuous Time-Series for Trend Shape

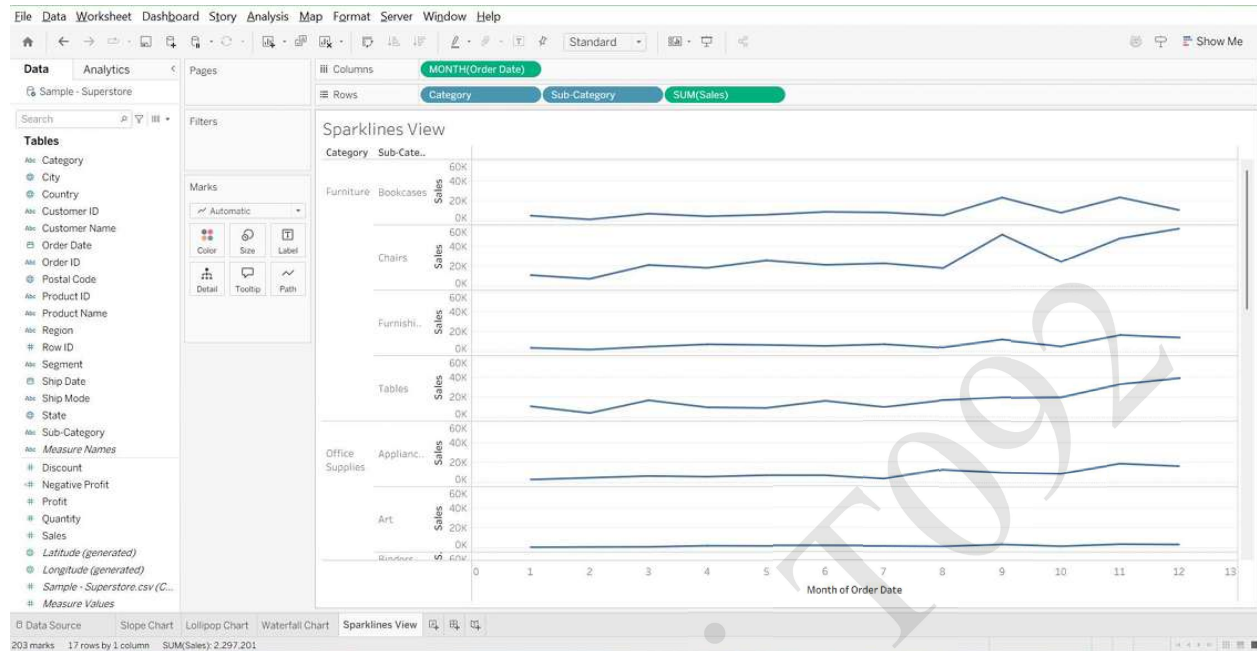

1. Drag **Order Date** onto the Columns shelf.
2. Right-click the **Order Date** pill on Columns --> choose the continuous **Month** option (the second Month entry in the dropdown list, showing Month May 2015, green pill MONTH(Order Date)).

3. Drag **Sales** onto the Rows shelf (appears as SUM(Sales)).

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

4. Notice that Tableau renders 17 individual line charts broken down by Sub-Category.

Step 3: Add Total Sales Metric Pill alongside the Sparkline

1. Drag Sales onto the Rows shelf again (to the left of SUM(Sales) or on Columns to create a side-by-side KPI cell).

o Alternative Clean Method: Drag Sales onto the Tooltip / Label or create a discrete total pill.

2. To create the classic tabular layout:

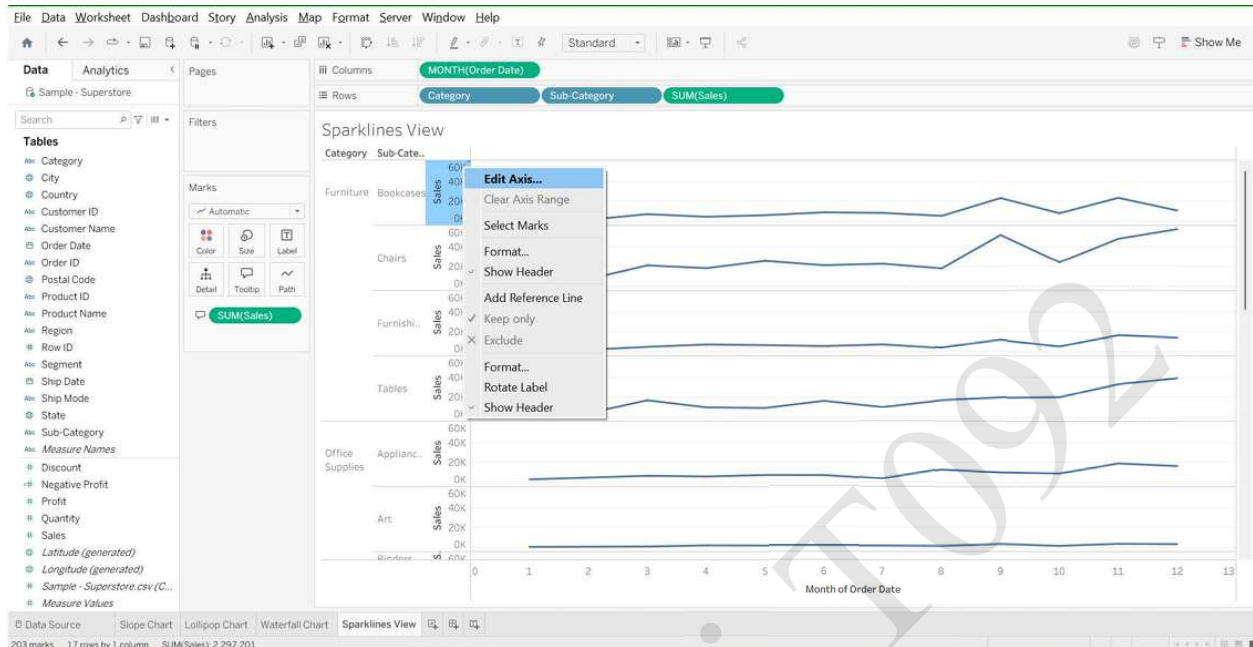

o Leave MONTH(Order Date) on Columns.

o Right-click the vertical Y-axis on any sparkline row --> select Edit Axis....

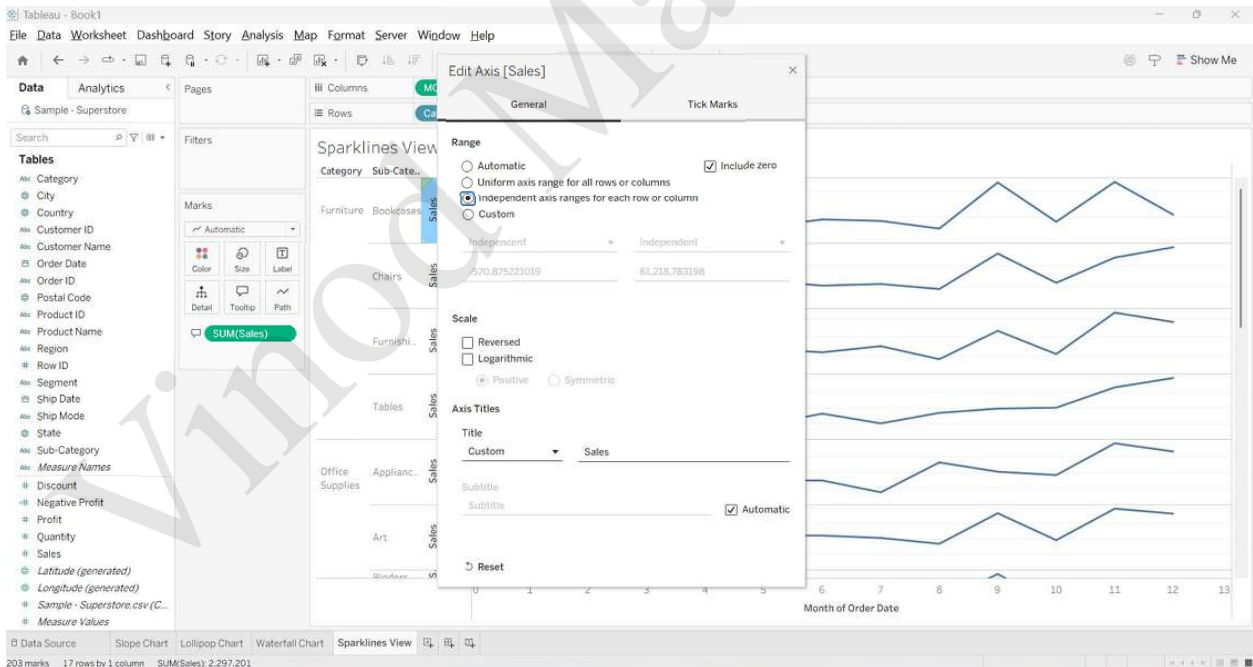

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

o Under the Range settings, choose Independent axis ranges for each row or column (this allows each sub-category to show its distinct trend profile without being compressed by larger categories).

Name :- Vinod Manohar Mali
Roll no :- T092

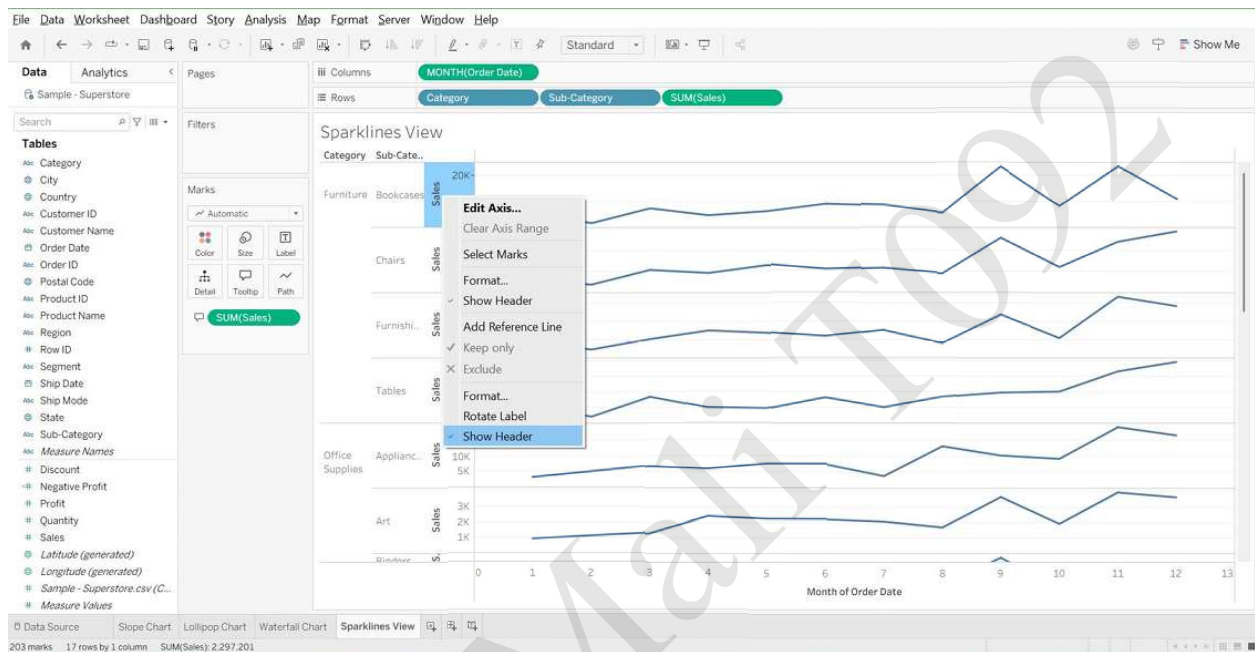

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

o Close the Edit Axis dialog.

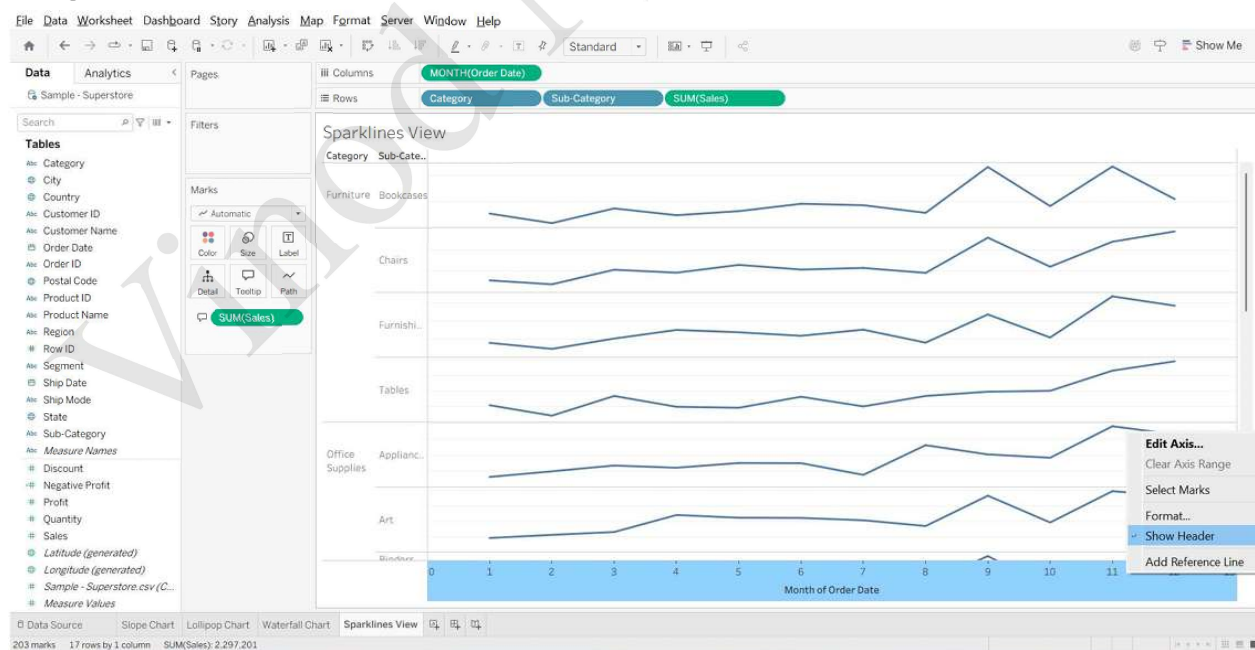

Step 4: Strip Away Visual Clutter (Clean Sparkline Design) A true sparkline must have zero chart "ink" (no headers, tick marks, zero lines, or gridlines):

1. Hide Axes:

o Right-click the vertical Y-axis (Sales) --> uncheck Show Header.

o Right-click the bottom horizontal X-axis (Order Date) --> uncheck Show Header.

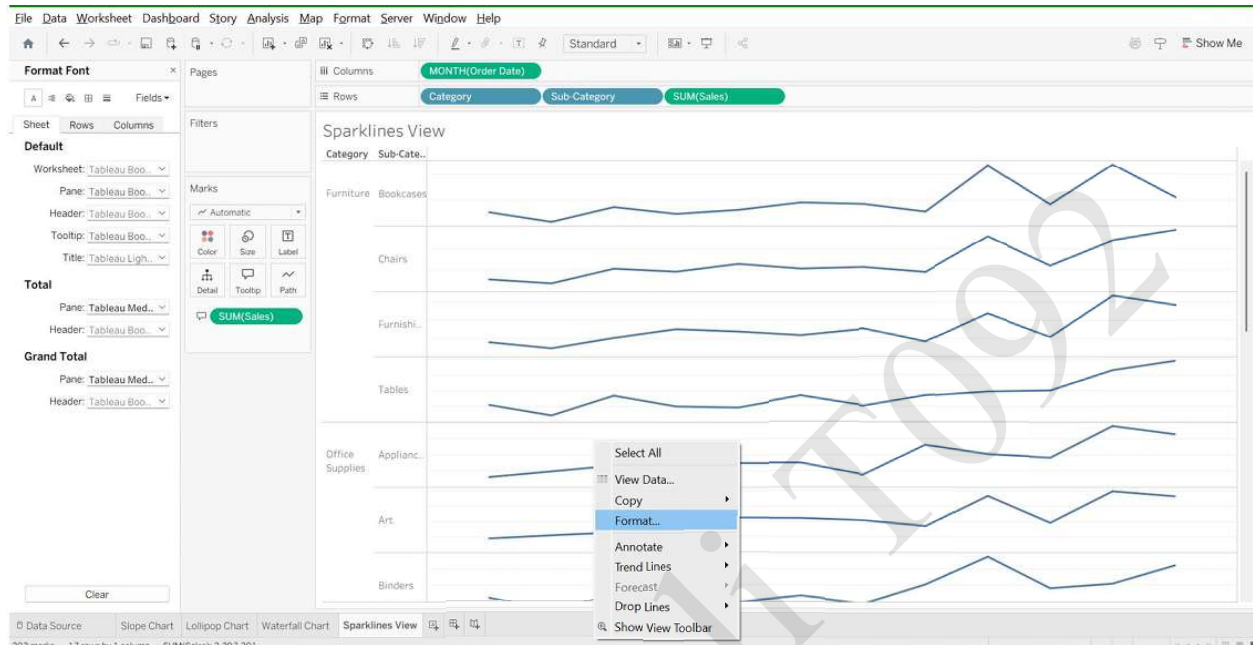

Name :- Vinod Manohar Mali

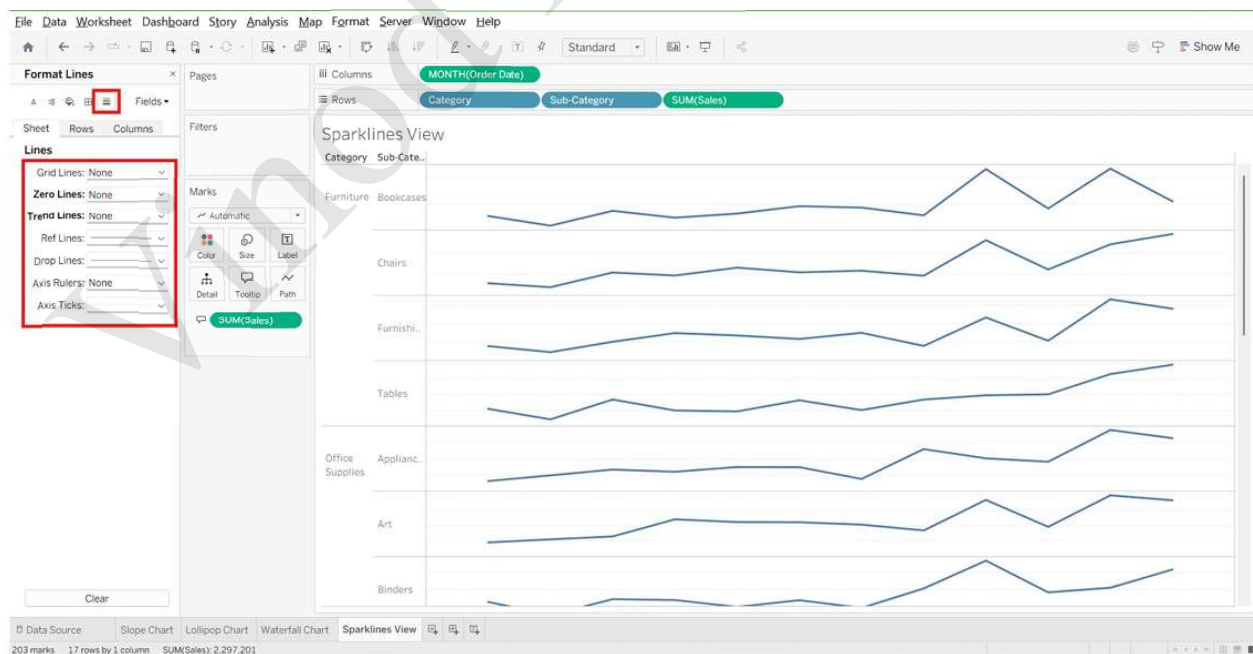

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Remove Gridlines & Dividers: o Right-click anywhere in the chart canvas --> select Format....

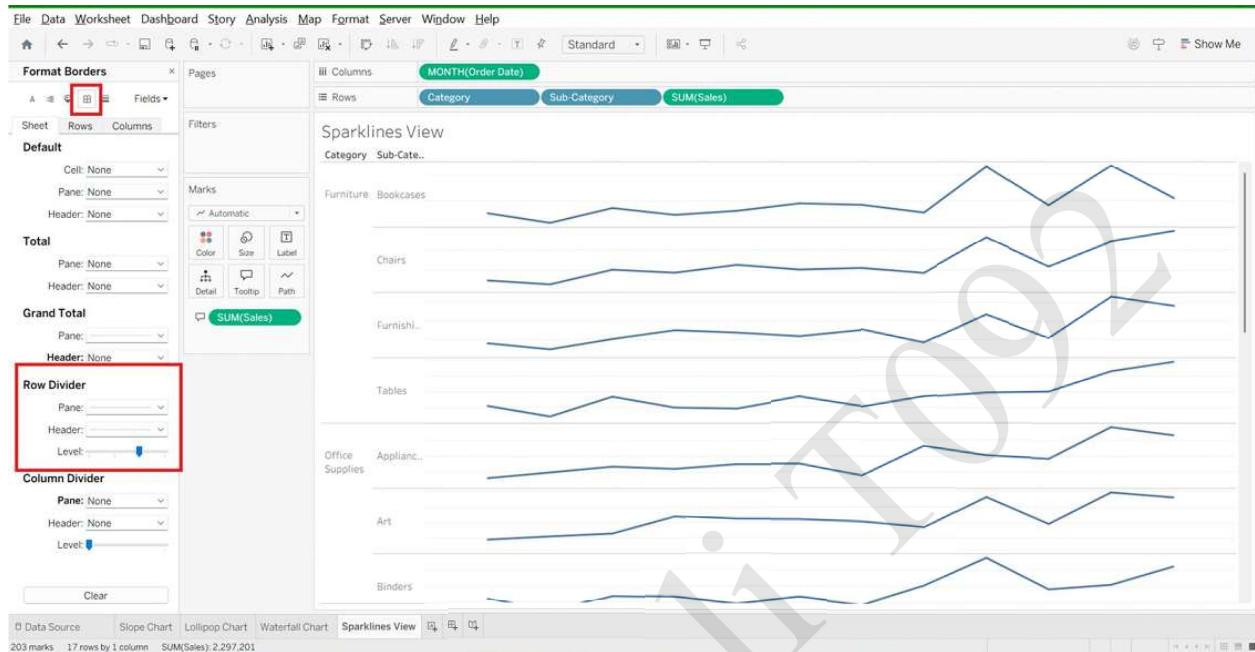

o In the Format pane on the left, click the Lines icon (paintbrush with lines):
Set Grid Lines to None.
Set Zero Lines to None.
Set Trend Lines and Drop Lines to None.

Name :- Vinod Manohar Mali
Roll no :- T092

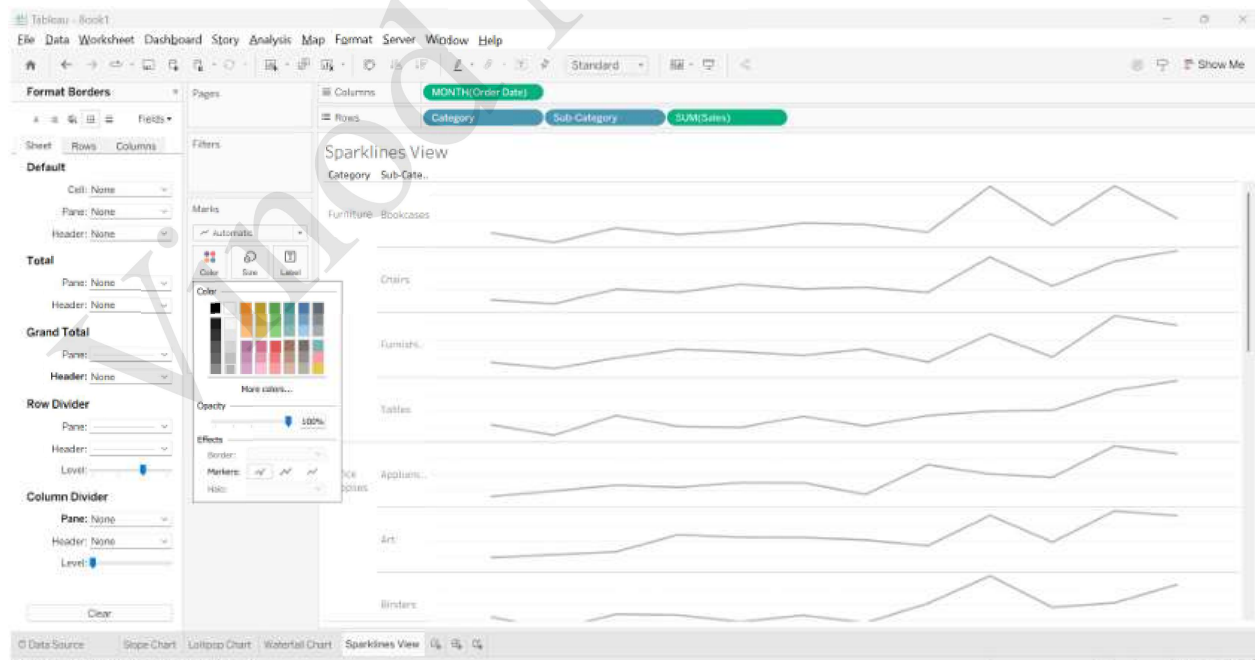

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

o Click the Borders icon (square outline): Set Row Divider to a light thin line. Set Column Divider to None.

Step 5: Highlight Minimum and Maximum Milestone Endpoints

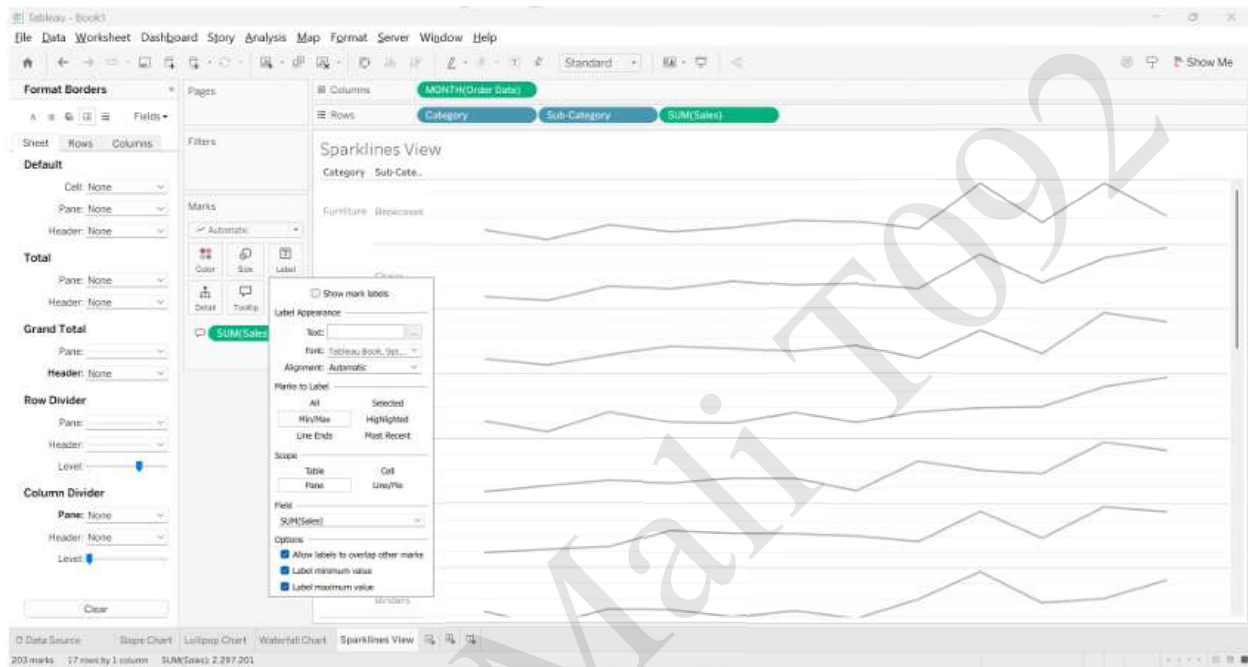

1. On the Marks card, click the Color tile --> set the line color to dark slate gray or deep navy.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

- 2. On the Marks card, click the Label tile:**
- o Check Show mark labels.**
 - o Under Marks to Label, select Min / Max.**
 - o Under Field, ensure SUM(Sales) is selected.**
 - o Under Options, check Label minimum value and Label maximum value.**

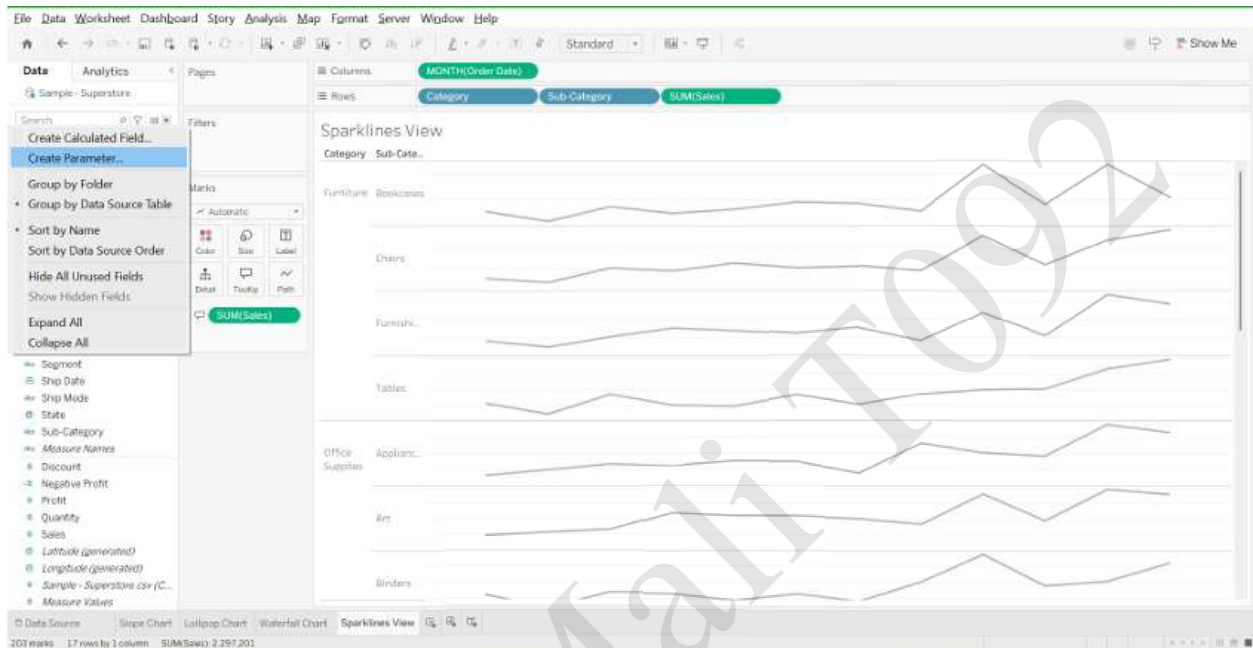

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

D: Implement Sheet Swapping for Dynamic Dashboards

Step 1: Create the Control Parameter

1. In the Data Pane on the left, click the small dropdown arrow next to the search bar (or right-click an empty area) --> select Create Parameter....

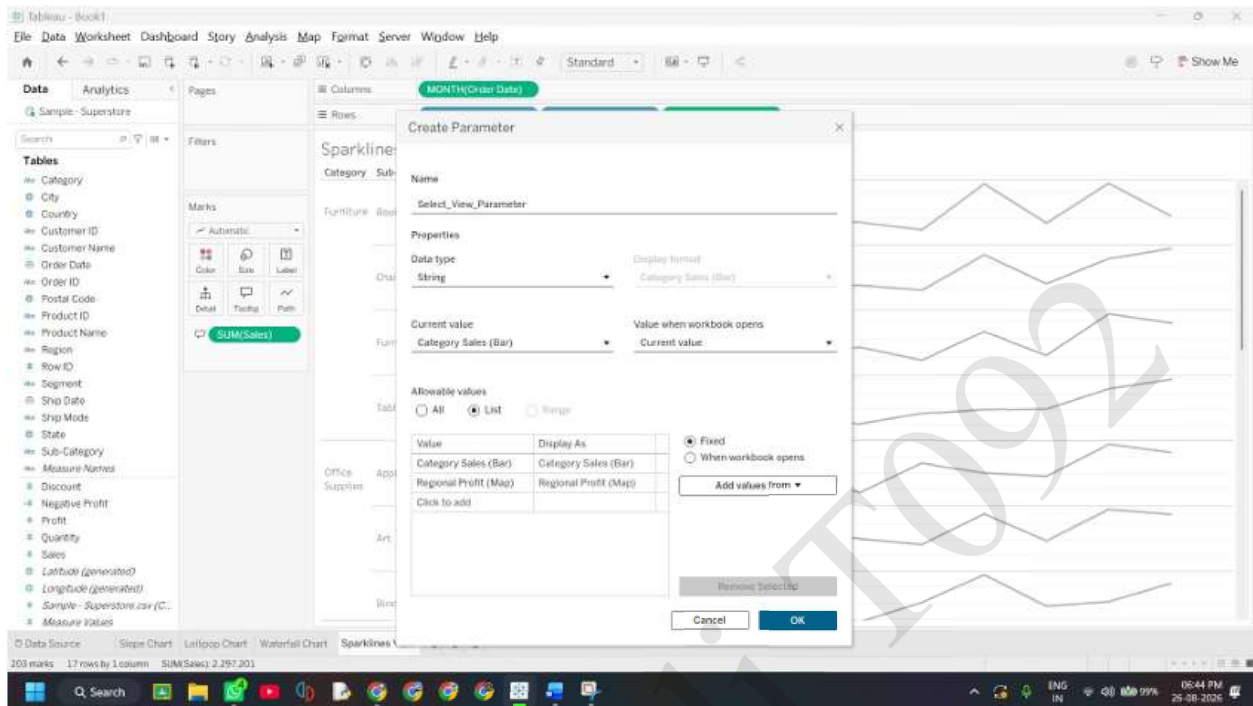

2. Configure the parameter properties:

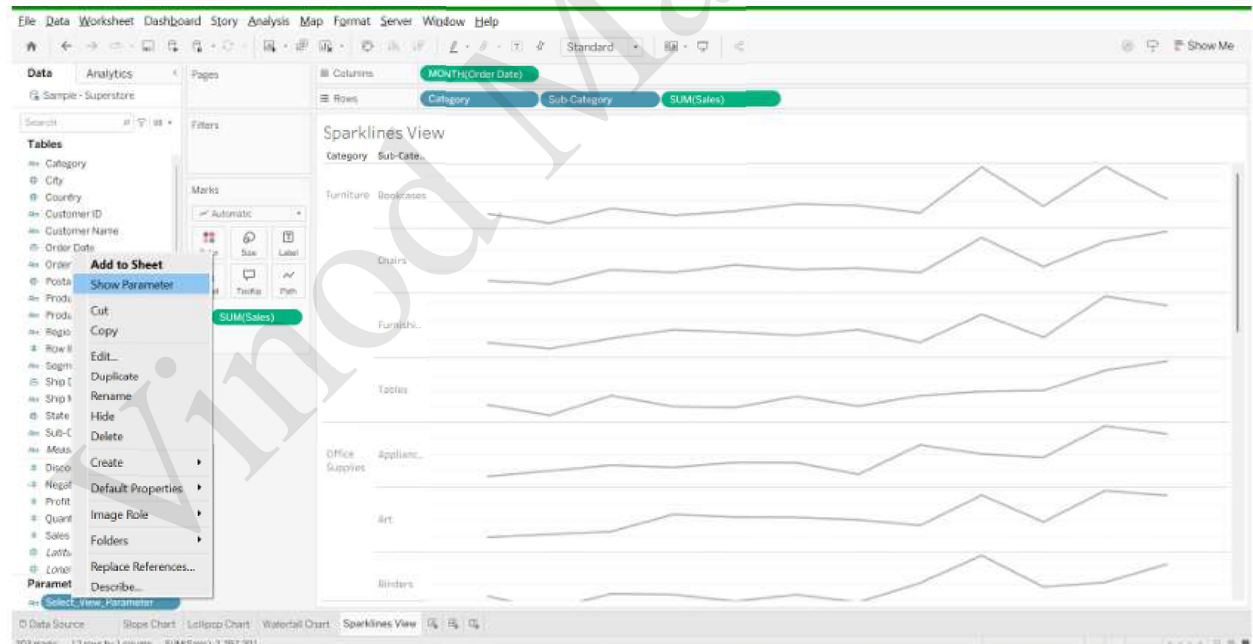

- o Name: Select_View_Parameter
 - o Data type: String
 - o Allowable values: Choose List
 - o In the List of values table, type the two view names:
 1. Category Sales (Bar)
 2. Regional Profit (Map)
 - o Current value: Set to Category Sales (Bar)
- 3. Click OK.**

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

4. In the Data Pane under Parameters, right-click Select_View_Parameter --> select Show Parameter.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 2: Create the Dynamic Filter Field

1. Right-click an empty space in the Data Pane --> select Create Calculated Field....

2. Configure the field: o Field Name: View_Filter

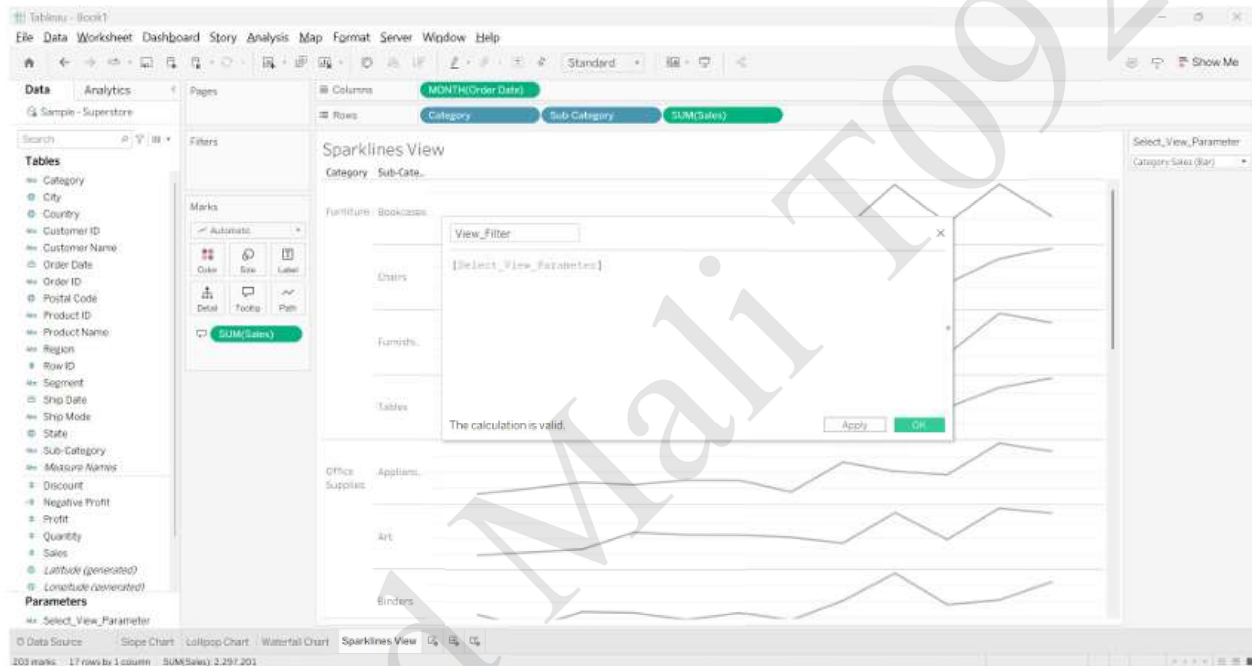

o Tableau Formula:

Code snippet

[Select_View_Parameter]

o (Note: This formula simply outputs the exact string selected in the parameter).

3. Click OK.

Step 3: Build Sheet 1 (View 1 - Category Sales)

1. Create a new worksheet and name it: View 1 - Category Sales.

2. Build the chart:

o Drag Category to the Rows shelf.

o Drag Sales to the Columns shelf.

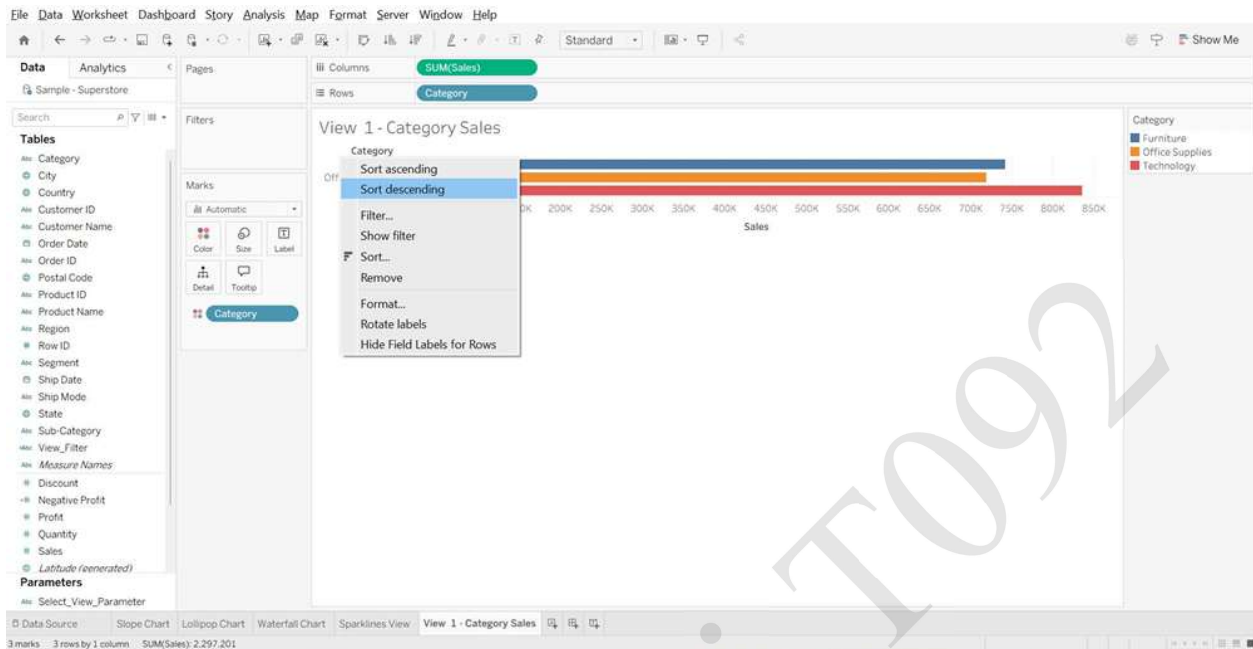

o Drag Category to Color on the Marks card.

o Sort bars descending.

Name :- Vinod Manohar Mali

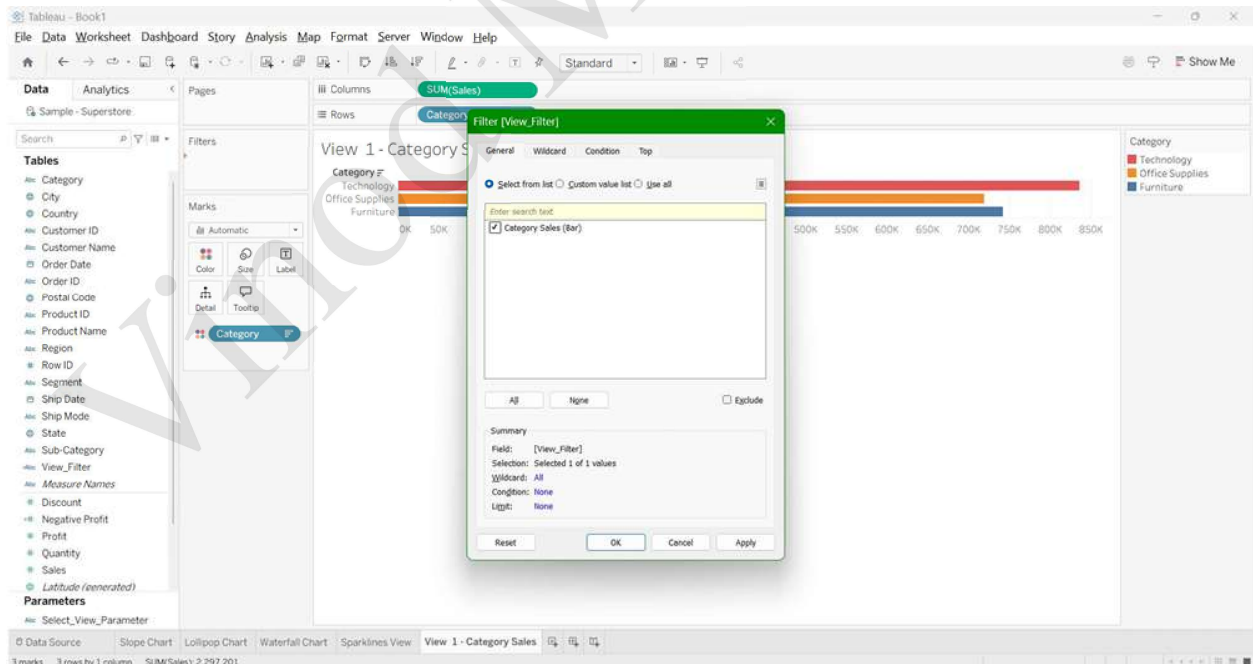

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

3. Apply the dynamic filter:

- o Ensure your parameter is set to **Category Sales (Bar)**.
- o Drag the calculated field **View_Filter** to the **Filters** shelf.
- o Select **Custom value list (or use the list)** --> type or check **Category Sales (Bar)** --> click **OK**.

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

4. (Notice: If the parameter matches, the chart is visible; if changed, it collapses completely).

Step 4: Build Sheet 2 (View 2 - Regional Profit)

1. Create another new worksheet and name it: View 2 - Regional Profit.

2. Build the chart:

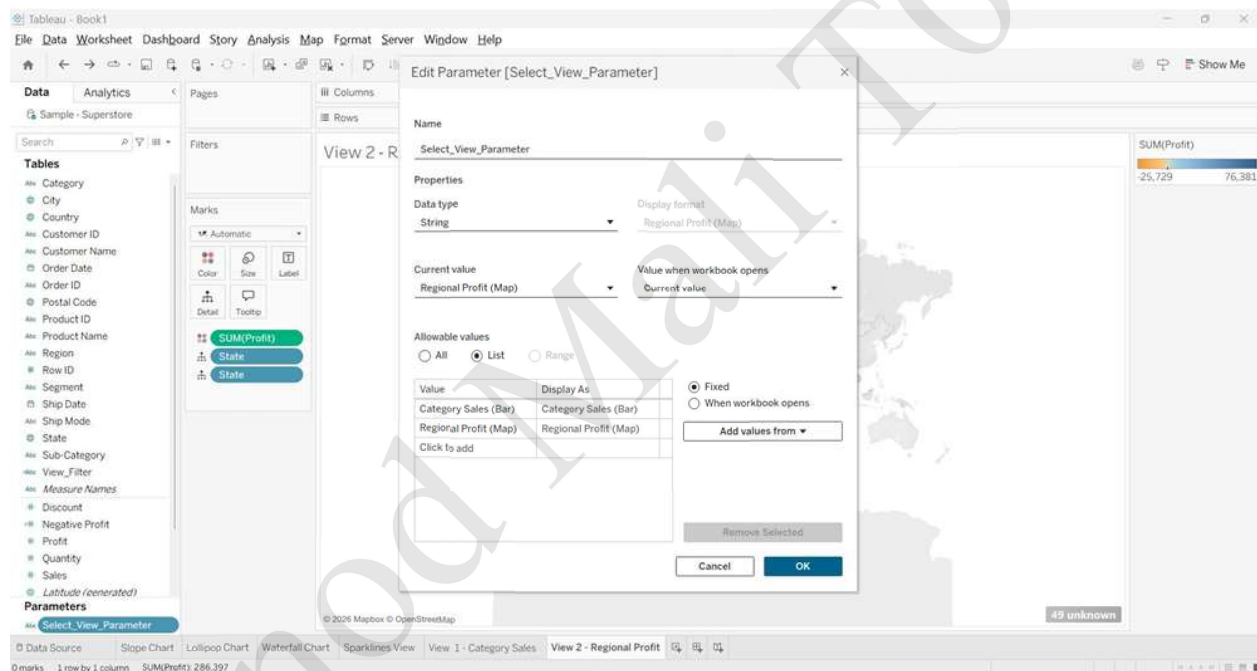

o Drag State to the canvas (or double-click to generate latitude/longitude map marks).

o Drag Profit to the Color tile on the Marks card.

o (Alternative bar view if offline: Drag Region to Rows, Profit to Columns).

3. Switch the Parameter to View 2:

o In the parameter control, switch the selection to Regional Profit (Map).

4. Apply the dynamic filter:

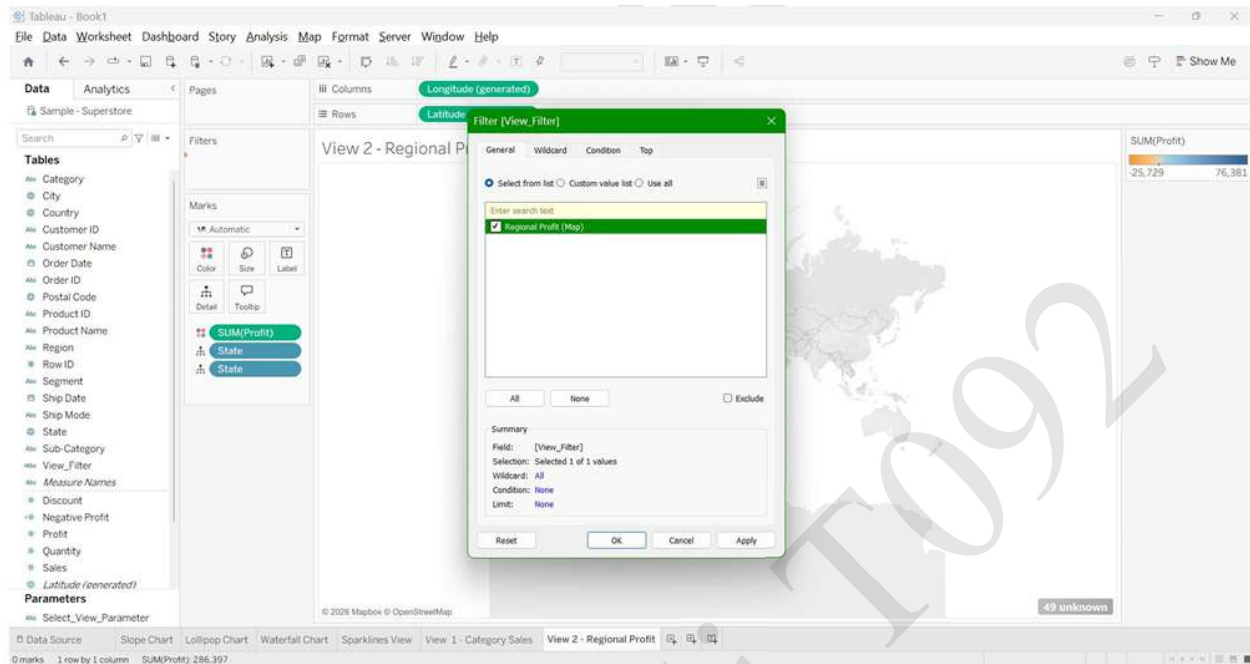

o Drag View_Filter to the Filters shelf.

o Check or type Regional Profit (Map) --> click OK.

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

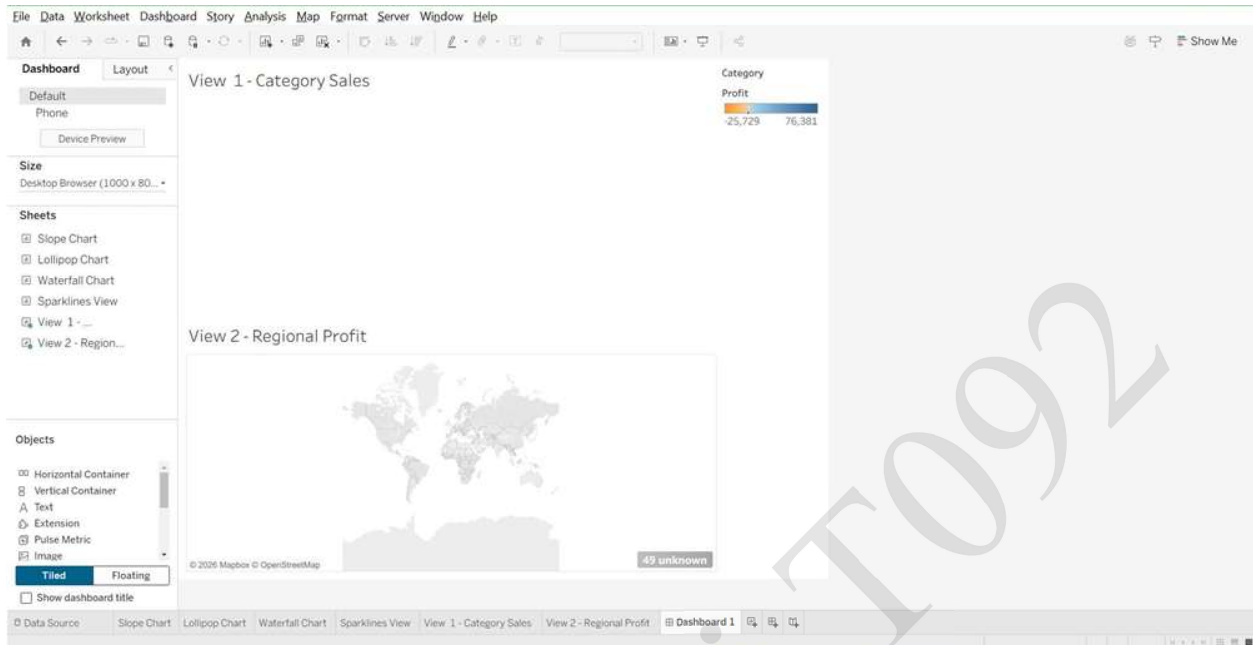

Step 5: Construct the Dynamic Swapping Dashboard

- 1. Create a new Dashboard (click the New Dashboard icon at the bottom tab bar).**
- 2. Under the Objects pane on the bottom-left:**
 - o Click and drag a Vertical Layout Container (or Horizontal) onto the blank dashboard canvas.**
- 3. Drag View 1 - Category Sales into the layout container.**
- 4. Drag View 2 - Regional Profit into the same layout container directly below or above the first sheet.**

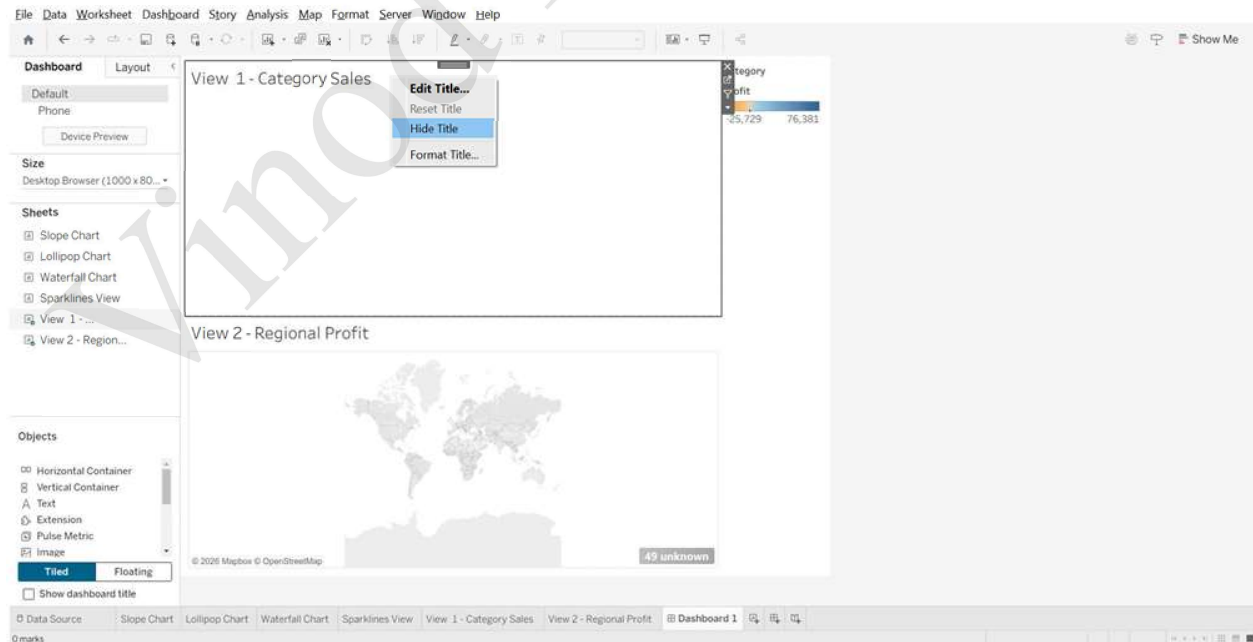

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

5. Critical Step for Sheet Swapping (Hide Titles):

- o Right-click the title bar of View 1 - Category Sales on the dashboard --> select **Hide Title**.
- o Right-click the title bar of View 2 - Regional Profit on the dashboard --> select **Hide Title**.
- o (Why? If titles remain visible, Tableau will keep the blank title box pinned even when the sheet collapses).

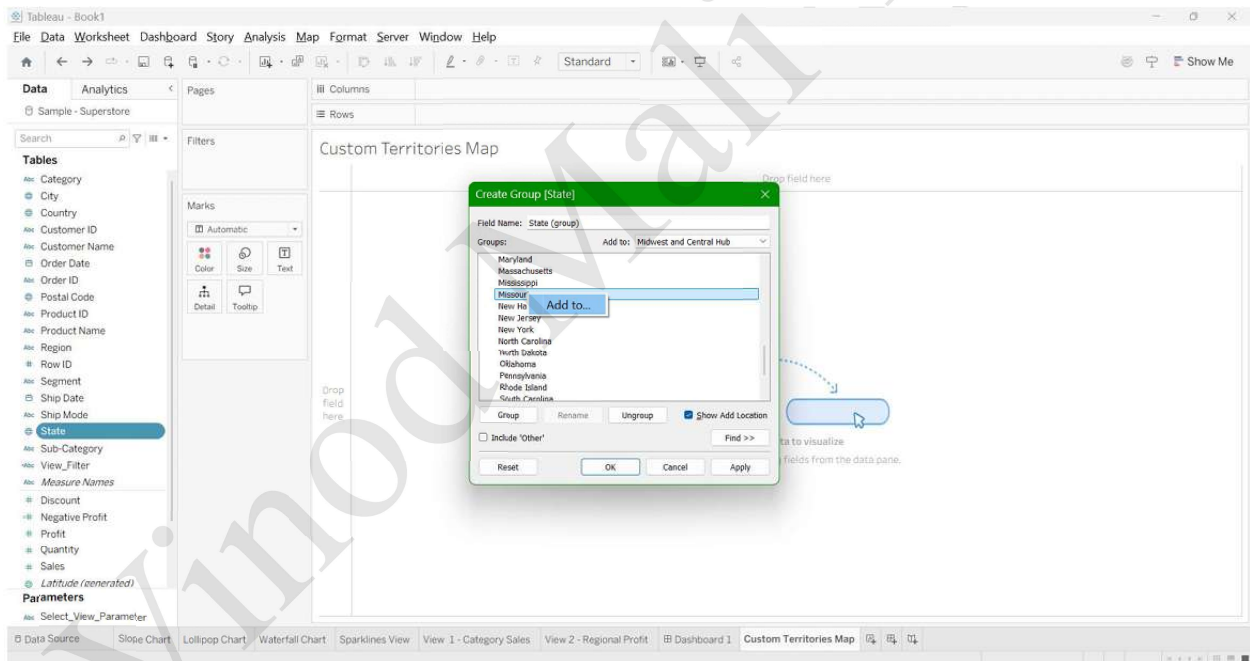

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

E: Create Custom Geographic Territories

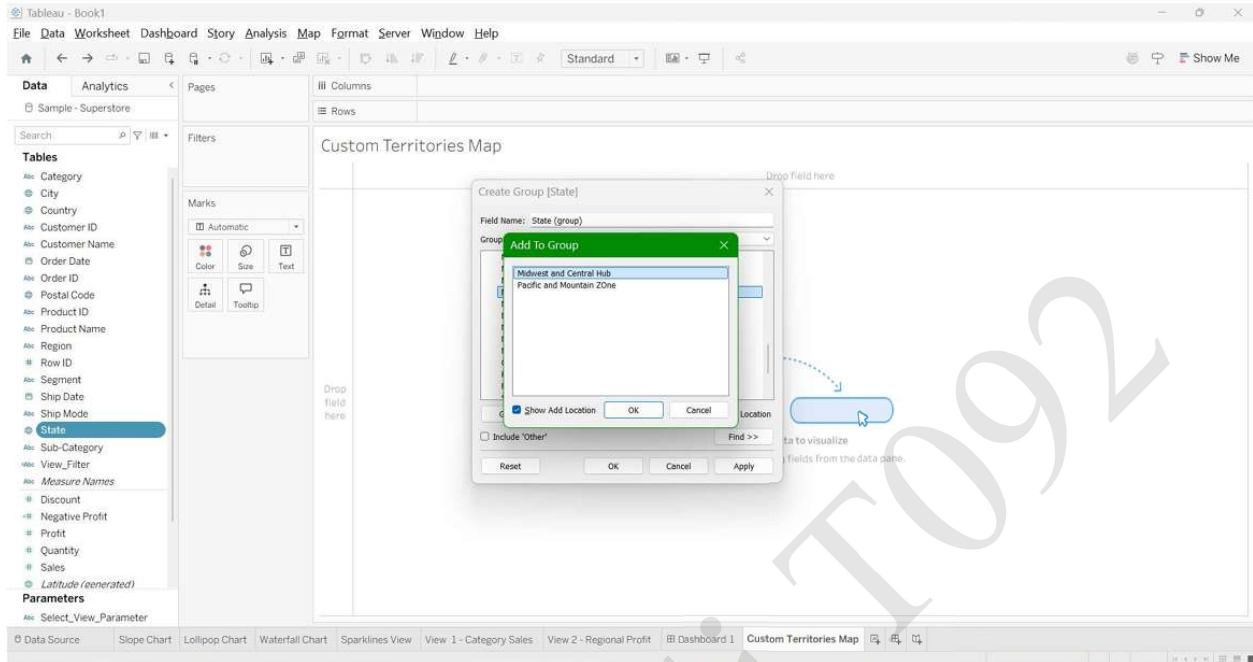

Step 1: Create a Custom State Grouping (Territories)

- 1. In Tableau Desktop, navigate to a new worksheet and rename it: Custom Territories Map.**
 - 2. In the Data Pane on the left, locate the State field.**
 - 3. Right-click State --> select Create --> Group....**
 - 4. In the grouping dialogue box:**
 - o Select states belonging to your custom zones and click Group:**
- Group 1 (Pacific & Mountain Zone): Select California, Washington, Oregon, Nevada, Arizona, Utah, Idaho, Montana, Wyoming, Colorado, New Mexico --> Click Group --> Rename group to: Pacific & Mountain Zone.**
- Group 2 (Midwest & Central Hub): Select Texas, Illinois, Wisconsin, Nebraska, Michigan, Ohio, Indiana, Minnesota, Iowa, Missouri, Kansas, Oklahoma, North Dakota, South Dakota -->**

Name :- Vinod Manohar Mali
Roll no :- T092

Practical No 11

Click Group --> Rename group to: Midwest & Central Hub.

Group 3 (Atlantic & North-East): Select New York, Pennsylvania, Massachusetts, New Jersey, Delaware, Maryland, Connecticut, Rhode Island, Vermont, New Hampshire, Maine --> Click Group - > Rename group to: Atlantic & North-East.

Group 4 (Southern Enterprise Territory): Check the box Include 'Other' (or group remaining southern states: Florida, Georgia, North Carolina, Virginia, Tennessee, Kentucky, Alabama, Mississippi, Arkansas, Louisiana, South Carolina) --> Rename to: Southern Enterprise Territory.

o Change the Field Name at the top to:

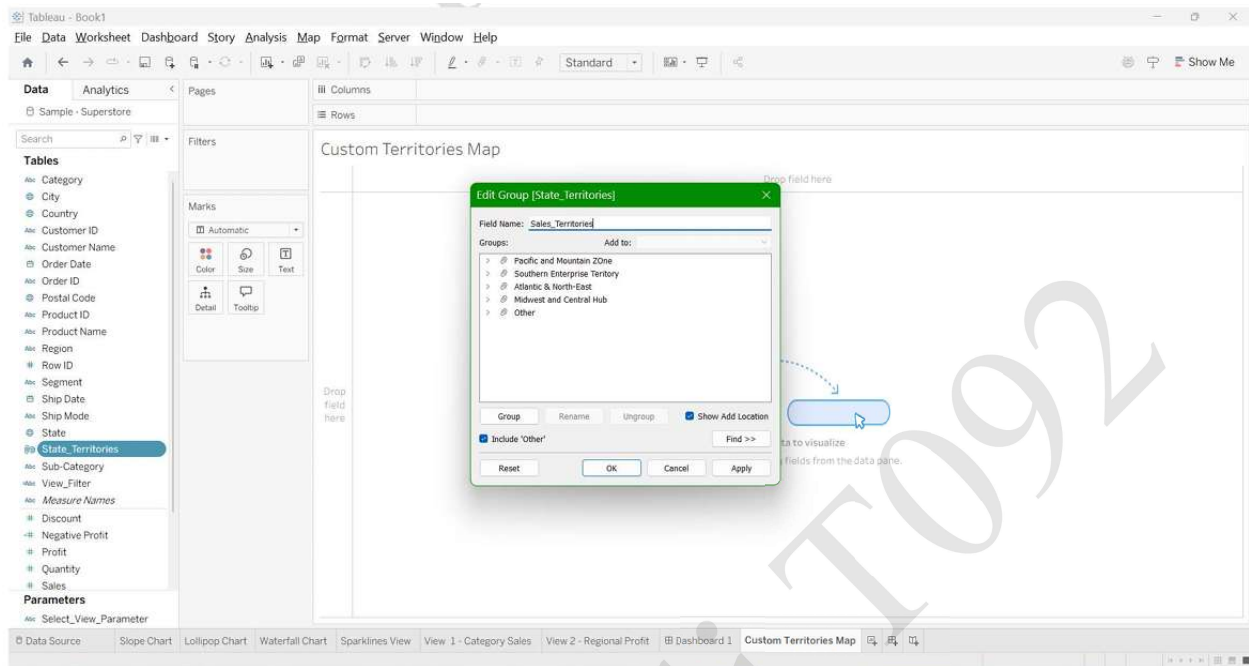

Sales Territories.

o Click OK.

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 2: Assign Geographic Role to the Custom Group

1. In the Data Pane, find your newly created field Sales_Territories (marked with a paperclip icon).
2. Right-click Sales_Territories --> select Geographic Role --> Create From... - > select State.
3. Notice that the icon next to Sales_Territories changes to a Globe icon (\oplus), indicating it is now a valid spatial geometry dimension.
4. NOTE: Since we have made groups manually so we can completely skip this step.

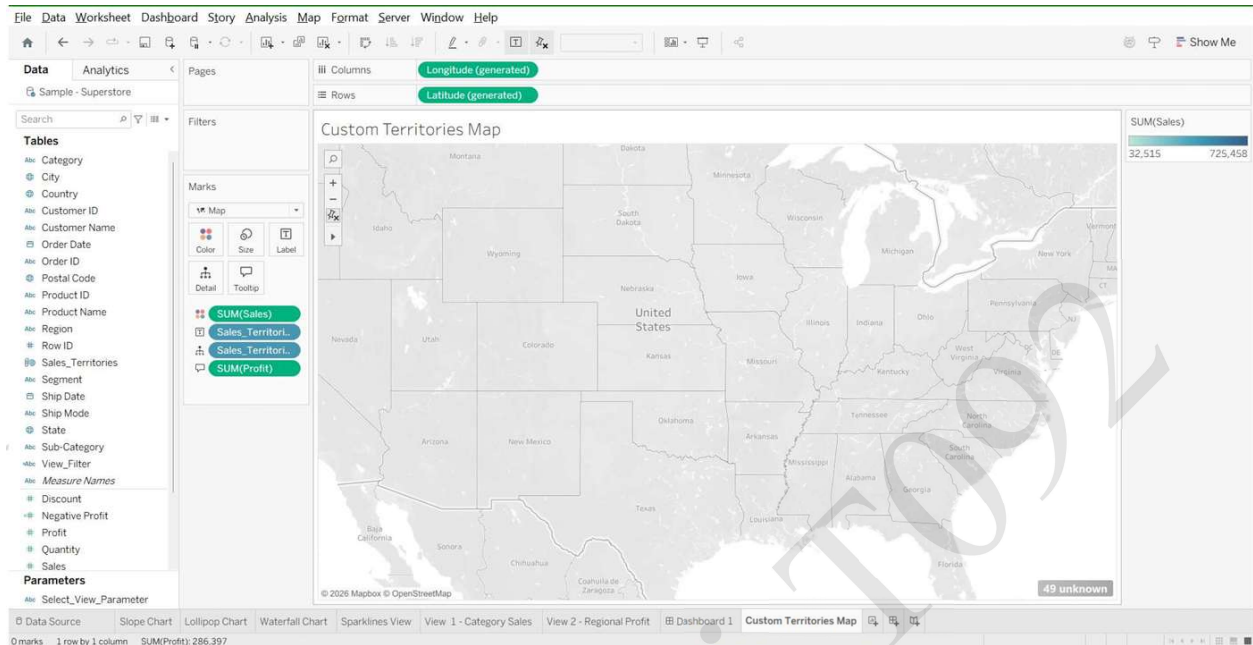

Step 3: Build the Consolidated Territory Map

1. Double-click Sales_Territories in the Data Pane (or drag Latitude (generated) to Rows and Longitude (generated) to Columns, and drag Sales_Territories onto the Detail tile).
2. On the Marks card, change the mark type dropdown from Automatic to Map.
3. Observe the Spatial Fusion:
 - o Tableau merges the internal borders of individual states, rendering 4 cohesive, contiguous regional polygon territories.
4. Drag Sales onto the Color tile on the Marks card.
5. Drag Profit onto the Tooltip tile.
6. Drag Sales_Territories onto the Label tile to display each territory's name centered within its consolidated spatial boundary.

Name :- Vinod Manohar Mali

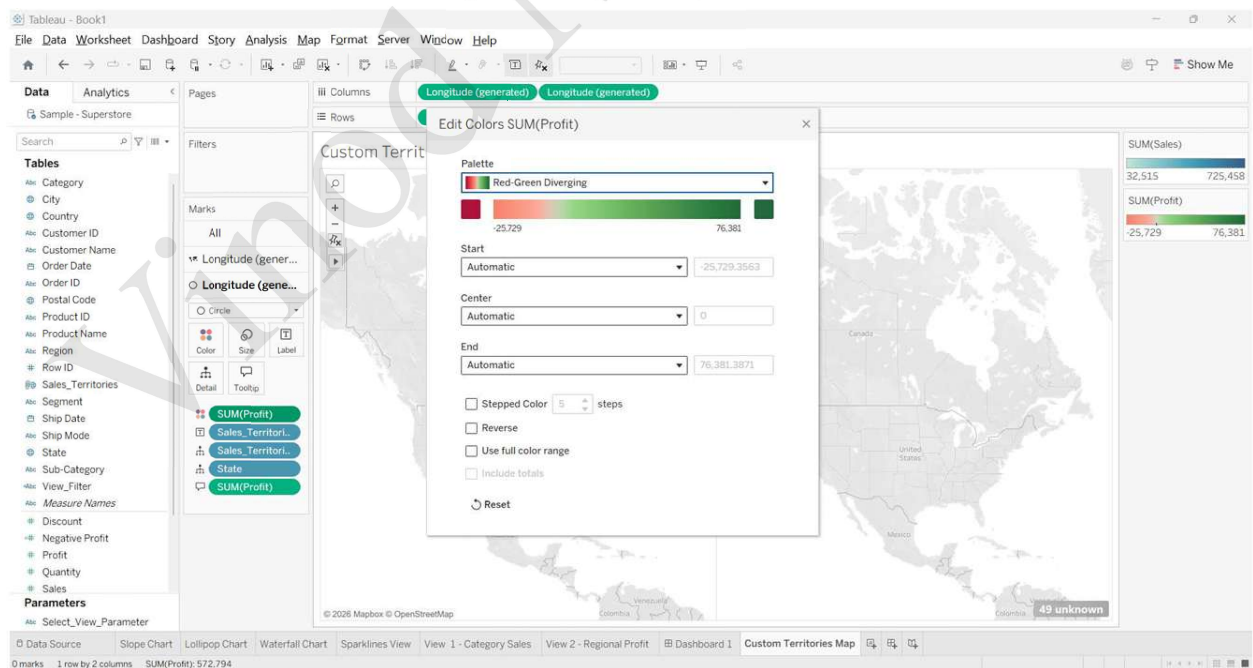

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 4: Compare State Granularity vs. Custom Territory

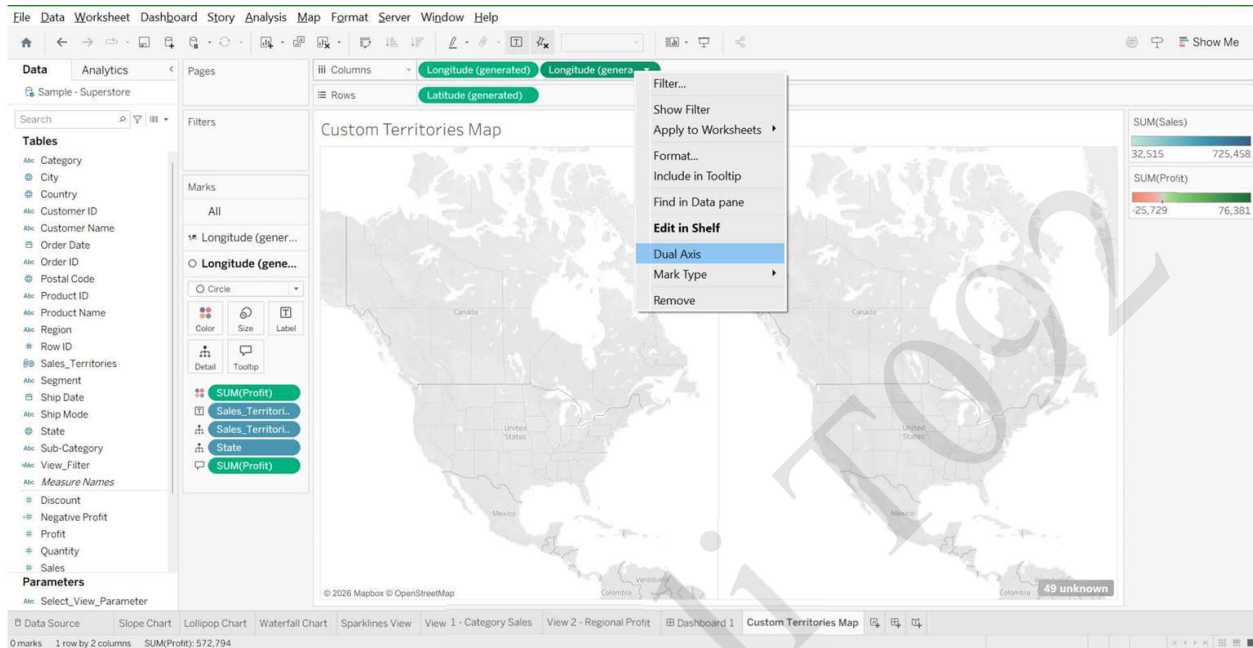

1. Hold Ctrl (or Cmd on Mac) and drag Longitude (generated) on the Columns shelf to create a second copy next to itself (Dual Axis Map).
2. On the second map Marks card:
 - o Drag State onto Detail.
 - o Change mark type to Circle.
 - o Drag Profit onto Color (diverging Red-Green).

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

3. Right-click the second Longitude (generated) pill on Columns --> select Dual Axis.

4. You now have a unified map showing custom territory polygon fills with individual state bubble indicators superimposed over them.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

F: Use Background Images in Dashboards

1. In Tableau Desktop, create a new worksheet named: Store Floor Plan Heatmap.

2. Create the Store_X_Coordinate field:

o Right-click in the Data Pane --> Create Calculated Field....

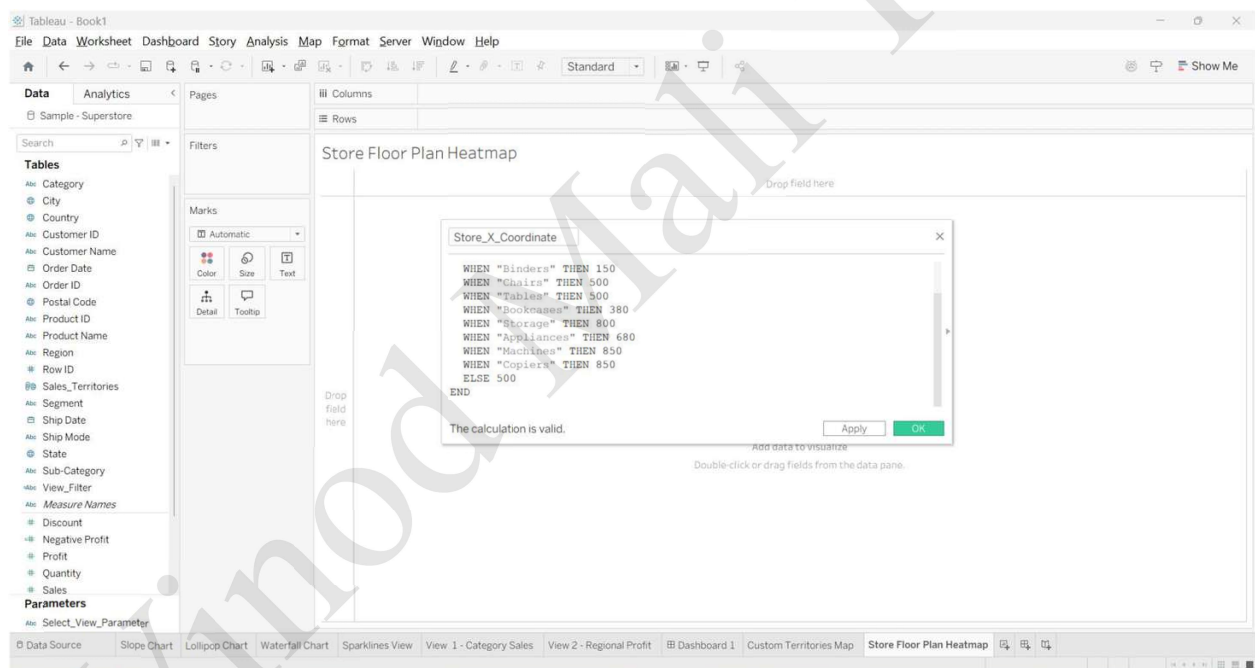

o Field Name: Store_X_Coordinate

o Tableau Formula:

Code snippet

```
CASE [Sub-Category] WHEN "Phones" THEN 150 WHEN "Accessories" THEN  
250 WHEN "Binders" THEN 150 WHEN "Chairs" THEN 500 WHEN "Tables"  
THEN 500 WHEN "Bookcases" THEN 380 WHEN "Storage" THEN 800 WHEN  
"Appliances" THEN 680 WHEN "Machines" THEN 850 WHEN "Copiers" THEN  
850 ELSE 500 END
```

o Click OK.

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

3. Create the Store_Y_Coordinate field:

o Right-click in the Data Pane --> Create Calculated Field....

o Field Name: Store_Y_Coordinate

o Tableau Formula:

Code snippet

CASE [Sub-Category]

WHEN "Phones" THEN 480

WHEN "Accessories" THEN 360

WHEN "Binders" THEN 200

WHEN "Chairs" THEN 480

WHEN "Tables" THEN 200

WHEN "Bookcases" THEN 100

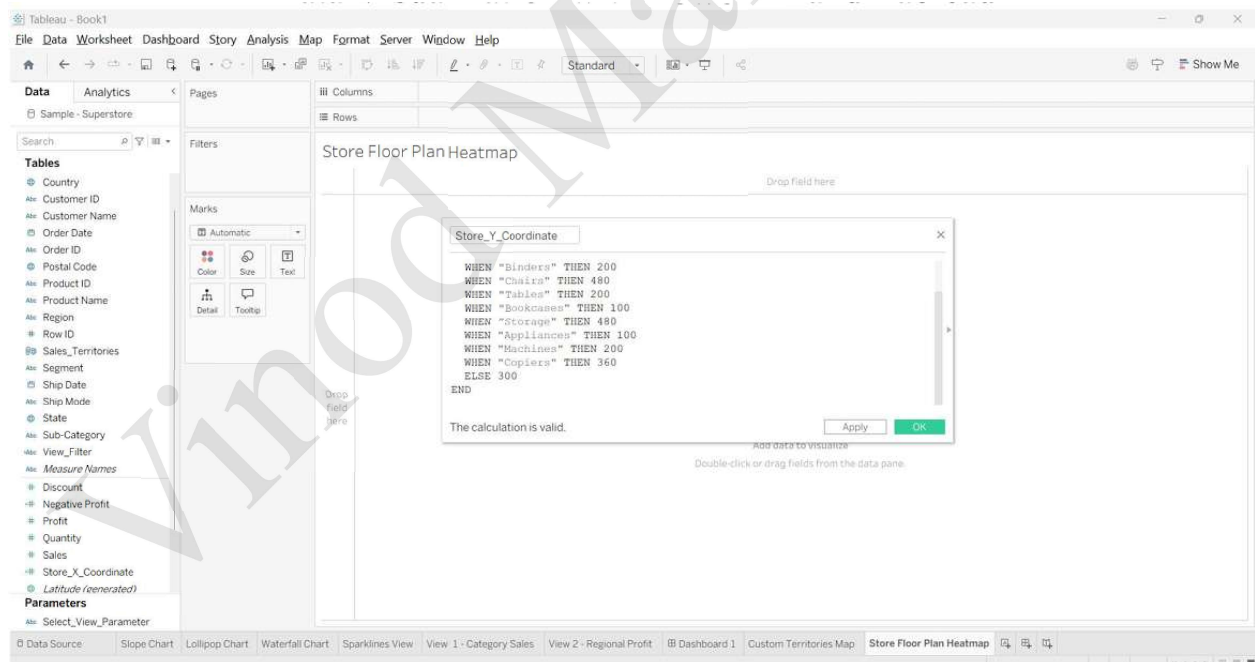

WHEN "Storage" THEN 480

WHEN "Appliances" THEN 100

WHEN "Machines" THEN 200

WHEN "Copiers" THEN 360 ELSE 300 END

o Click OK.

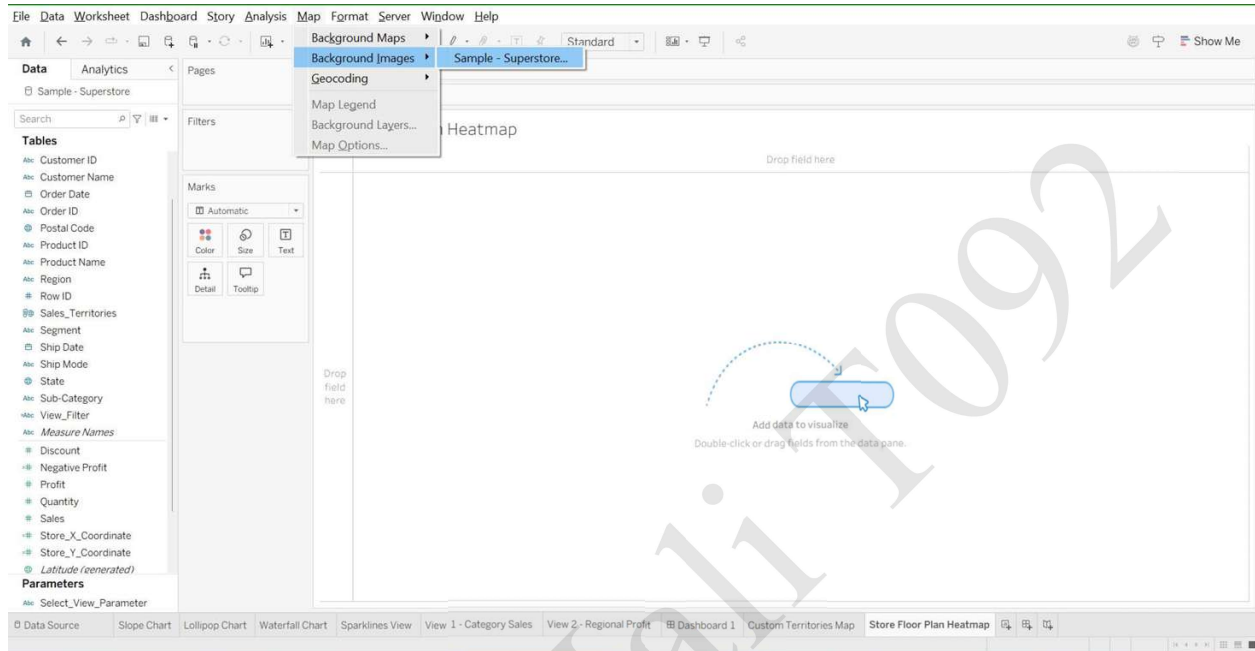

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 2: Configure the Custom Background Image in Tableau

1. Go to the top application menu: select Map --> Background Images --> select Superstore (your data source).

. In the Background Images dialog, click Add Image....

3. In the Add Background Image window:

o Name: Retail Floor Plan

o File or URL: Click Browse and select any image file of a floor plan / blueprint on your machine (or use a placeholder rectangle/grid image).

o X Field (Horizontal axis):

Field: Select Store_X_Coordinate

Left: 0

Right: 1000

o Y Field (Vertical axis):

Field: Select Store_Y_Coordinate

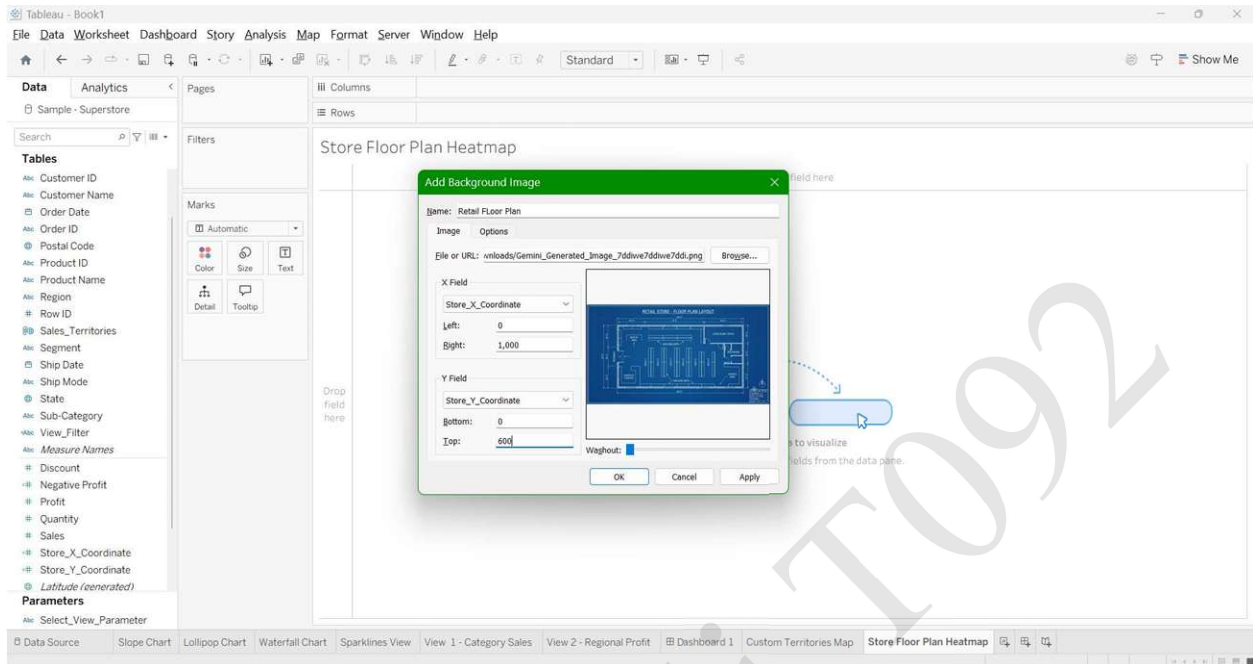

Bottom: 0

Top: 600

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

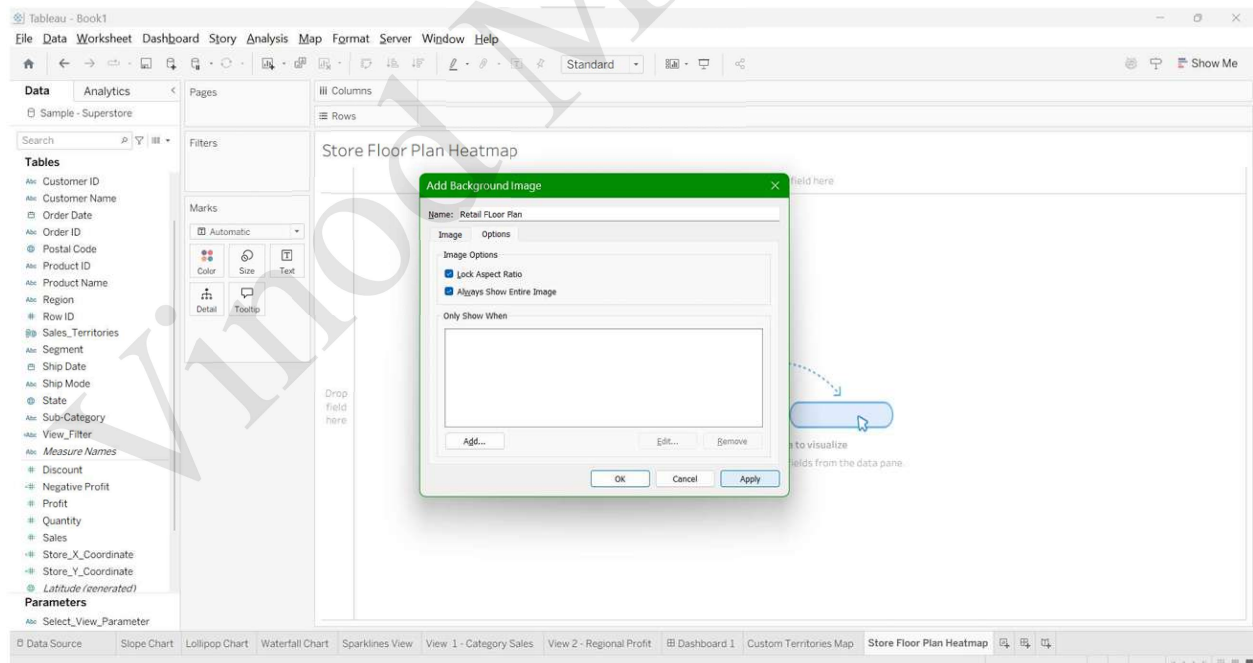

4. Click the Options tab:

o Check Lock Aspect Ratio.

o Check Always Show Entire Image.

5. Click OK, then click OK again to close the window.

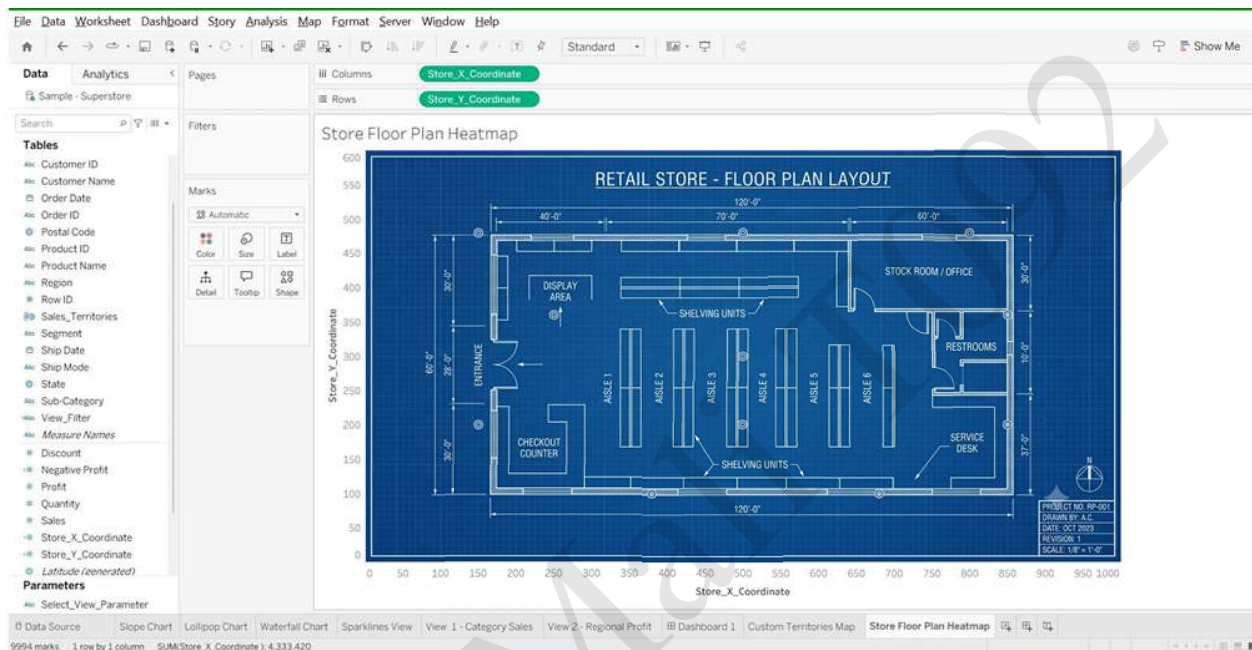

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 3: Build the Floor Plan Spatial Visualization

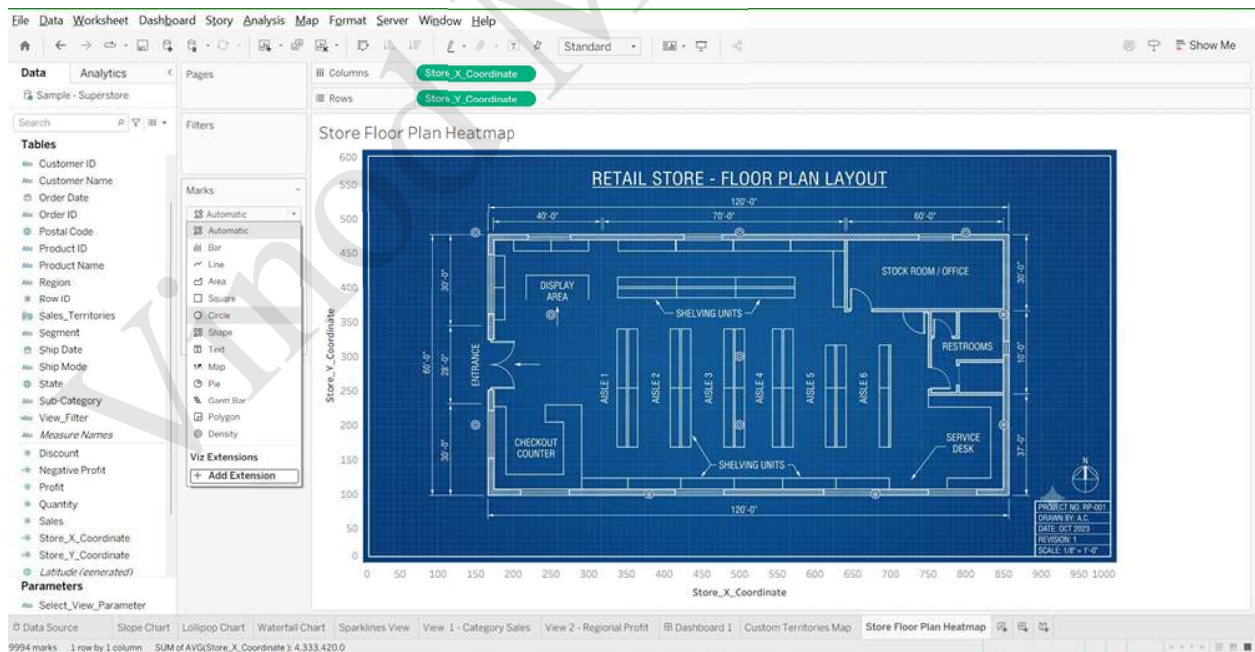

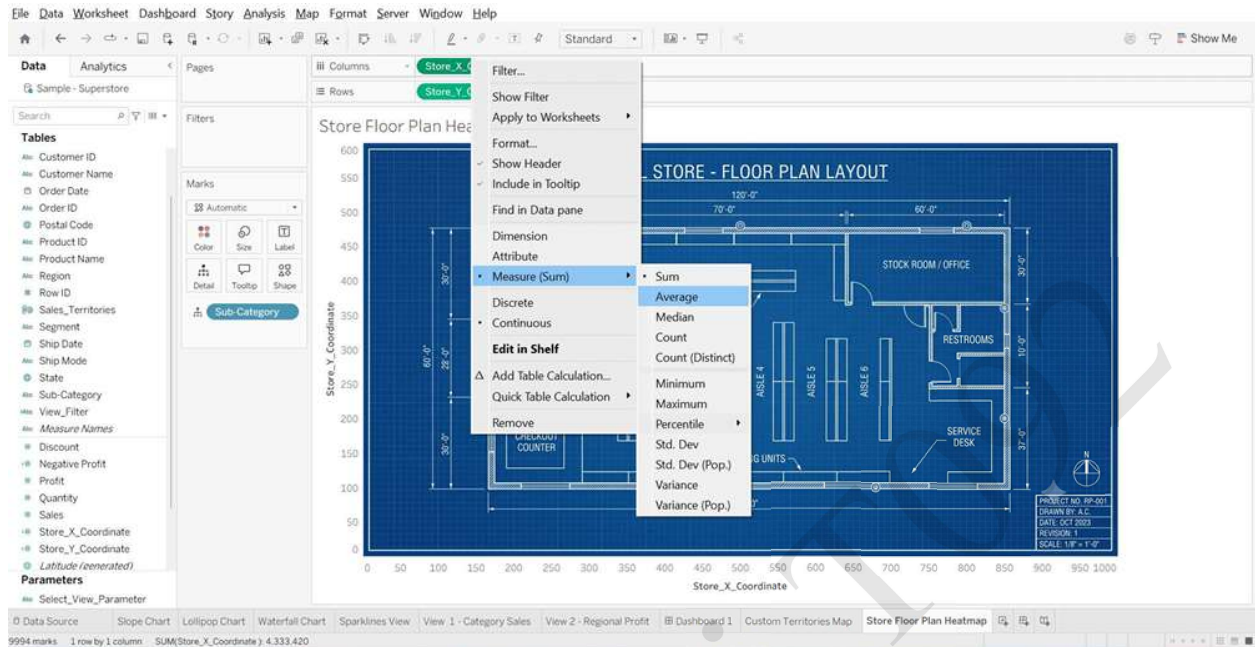

- 1. Drag Store_X_Coordinate onto the Columns shelf.**
- 2. Drag Store_Y_Coordinate onto the Rows shelf.**
- 3. Notice: Tableau immediately renders your custom image as the background canvas!,if not click on analysis and uncheck aggregate**

- 4. Ensure both coordinate pills are aggregated or treated properly:**
 - o Right-click SUM(Store_X_Coordinate) on Columns --> select Dimension (or keep as AVG).**

Name :- Vinod Manohar Mali
Roll no :- T092

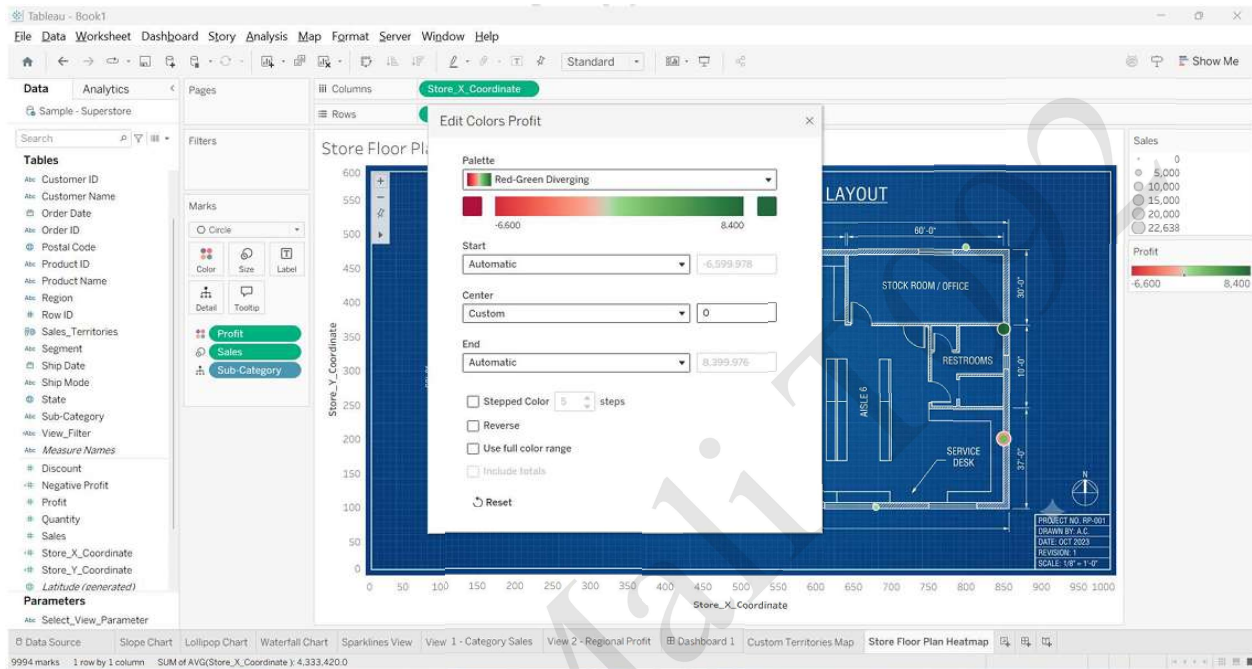

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

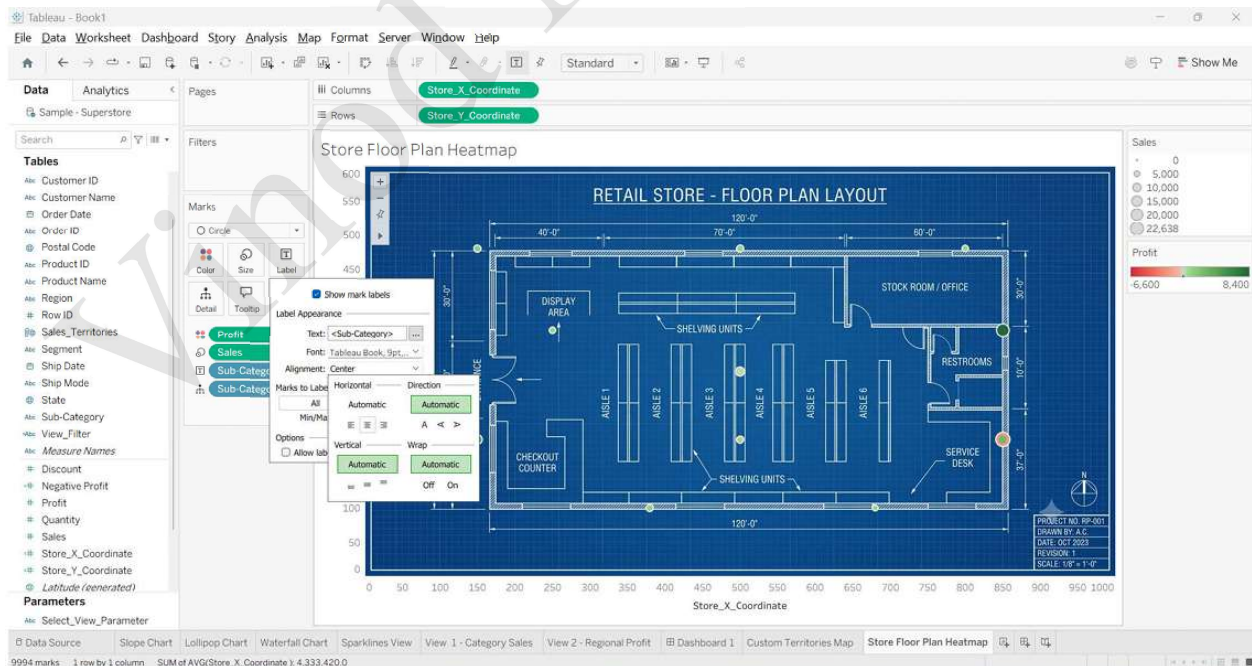

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

2. Drag Sales onto the Size tile (so higher sales departments appear as larger footprint zones).

3. Drag Profit onto the Color tile: o Set color palette to Red-Green Diverging (Center = 0).

4. Drag Sub-Category onto the Label tile --> check Show mark labels --> set alignment to Bottom Center.

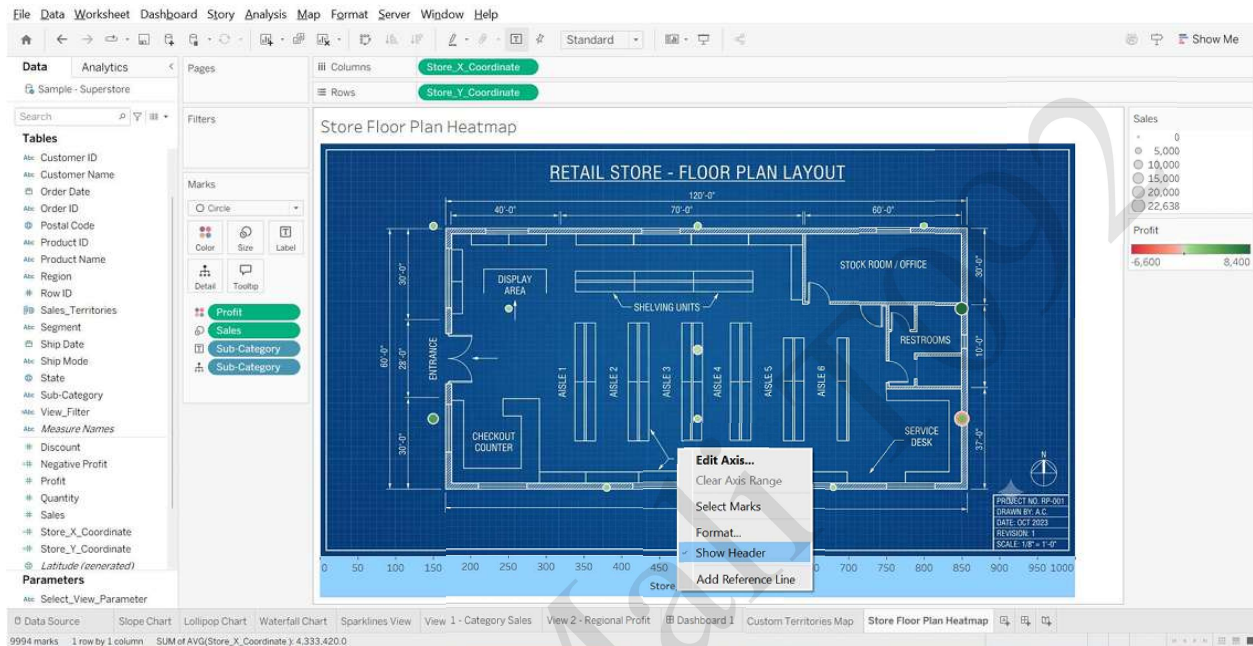

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

5. Clean the Canvas:

- o Right-click the X-axis (Store_X_Coordinate) --> uncheck Show Header.
- o Right-click the Y-axis (Store_Y_Coordinate) --> uncheck Show Header.
- o Format grid lines to None.

G: Apply Animation and Transparency Techniques

Task 1: Create an Animated Motion Chart (Pages Shelf)

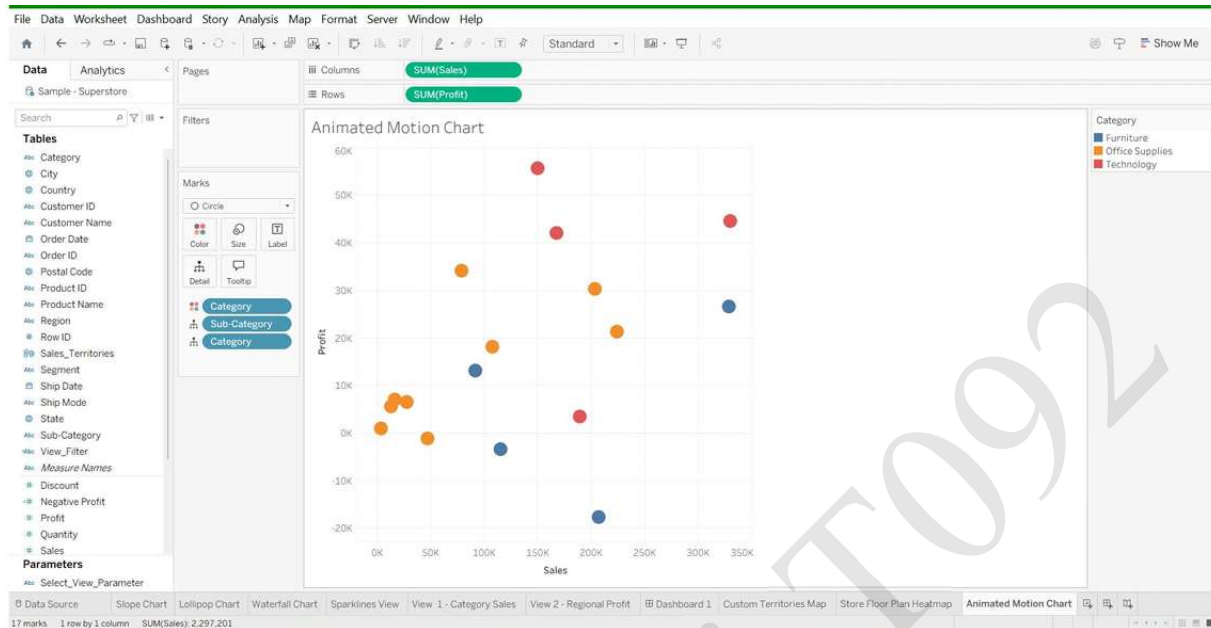

Step 1: Set Up the Scatter Plot Worksheet

1. In Tableau Desktop, create a new worksheet named: Animated Motion Chart.
2. Drag Sales onto the Columns shelf (SUM(Sales)).
3. Drag Profit onto the Rows shelf (SUM(Profit)).
4. Drag Sub-Category onto the Detail tile and Color tile on the Marks card.
5. Drag Category onto the Shape tile (optional, for visual distinction).
6. Change mark type to Circle and adjust the Size slider slightly upward for visibility.

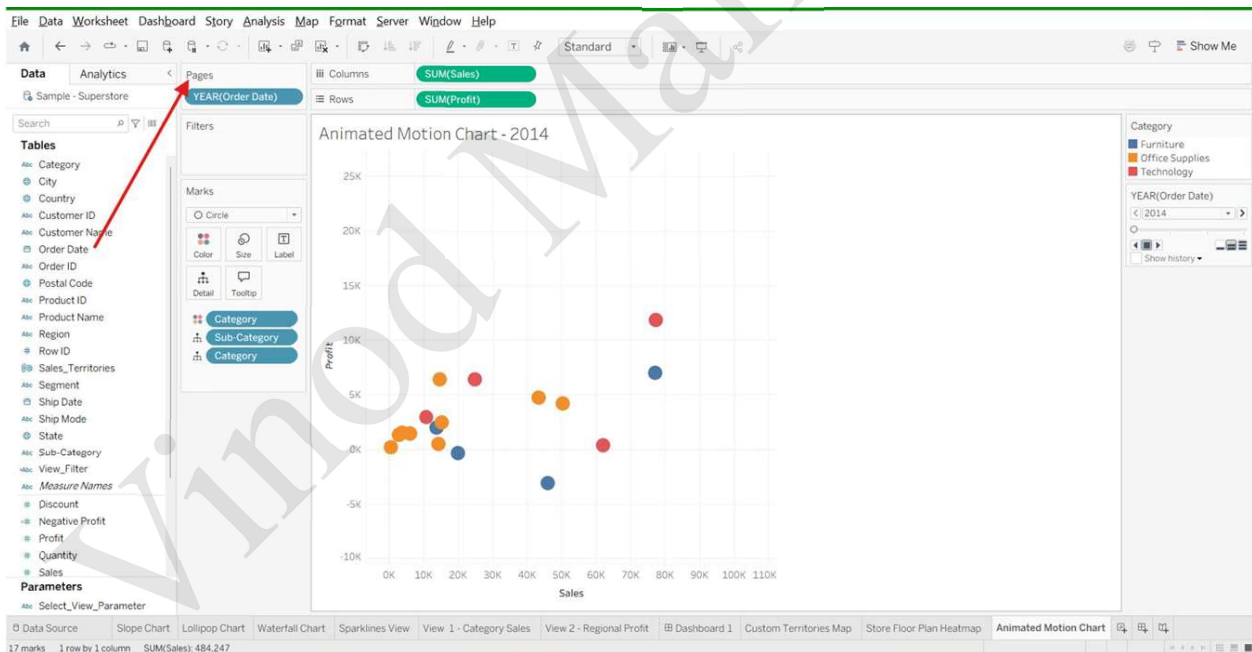

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

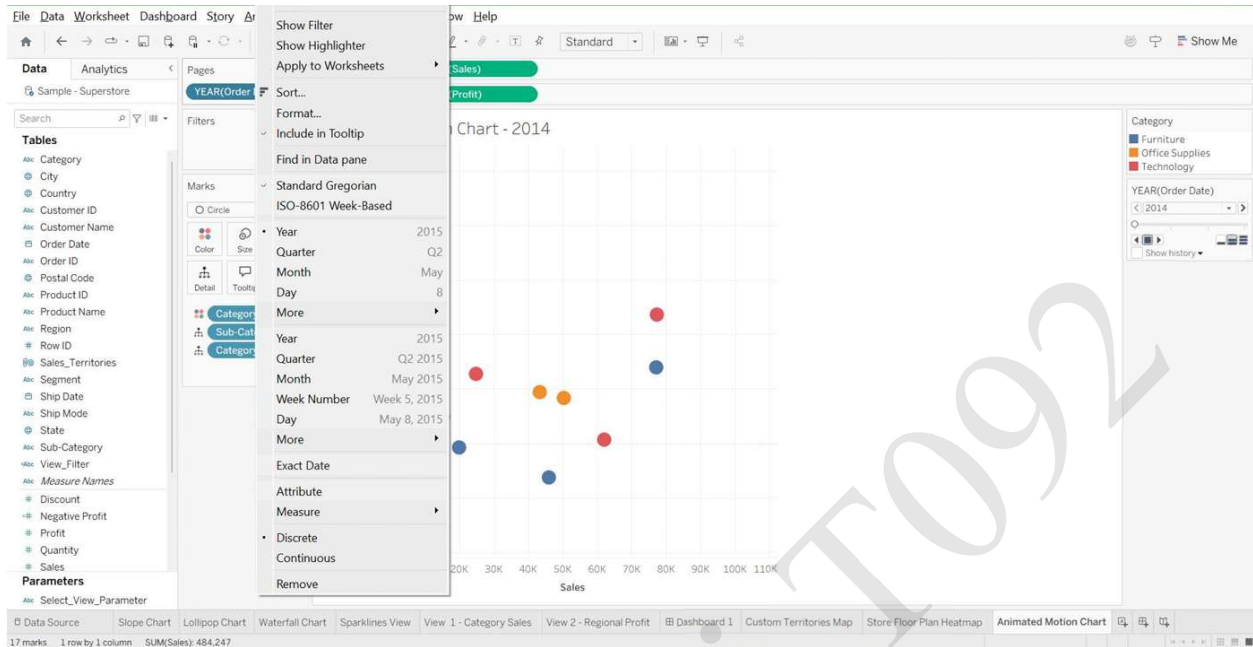

Step 2: Add Time to the Pages Shelf 1. Drag Order Date onto the Pages shelf (located directly above the Filters shelf).

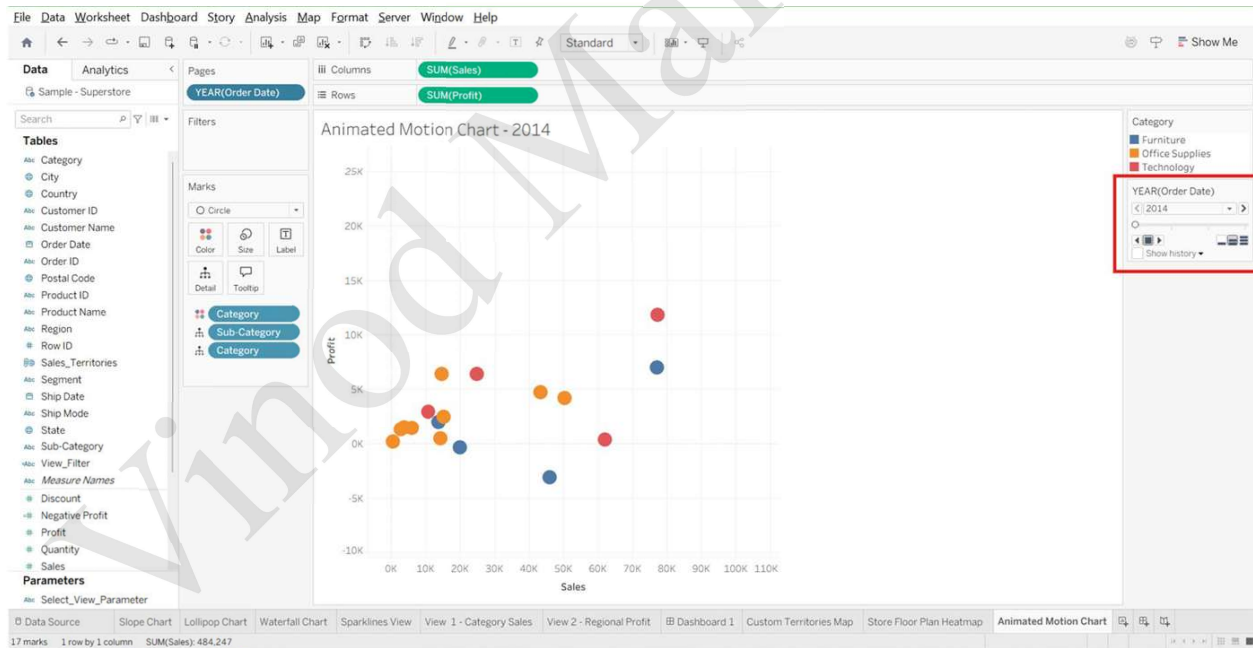

2. Right-click the Order Date pill on the Pages shelf --> select Year (discrete YEAR(Order Date)). Tableau may have selected it by default

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

3. A Pages Control Player will appear on the right side of the canvas with Play, Pause, and Speed controls.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science

Subject :- Data visualization with Power BI & Tableau

Practical No 11

Step 3: Enable Motion History and Trails

1. On the Pages Control panel on the right:

- o Check the box for Show History.**

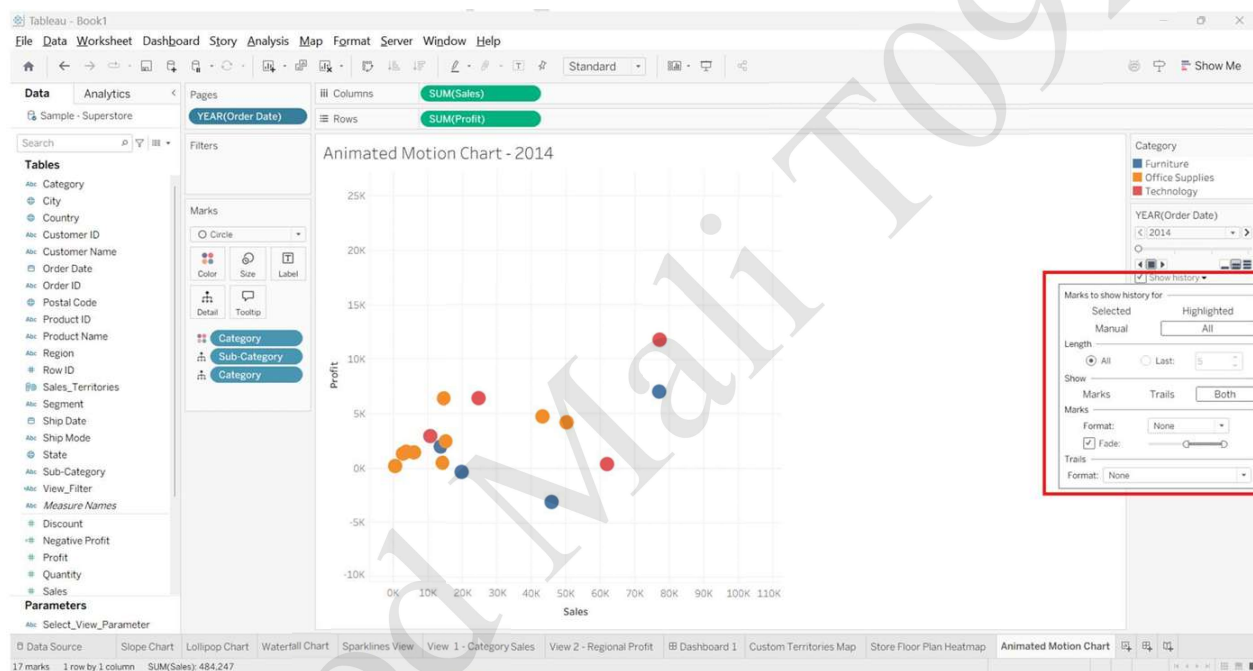

- o Click the dropdown arrow next to Show History to configure animation trail settings:**

Marks to show history for: Select All.

Show: Select Both (Marks and Trails).

Color: Choose a subtle faded trail color.

Fade: Set to 50%.

2. Play the Animation:

- o Set playback speed to medium (\blacktriangleright\blacktriangleright).

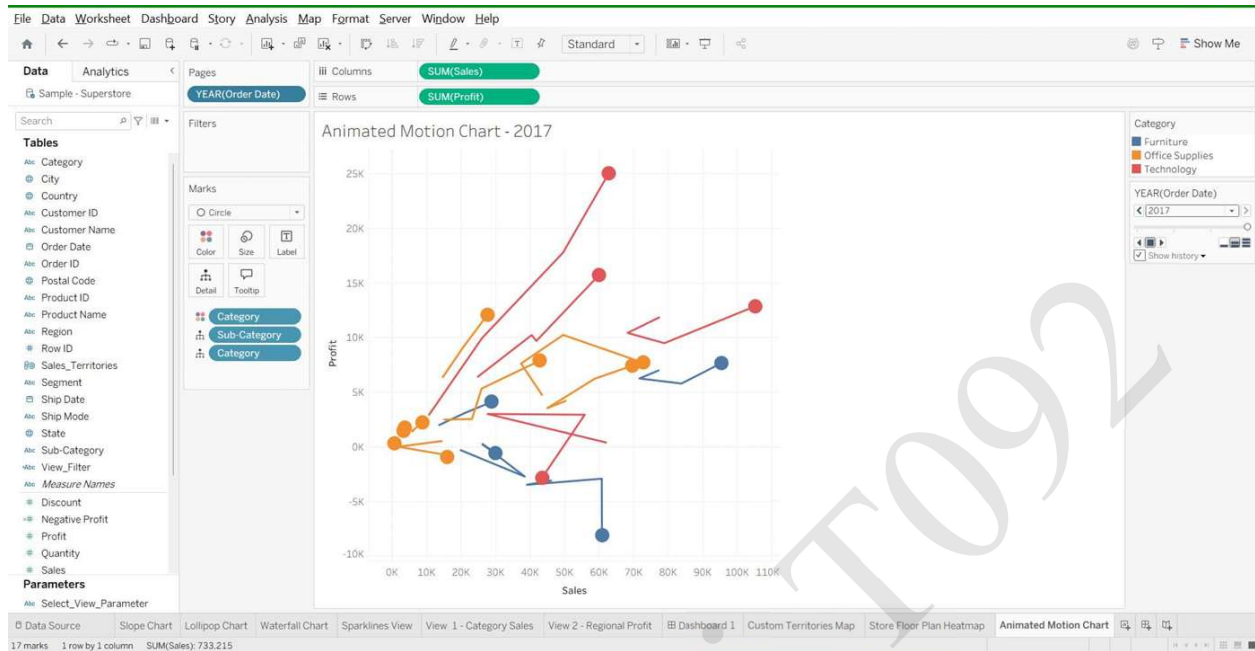

- o Click the Play button (\blacktriangleright).**

- o Observe: Circles glide across the Sales/Profit coordinate space, leaving persistent trajectory lines showing YoY growth and margin acceleration.**

Name :- Vinod Manohar Mali

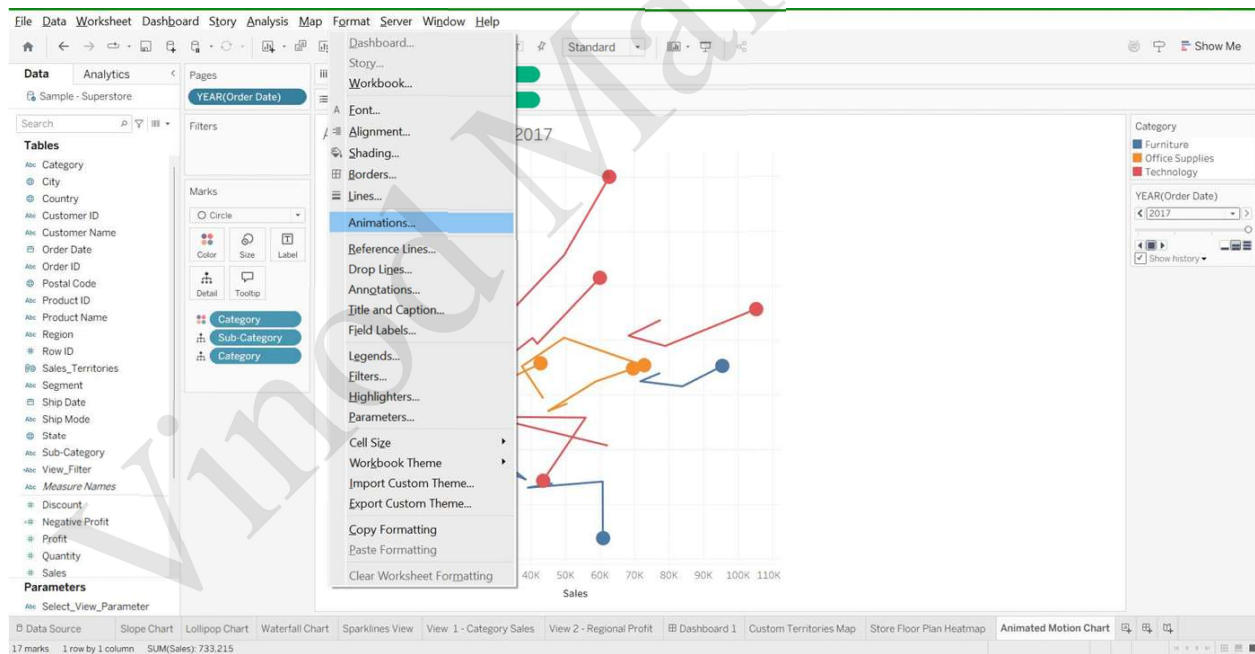

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Step 4: Enable Built-in Tableau Client Animations

1. From the top application menu bar, select Format --> Animations....

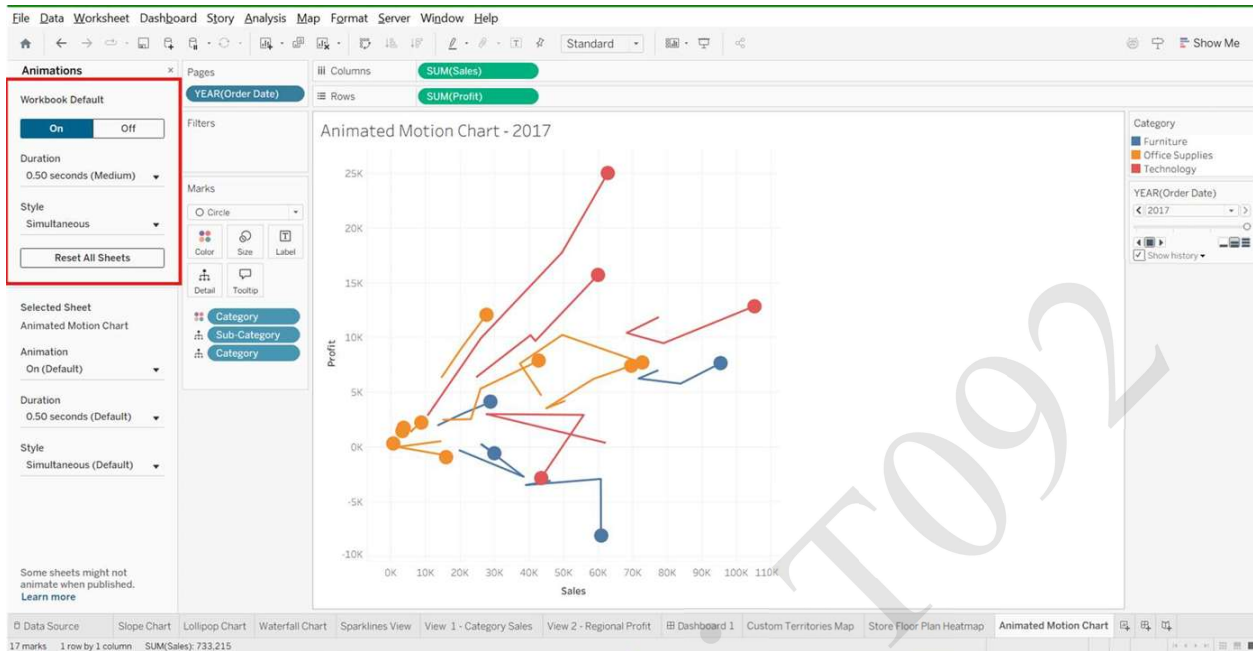

2. In the left-hand Animations pane:

- o Set Workbook Default to On.
- o Set Duration to 1.00 seconds (Slow) or 0.50 seconds (Medium).
- o Set Style to Simultaneous.

Name :- Vinod Manohar Mali

Roll no :- T092

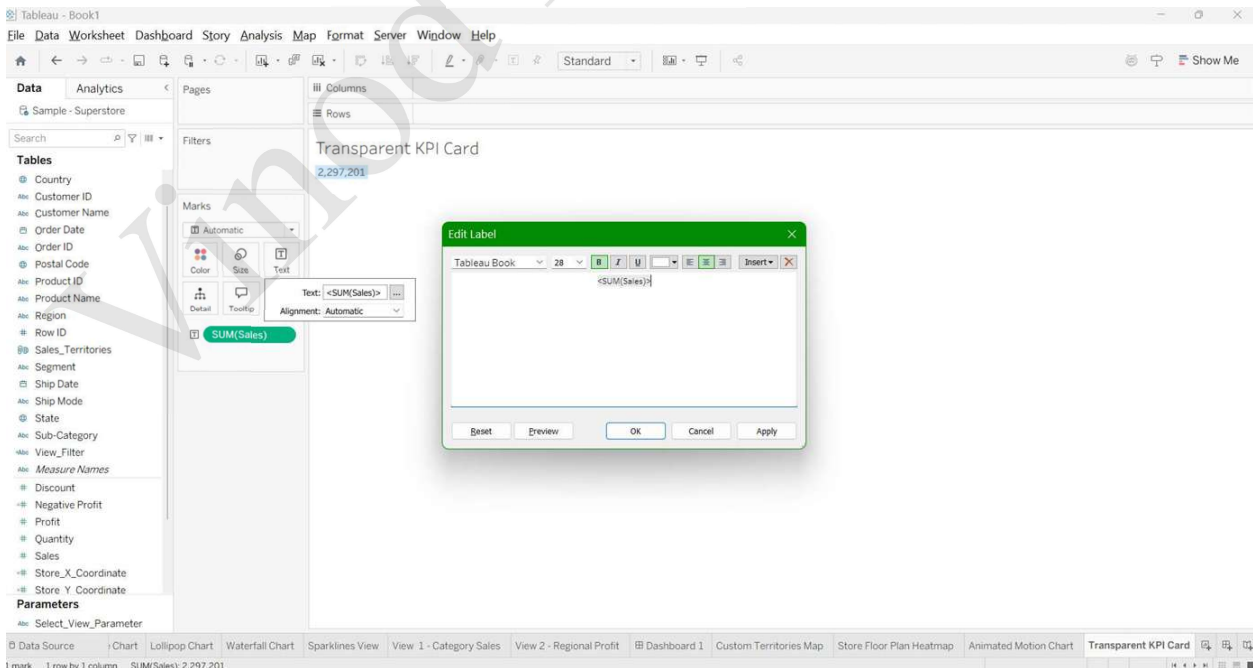

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

Task 2: Apply Sheet and Dashboard Transparency

Step 1: Build a Transparent KPI Card Worksheet

1. Create a new worksheet named: Transparent KPI Card.
2. Drag Sales onto the Text tile on the Marks card.
3. Click Text --> increase font size to 28pt Bold and set font color to white (#FFFFFF).

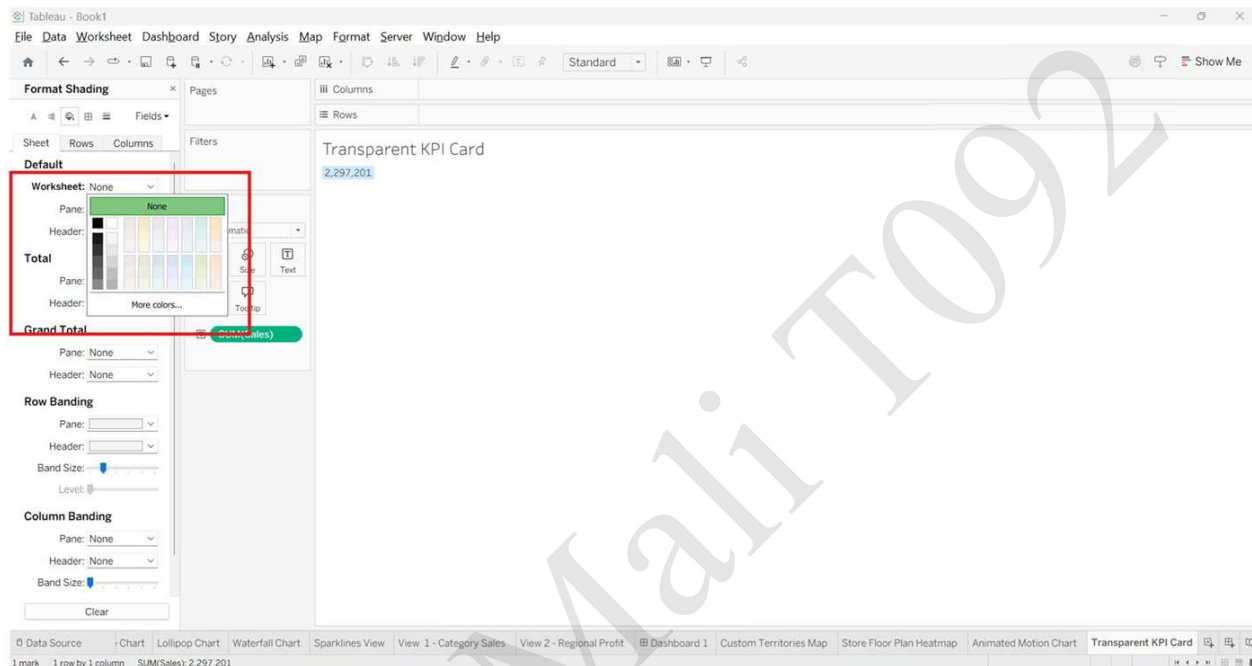

Name :- Vinod Manohar Mali

Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

4. Set worksheet background to 100% Transparent:

- o From the top menu, select Format --> Shading....
- o In the Format Shading pane on the left, under Worksheet, set the color dropdown to None (transparent).
- o Under Pane, set to None.

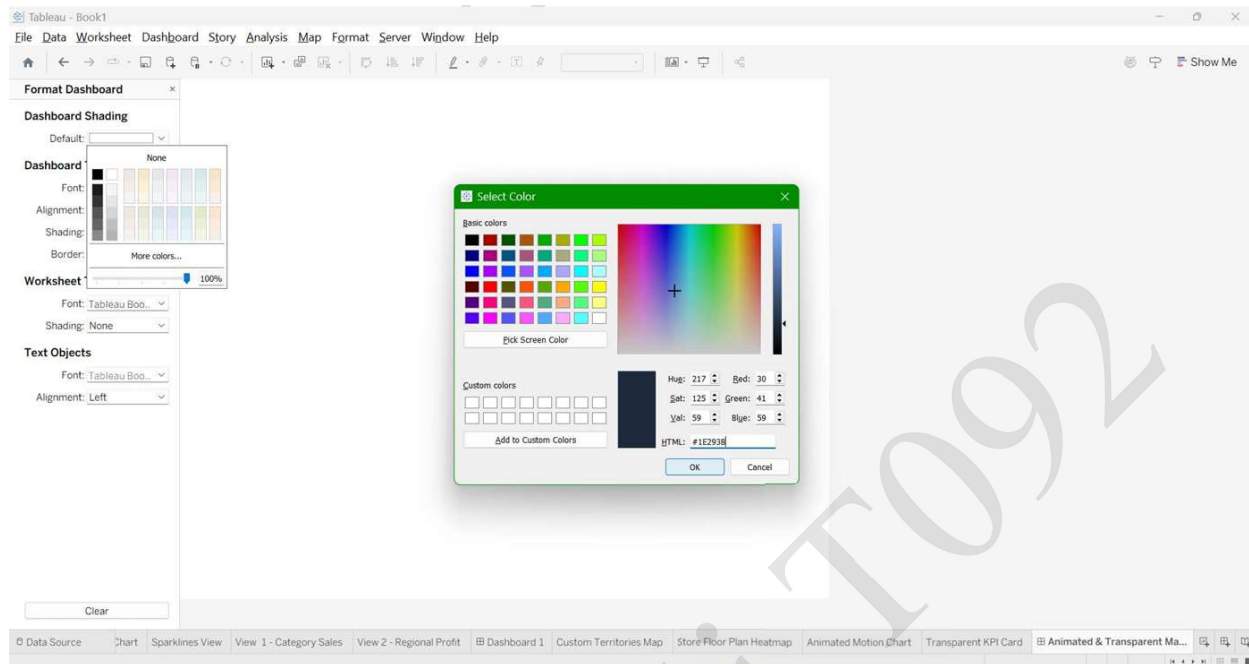

Step 2: Assemble the Transparent Layered Dashboard

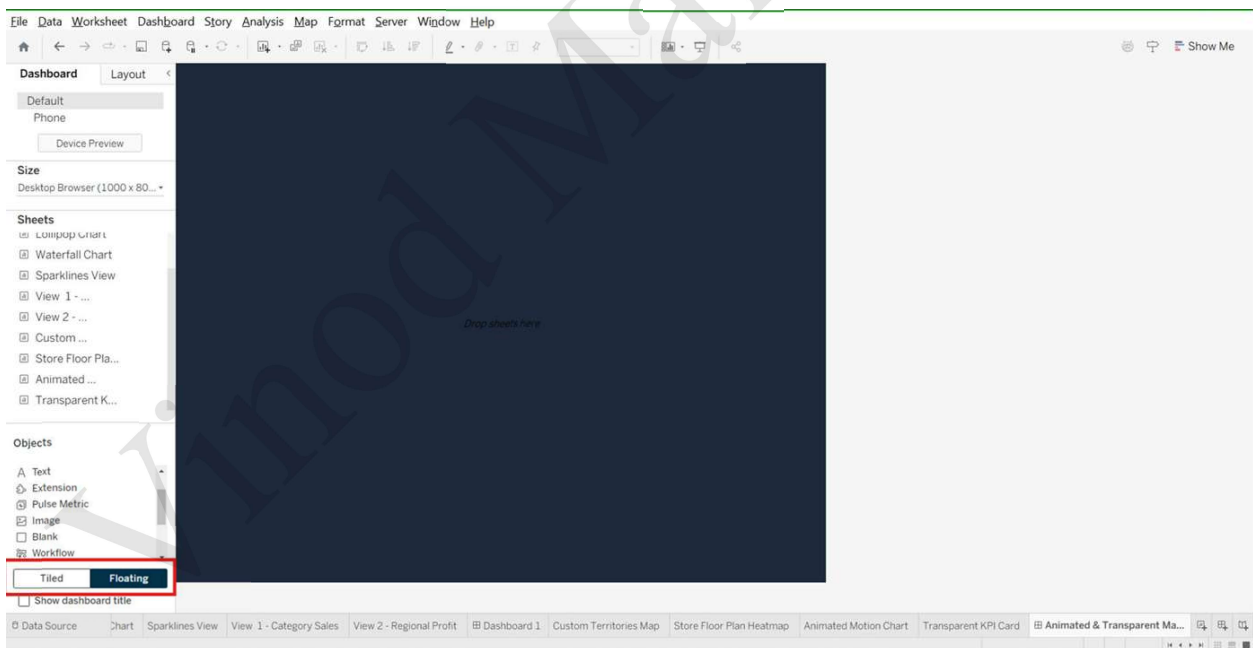

1. Create a new Dashboard and name it: Animated & Transparent Master View.
2. Under Dashboard properties, set the background color:
 - o Select Format --> Dashboard... --> set Dashboard Shading to a deep navy or dark slate color (e.g., #1E293B).

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

- 3. In the Objects section on the left:**
o Select the Floating radio button (instead of Tiled).

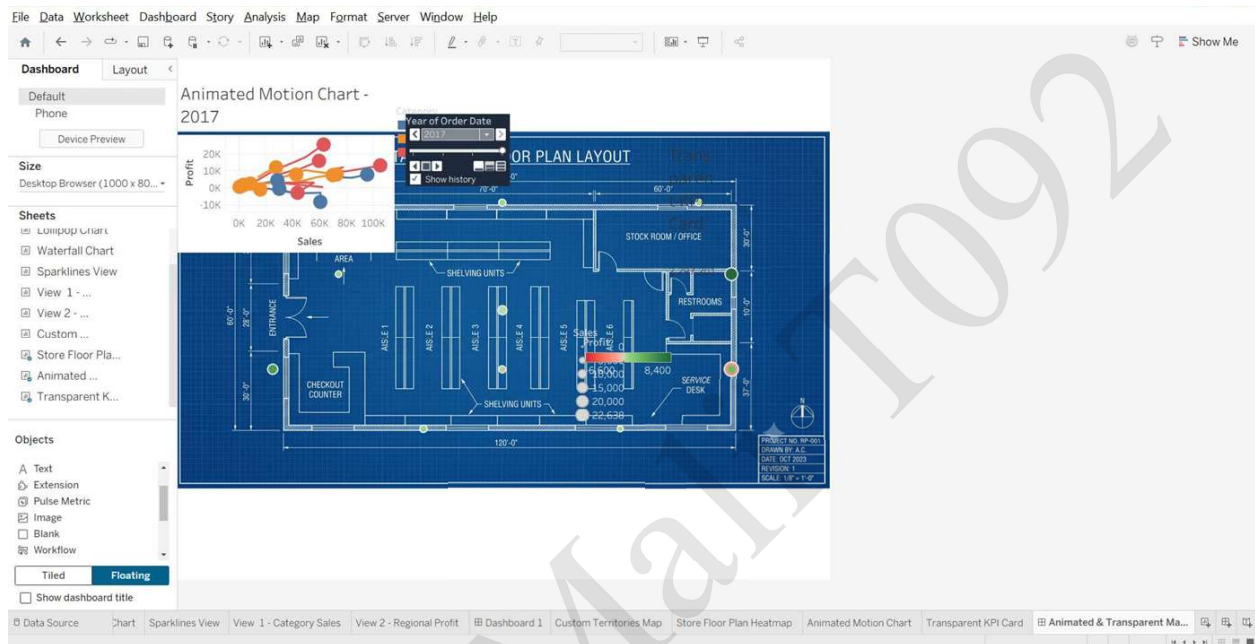

- 4. Drag your Store Floor Plan Heatmap (or Custom Territories Map) onto the dashboard canvas as the base background layer and resize it to fill the screen.**
5. Drag your Transparent KPI Card onto the canvas as a Floating object directly over the map/image.

Name :- Vinod Manohar Mali
Roll no :- T092

Sheth L.U.J & Sir M.V College Of Science
Subject :- Data visualization with Power BI & Tableau
Practical No 11

o Notice: Because the KPI worksheet shading was set to None, the underlying map/floorplan graphic remains 100% visible through the text card without any white rectangular box.

6. Drag your Animated Motion Chart onto the dashboard as a floating panel to complete the interactive control deck.

Name :- Vinod Manohar Mali
Roll no :- T092
